## Intellectual Property Rights (IPR) Information

### Copyrights

© All rights reserved. This publication contains information that is protected by copyright. No part may be reproduced, transmitted, transcribed, stored in a retrieval system, or translated into any language without written permission from the copyright holders.

### Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows, Windows 95, 98, Me, NT, 2000, XP, Vista, 7, 8 and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

## Safety Instructions and Approval

### Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

### Warranty

We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

### Be a Registered Owner

Web registration is preferred. You can register your Vigor router via <http://www.dayTek.com>.

### Firmware & Tools Updates

Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

## European Community Declarations

Manufacturer: DrayTek Corp.

Address: No. 26, Fu Shing Road, Hukou Township, Hsinchu Industrial Park, Hsinchu County, Taiwan 303

Product: Vigor2132FVn Router

DrayTek Corp. declares that Vigor2132FVn router is in compliance with the following essential requirements and other relevant provisions of R&TTE 1999/5/EC, ErP 2009/125/EC and RoHS 2011/65/EU.

The product conforms to the requirements of Electro-Magnetic Compatibility (EMC) Directive 2004/108/EC by complying with the requirements set forth in EN55022/Class B and EN55024/Class B.

The product conforms to the requirements of Low Voltage (LVD) Directive 2006/95/EC by complying with the requirements set forth in EN60950-1.

This product is designed for 2.4GHz/5GHz WLAN network throughout the EC region.

## Regulatory Information

### Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device may accept any interference received, including interference that may cause undesired operation.

The antenna/transmitter should be kept at least 20 cm away from human body.

More update, please visit [www.draytek.com](http://www.draytek.com).

## Introduction

Note: This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

Vigor2132 Series integrates IP layer QoS, NAT session/bandwidth management to help users control works well with large bandwidth.

The entertainment applications running over the home network infrastructure and home-based productivity for SOHO are growing while the broadband bandwidth is increasingly available within affordable budget along with deployment of FTTx. The fiber WAN port of Vigor2132FVn optimizes the throughput performance and flexibility for time-critical console gaming, multi-media streaming and P2P downloading as well as IP telephony. The four Gigabit Ethernet (10/100/1000 LAN ports) auto-sensing ports facilitate home networking with width-intensive applications! Through the combination of Fiber WAN and Gigabit LAN ports to optimize the bandwidth usage, the downstream data and voice packets for Triple play can be flawlessly displayed in endpoint devices, such as HDTV, desktop/laptop or analog/IP phone.

The Vigor2132FVn/Vac/ac series router gives you not only the 802.11n/ac standards for coverage, but also the time scheduling function to save your energy bill plus reducing the carbon footprint. For wireless security, it is also efficient for wireless network management. For instance, its "Wireless LAN isolation" can easily isolate wireless network for friends or guests. Then, the access rights of various wireless clients can be managed by "MAC address control" and deployed "WEP/WPA/WPA2" authentication. No need to remember passwords, you simply press "WPS" button on router and then enable users to securely connect laptop or computers to the router!

The fiber deployment (for Vigor2132FVn) lets businesses and common people have fatter pipe of accessing global network. DrayTek Vigor2132FVn Fiber Router is developed in compliance with the Super-fast broadband architecture and customized for users which already

have Fiber to the building (FTTB) or Fiber to the home (FTTH). The bandwidth-consumed multimedia streaming and crystal-clear VoIP functionalities are realized through the Vigor2132FVn's upto-1000Mbps (1 Gigabit) WAN throughput and advanced bandwidth management. You can apply the rules of Session Limit, Bandwidth Limit, Port Rate Control, QoS control list, Ports Priority to different traffic type for better efficiency.

By making the most of your broadband line, the VoIP call will be carried to the destination via Internet. So you can save on the telephone bill. Combining the Internet Telephony service from the Internet Telephony Service Provider (ITSP), the Vigor2132FVn charter VoIP calls to be made to any legacy phone numbers, even including mobile and long distance numbers!

In addition, it supports the worldwide standard TR-069 management and customized triple play while most fiber routers could not have the above distinguished features.

## 1.1 Web Configuration Buttons Explanation

Several main buttons appeared on the web pages are defined as the following:

	Save and apply current settings.
	Cancel current settings and recover to the previous saved settings.
	Clear all the selections and parameters settings, including selection from drop-down list. All the values must be reset with factory default settings.
	Add new settings for specified item.
	Edit the settings for the selected item.
	Delete the selected item with the corresponding settings.

