CLAVISTER®

Setting up the W20

1. Connection

- Insert one end of an Ethernet cable into port G1 **1**. Insert the other end into a separate management computer capable of web browsing.
- Insert another Ethernet cable into port G2 **2**. Insert the other end into a router or DSL modem connected to the Internet.

2. Configure the Workstation Interface

Port G1 on the W20 has its default IP address set to 192.168.1.1. Configure the management computer IP address to be 192.168.1.10.

3. Start the Security Gateway

Apply power by plugging the power cable into the back of the W20 and turning on the power switch which is also on the back **3**. Using a third-party surge protector with the power supply is a recommended precaution.

4. Connect to the W20 User Interface

Approximately 40 seconds after power up, the W20 system will have fully started.

From a web browser on the management computer, browse to **https://192.168.1.1**. The system uses a self-signed SSL certificate so you must accept this in the browser if it blocks access.

5. Log into the W20 Web User Interface

Browsing to the W20 will bring up a login dialog page. Enter the username **admin** and the password **admin** to gain access to the system. For security, the password should be changed before deployment in a live network environment.

Authentication required

Username:

Password:

Language:

6. Register at www.clavister.com user account

This is a mandatory requirement for all new customers and needs to be done only once. If registration is not done before starting the cOS Core Setup Wizard, the wizard will provide a link back to the registration page.

If you already have an active Clavister customer account, skip to step **7**.

Open a web browser, surf to <http://www.clavister.com> and select **Log in**.

At the login page, press the **Register** button and fill in all the required information to create you account. For more detailed information, see step **9**, “Need More Help?”

7. Using the Setup Wizard

The first time the web interface is accessed, the Setup Wizard window will appear. The wizard will take you through the essential steps for initial configuration and connection to the internet.

Note: If popup blocking is enabled in the browser, the setup wizard window must be explicitly allowed. The setup wizard is also accessible via the web interface toolbar.

After the wizard completes, you will be returned to the web user interface and can continue with other configuration changes.

Administrator User Settings

Please enter a password for protecting the administrative interface of the unit.

Username:

Password:

Confirm Password:

8. Activating a License

The last step in the wizard is to register the unit and to activate a valid license, which is fetched automatically from Clavister servers.

Internet access must have been set up in previous wizard steps for this option to function. If the device is not connected to the Internet, see section 9, "Need More Help?".

The only input required is the username and password for the Clavister user account that is to be associated with the new product.

License Activation

To activate this unit and automatically download the license file, please enter username and password for your Clavister website account.

Username:

Password:

If you don't have a registered Clavister website account, please [click here](#) to sign up now. When the registration is finished, please enter your credentials above. License activation needs your Security Gateway to have Internet access. If you do not have Internet access at the moment or like to manually install the license file, click "Skip Activation".

Please note that without a license file the unit will operate in demo mode for two hours and then shut down.

The wizard will ask if a reconfigure or restart operation should be performed. Choose restart to fully activate all the license parameters.

9. Need More Help?

For more information on how to register your product, see the "Registering with Clavister" and "License Installation Methods" sections in the separate and more detailed W20 Getting Starting Guide.

The Getting Started Guide and other documentation can be downloaded by going to <http://www.clavister.com/start>.