**Note:** For the other buttons shown on the web pages, please refer to Chapter 3, 4 for detailed explanation.

## 1.2 LED Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

### 1.2.1 Vigor2132FVn

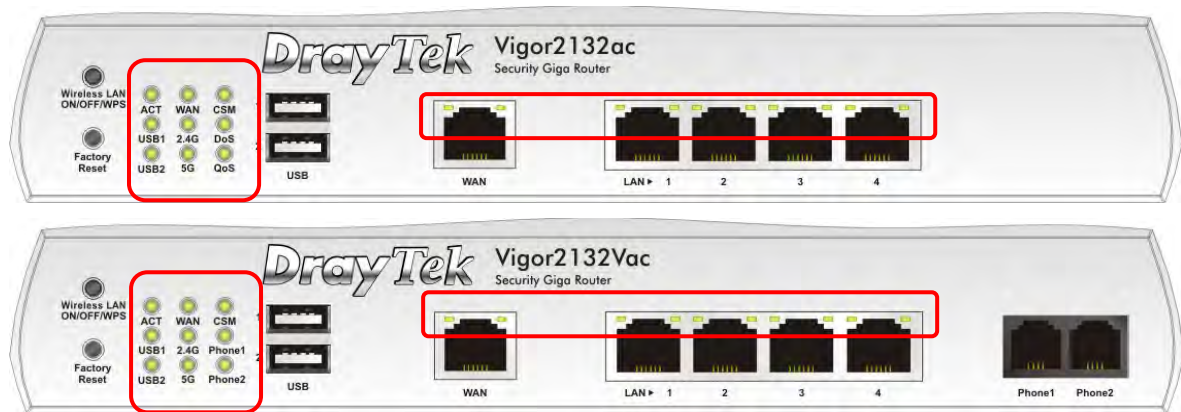

LED	Status	Explanation	
ACT (Activity)	Blinking	The router is powered on and running normally.	
	Off	The router is powered off.	
USB1~ USB2	On	USB device is connected and ready for use.	
	Blinking	The data is transmitting.	
WAN	On	Internet connection is ready.	
	Off	Internet connection is not ready.	
	Blinking	The data is transmitting.	
WLAN	On	Wireless access point is ready.	
	Blinking	It will blink slowly while wireless traffic goes through. ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)	
VPN	On	The VPN tunnel is active.	
Fiber	On	SFP Module is plugged and fiber link is up.	
Phone1~ Phone2	On	The phone connected to this port is off-hook.	
	Off	The phone connected to this port is on-hook.	
	Blinking	A phone call comes.	
LED on Connector			
LAN1~ LAN4	Left LED	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps

Interface	Description
Wireless LAN ON/OFF/WPS	<p>Press the button and release it within 2 seconds. When the wireless function is ready, the green LED will be on.</p> <p>Press the button and release it within 2 seconds to turn off the WLAN function. When the wireless function is not ready, the LED will be off.</p> <p>When WPS function is enabled by web user interface, press this button for more than 2 seconds to wait for client's device making network connection through WPS.</p>
Factory Reset	<p>Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.</p>
USB1~USB2	Connector for a USB device.
WAN	<p>Fiber connection (100Mbps) for accessing the Internet.</p> 
LAN1~LAN4	Connectors for local network devices.
Phone1~ Phone2	Connector for analog phone(s).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.2.2 Vigor2132ac/Vac

LED	Status	Explanation	
ACT (Activity)	Blinking	The router is powered on and running normally.	
	Off	The router is powered off.	
USB1~USB2	On	USB device is connected and ready for use.	
	Blinking	The data is transmitting.	
WAN	On	Internet connection is ready.	
	Off	Internet connection is not ready.	
	Blinking	The data is transmitting.	
2.4G/5G	On	Wireless access point with bandwidth of 2.4GHz/5GHz is ready.	
	Blinking	It will blink slowly while wireless traffic goes through. ACT and WLAN LEDs blink quickly and simultaneously when WPS is working, and will return to normal condition after two minutes. (You need to setup WPS within 2 minutes.)	
CSM	On	The profile(s) of CSM (Content Security Management) for IM/P2P, URL/Web Content Filter application can be enabled from <b>Firewall &gt;&gt;General Setup</b> . (Such profile must be established under <b>CSM</b> menu).	
DoS	On	The DoS function is active.	
	Blinking	It will blink while detecting an attack.	
QoS	On	The QoS function is active.	
Phone1 ~ Phone2	On	The phone connected to this port is off-hook.	
	Off	The phone connected to this port is on-hook.	
	Blinking	A phone call comes.	
<b>LED on Connector</b>			
WAN	Left LED	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps
LAN1~LAN4	Left LED	On	The port is connected.
		Off	The port is disconnected.
		Blinking	The data is transmitting.
	Right LED	On	The port is connected with 1000Mbps.
		Off	The port is connected with 10/100Mbps

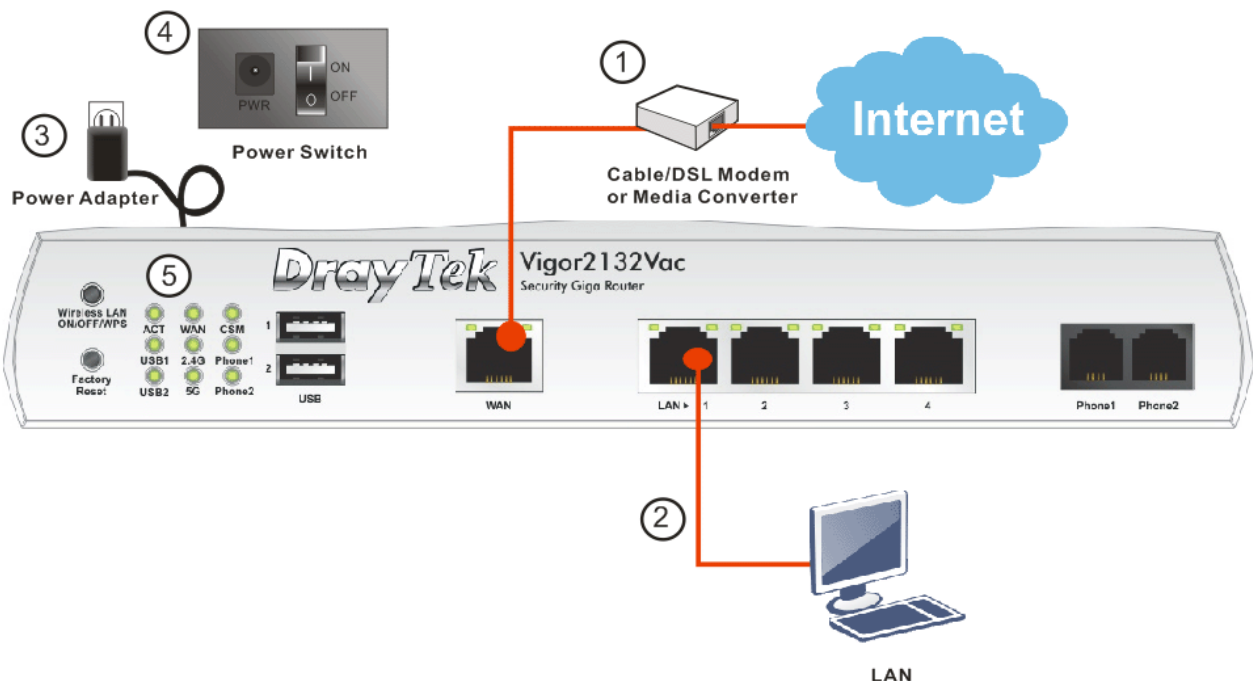

Interface	Description
Wireless LAN ON/OFF/WPS	Press the button and release it within 2 seconds. When the wireless function is ready, the green LED will be on. Press the button and release it within 2 seconds to turn off the WLAN function. When the wireless function is not ready, the LED will be off. When WPS function is enabled by web user interface, press this button for more than 2 seconds to wait for client's device making network connection through WPS.
Factory Reset	Restore the default settings. Usage: Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
USB1~USB2	Connector for a USB device.
WAN	Connector for local network devices or modem for accessing Internet.
LAN1~LAN4	Connectors for local network devices.
Phone1~ Phone2	Connector for analog phone(s).
PWR	Connector for a power adapter.
ON/OFF	Power Switch.

## 1.3 Hardware Installation

Before starting to configure the router, you have to connect your devices correctly. In this section, Vigor2132FVn is taken as an example.

1. Connect the cable Modem/DSL Modem/Media Converter to any WAN port of router with Ethernet cable (RJ-45).
2. Connect one end of an Ethernet cable (RJ-45) to one of the **LAN** ports of the router and the other end of the cable (RJ-45) into the Ethernet port on your computer.
3. Connect one end of the power adapter to the router's power port on the rear panel, and the other side into a wall outlet.
4. Power on the device by pressing down the power switch on the rear panel.
5. The system starts to initiate. After completing the system test, the **ACT** LED will light up and start blinking.

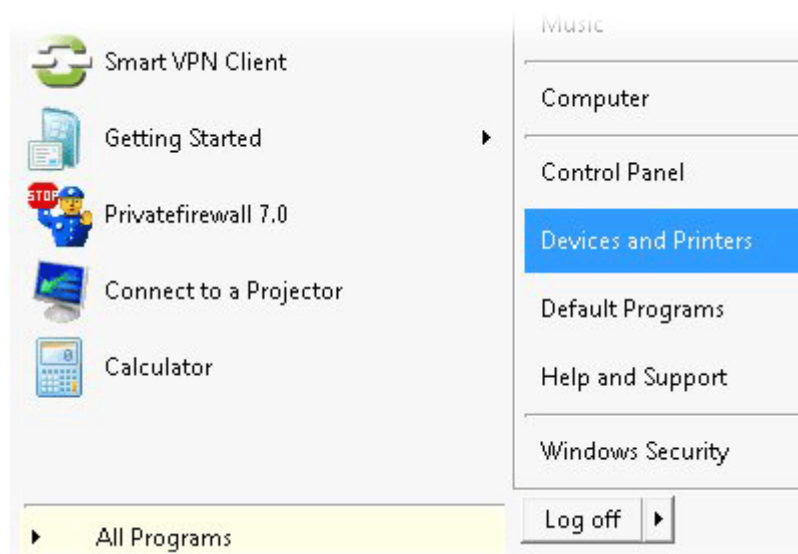

## 1.4 Printer Installation

You can install a printer onto the router for sharing printing. All the PCs connected this router can print documents via the router. The example provided here is made based on Windows 7. For other Windows system, please visit [www.DrayTek.com](http://www.DrayTek.com).

Before using it, please follow the steps below to configure settings for connected computers (or wireless clients).

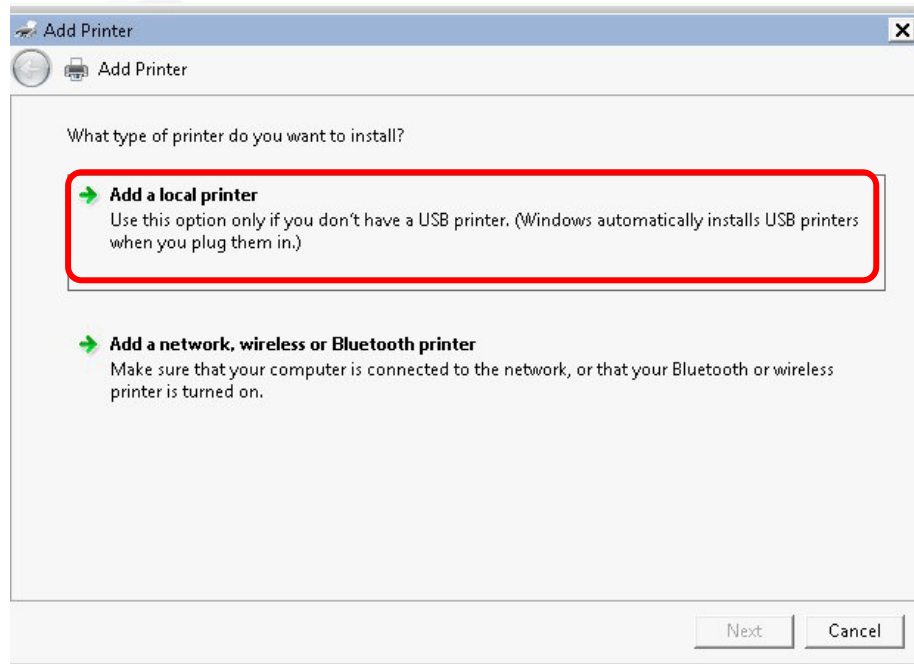

1. Connect the printer with the router through USB/parallel port.
2. Open **All Programs>>Getting Started>>Devices and Printers**.

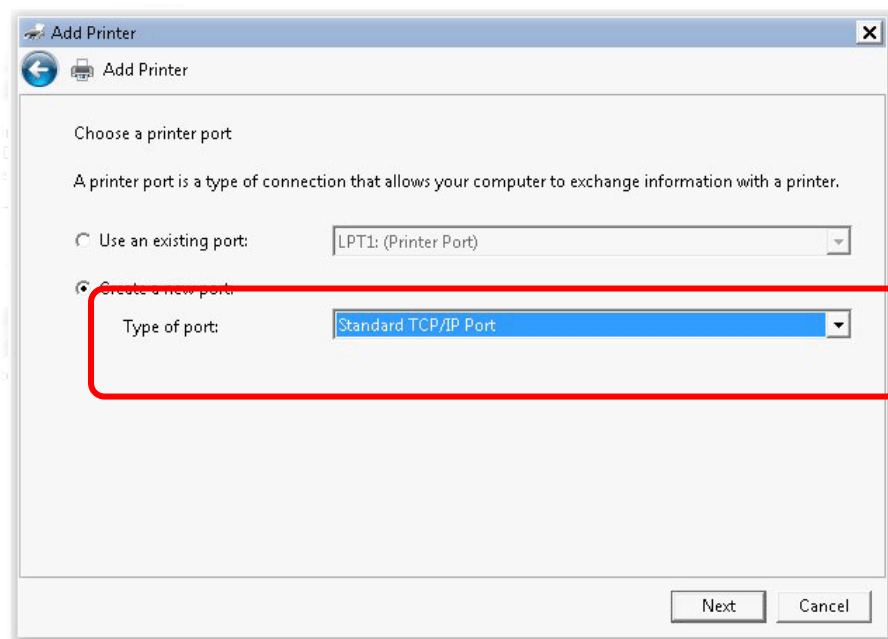

3. Click **Add a printer**.

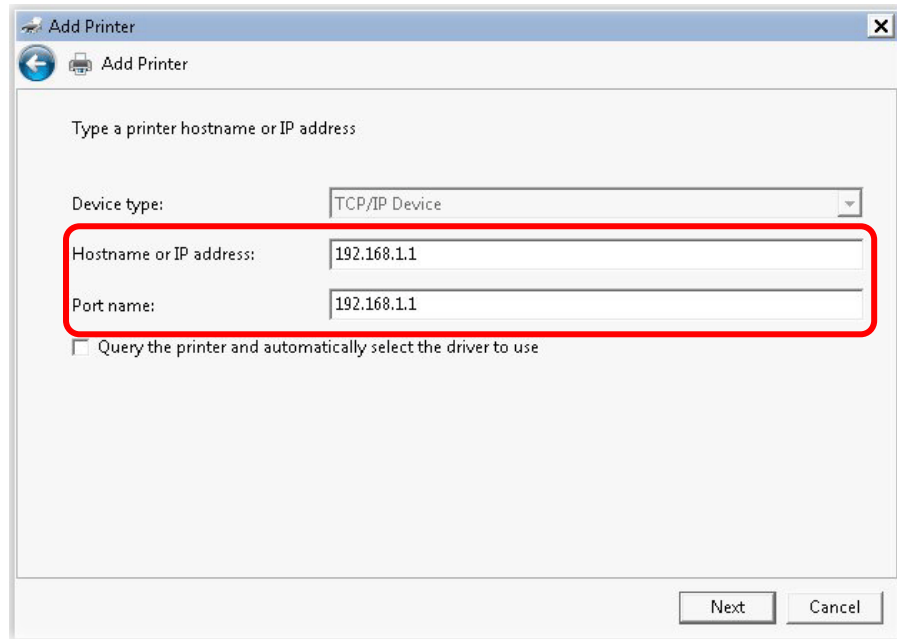

4. A dialog will appear. Click **Add a local printer** and click **Next**.

5. In this dialog, choose **Create a new port**. In the field of **Type of port**, use the drop down list to select **Standard TCP/IP Port**. Then, click **Next**.

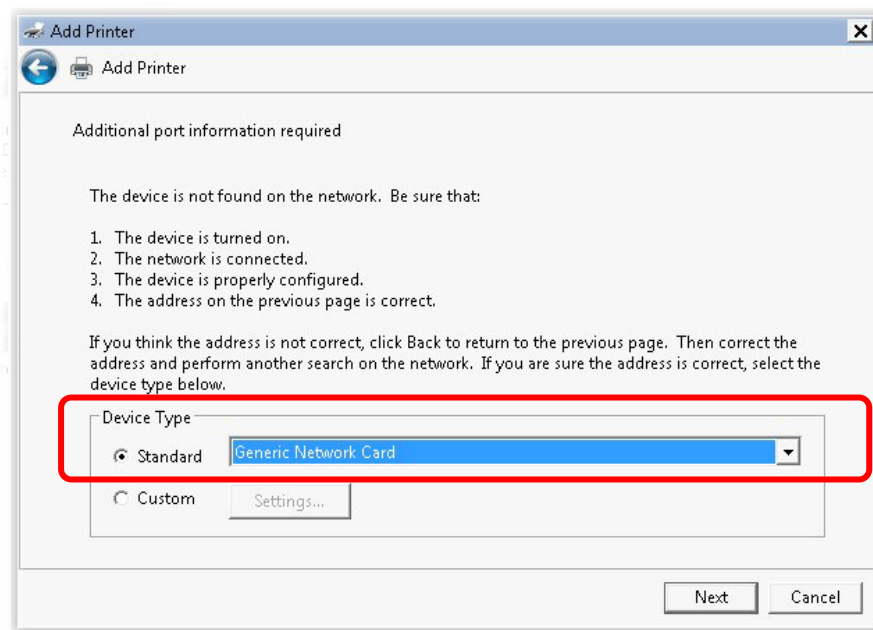

6. In the following dialog, type **192.168.1.1** (router's LAN IP) in the field of **Hostname or IP Address** and type **192.168.1.1** as the **Port name**. Then, click **Next**.

The screenshot shows the 'Add Printer' dialog box with the title bar 'Add Printer'. The main area is titled 'Type a printer hostname or IP address'. Below this, there is a 'Device type:' dropdown menu set to 'TCP/IP Device'. A red rectangle highlights the 'Hostname or IP address:' and 'Port name:' fields, both containing the text '192.168.1.1'. Below these fields is a checkbox labeled 'Query the printer and automatically select the driver to use', which is currently unchecked. At the bottom right, there are 'Next' and 'Cancel' buttons.

7. Click **Standard** and choose **Generic Network Card**.

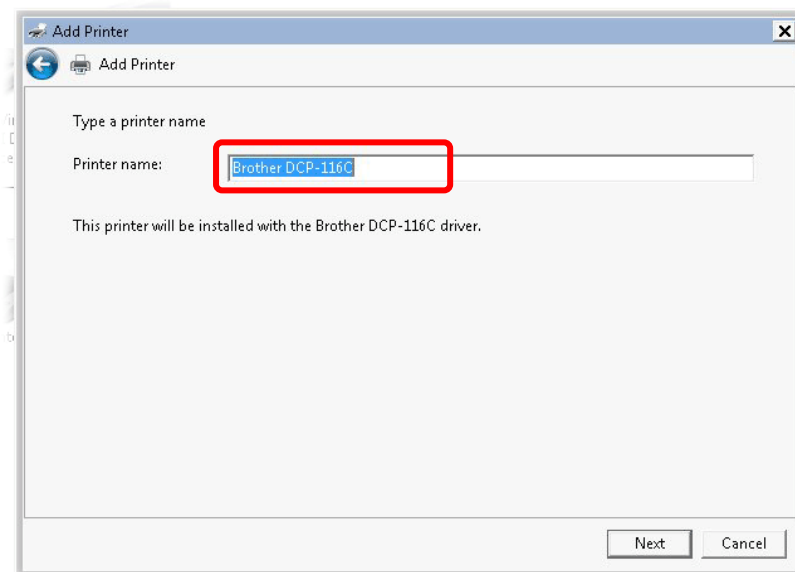

The screenshot shows the 'Add Printer' dialog box with the title bar 'Add Printer'. The main area is titled 'Additional port information required'. Below this, it says 'The device is not found on the network. Be sure that:' followed by a list of four items: 1. The device is turned on. 2. The network is connected. 3. The device is properly configured. 4. The address on the previous page is correct. Below the list, it says 'If you think the address is not correct, click Back to return to the previous page. Then correct the address and perform another search on the network. If you are sure the address is correct, select the device type below.' A red rectangle highlights the 'Device Type' section, which has a radio button selected for 'Standard' and a dropdown menu showing 'Generic Network Card'. There is also a 'Custom' radio button and a 'Settings...' button. At the bottom right, there are 'Next' and 'Cancel' buttons.

8. Now, your system will ask you to choose right name of the printer that you installed onto the router. Such step can make correct driver loaded onto your PC. When you finish the selection, click **Next**.

9. Type a name for the chosen printer. Click **Next**.

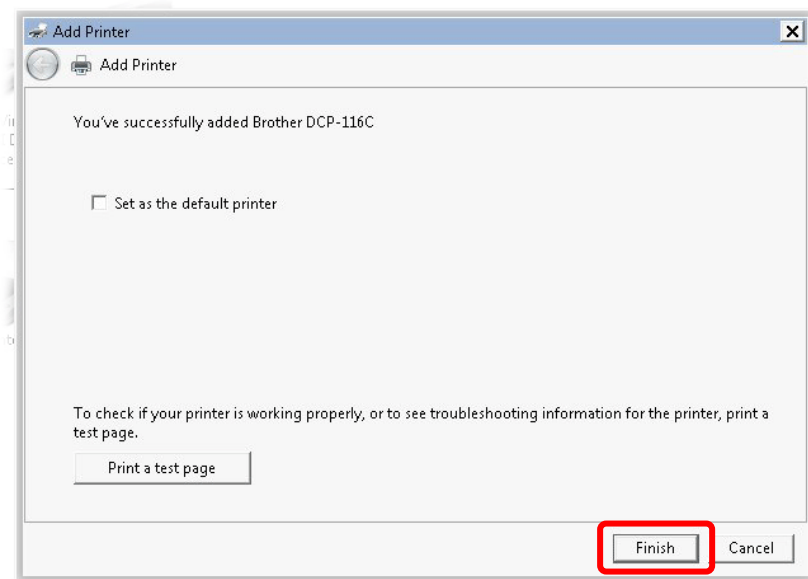

10. Choose **Do not share this printer** and click **Next**.

11. Then, in the following dialog, click **Finish**.

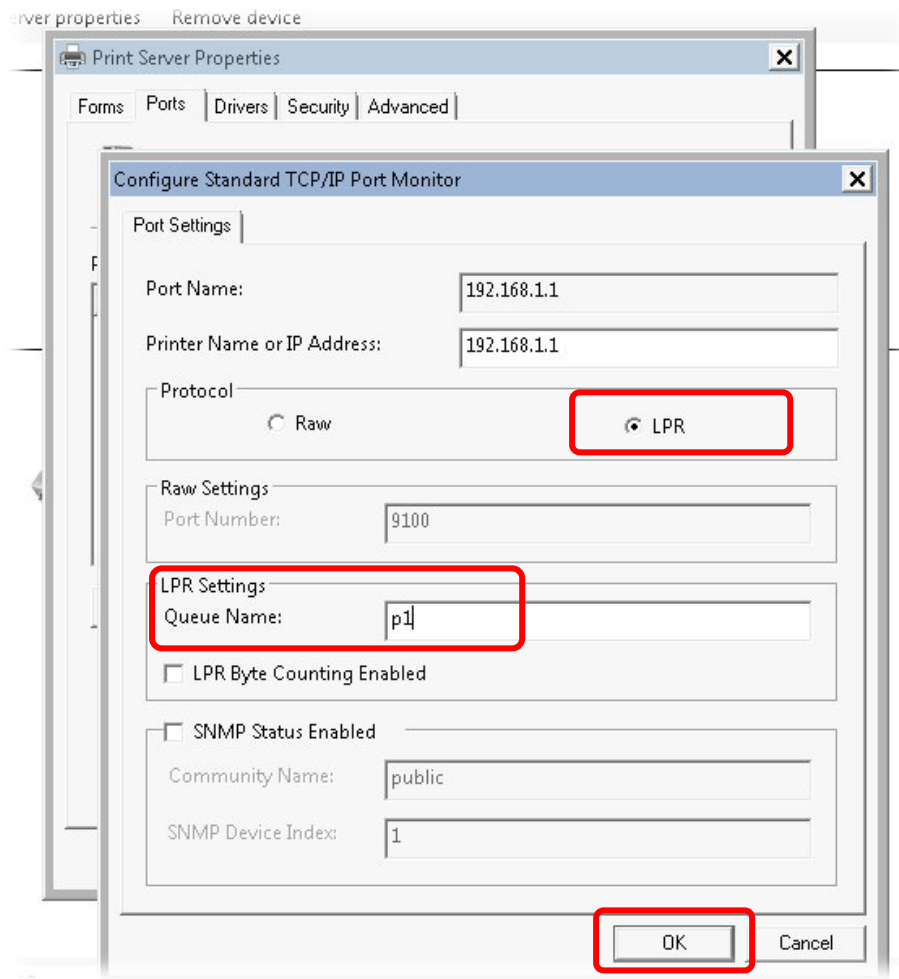

12. The new printer has been added and displayed under **Printers and Faxes**. Click the new printer icon and click **Printer server properties**.

13. Edit the property of the new printer you have added by clicking **Configure Port**.

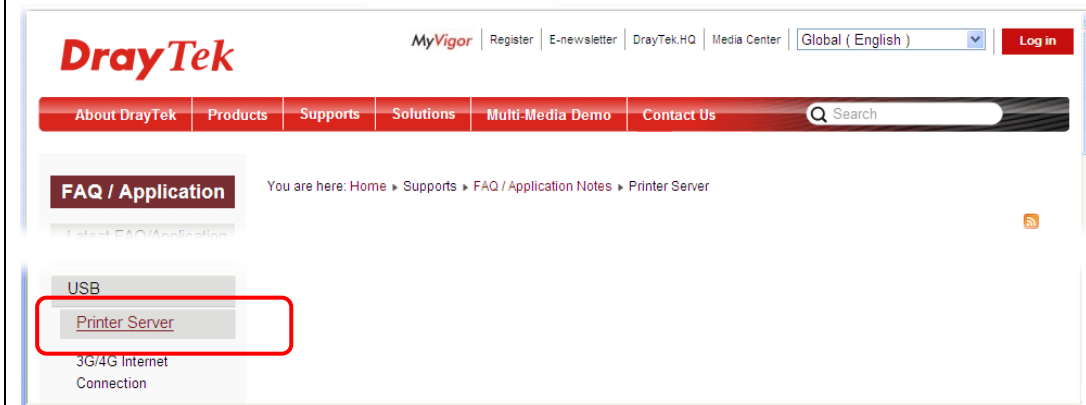

14. Select "LPR" on Protocol, type p1 (number 1) as **Queue Name**. Then click **OK**. Next please refer to the red rectangle for choosing the correct protocol and LPR name.

The printer can be used for printing now. Most of the printers with different manufacturers are compatible with vigor router.

**Note 1:** Some printers with the fax/scanning or other additional functions are not supported. If you do not know whether your printer is supported or not, please visit [www.draytek.com](http://www.draytek.com) to find out the printer list. Open **Support >FAQ/Application Notes**; find out the link of **USB>>Printer Server** and click it.

Then, click the **What types of printers are compatible with Vigor router?** link.

**Note 2:** Vigor router supports printing request from computers via LAN ports but not WAN port.

## 1.5 Accessing Web Page

1. Make sure your PC connects to the router correctly.

You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

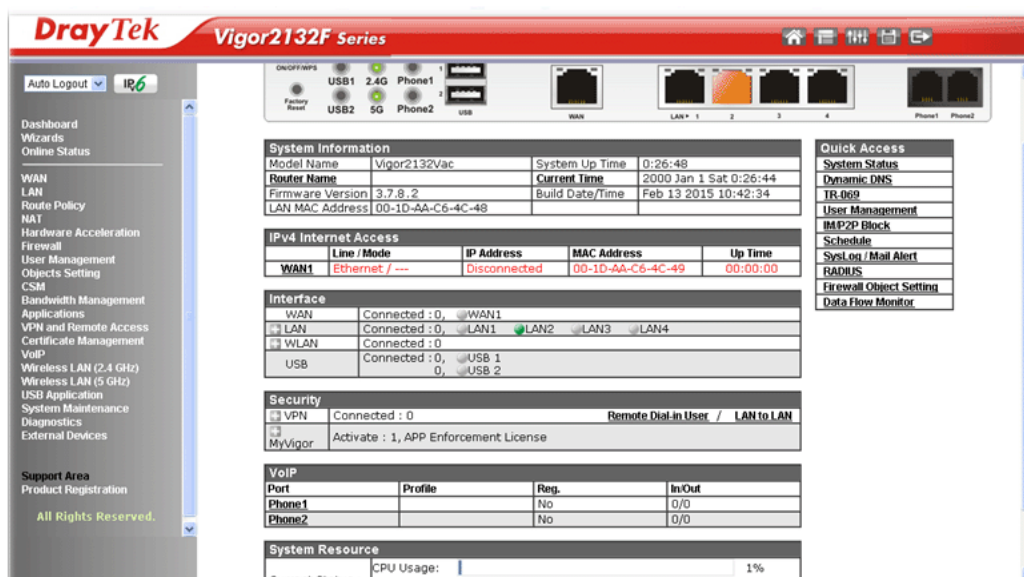

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

3. Please type “admin/admin” as the Username/Password and click **Login**.

**Notice:** If you fail to access to the web configuration, please go to “Trouble Shooting” for detecting and solving your problem.

4. Now, the **Main Screen** will appear.

**Note:** The home page will be different slightly in accordance with the type of the router you have.

- The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

## 1.6 Changing Password

Please change the password for the original security of the router.

- Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
- Please type “admin/admin” as Username/Password for accessing into the web user interface with admin mode.
- Go to **System Maintenance** page and choose **Administrator Password**.

### System Maintenance >> Administrator Password Setup

#### Administrator Password

Old Password	<input type="password"/>	
New Password	<input type="password"/>	(Max. 23 characters allowed)
Confirm Password	<input type="password"/>	(Max. 23 characters allowed)

**Note:** Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( ) \$ % &  
**Extra Administrator Password**

4. Enter the login password (the default is “admin”) on the field of **Old Password**. Type new password on the fields of **New Password** and **Confirm Password**. Then click **OK** to continue.

**Note:** The maximum length of the password you can set is 23 characters.

5. Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

**Note:** Even the password has been changed, the Username for logging to the web user interface is still “admin”.

## 1.7 Introducing Dashboard

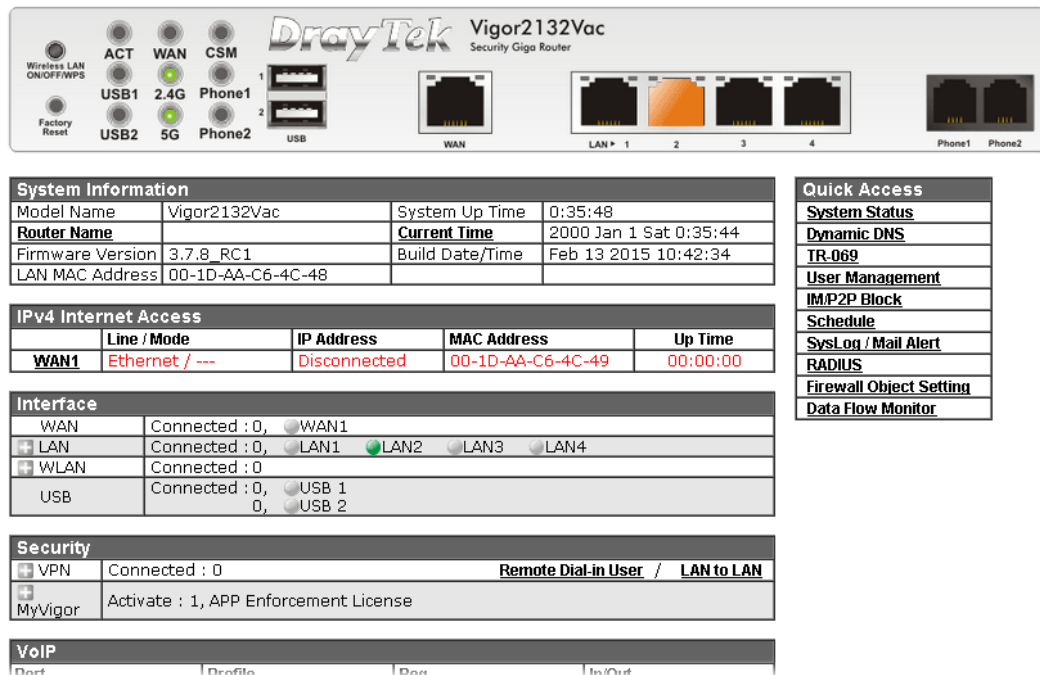

Dashboard shows the connection status including System Information, IPv4 Internet Access, IPv6 Internet Access, Interface (physical connection), Security and Quick Access.

Click **Dashboard** from the main menu on the left side of the main page.

A web page with default selections will be displayed on the screen. Refer to the following figure:

## Dashboard

The dashboard for the DrayTek Vigor2132Vac Security Giga Router displays various system and network information. At the top, there is a virtual panel showing physical interface connections with LEDs for ACT, WAN, CSM, USB1, 2.4G, Phone1, USB2, 5G, Phone2, and USB. Below this, the System Information table provides details on the model, router name, firmware, and LAN MAC address. The IPv4 Internet Access table shows the WAN1 connection status as disconnected. The Interface table lists the status of WAN, LAN, WLAN, and USB. The Security section shows VPN and MyVigor status. The VoIP section is partially visible.

System Information			
Model Name	Vigor2132Vac	System Up Time	0:35:48
Router Name		Current Time	2000 Jan 1 Sat 0:35:44
Firmware Version	3.7.8_RC1	Build Date/Time	Feb 13 2015 10:42:34
LAN MAC Address	00-1D-AA-C6-4C-48		

IPv4 Internet Access				
	Line / Mode	IP Address	MAC Address	Up Time
WAN1	Ethernet / ---	Disconnected	00-1D-AA-C6-4C-49	00:00:00

Interface	
WAN	Connected : 0, WAN1
LAN	Connected : 0, LAN1 LAN2 LAN3 LAN4
WLAN	Connected : 0
USB	Connected : 0, USB 1 USB 2

Security	
VPN	Connected : 0 Remote Dial-in User / LAN to LAN
MyVigor	Activate : 1, APP Enforcement License

VoIP			
Port	Profile	Reg.	In/Out

**Quick Access**

- System Status
- Dynamic DNS
- TR-069
- User Management
- IM/P2P Block
- Schedule
- SysLog / Mail Alert
- RADIUS
- Firewall Object Setting
- Data Flow Monitor

### 1.7.1 Virtual Panel

On the top of the Dashboard, a virtual panel (simulating the physical panel of the router) displays the physical interface connection. It will be refreshed every five seconds.

## Dashboard

The dashboard for the DrayTek Vigor2132FVn Security Giga Router shows a similar layout to the Vigor2132Vac but with different interface options. The virtual panel at the top includes LEDs for ACT, WAN, Fiber, USB1, WLAN, Phone1, USB2, VPN, and Phone2. The interface table shows LAN2 is connected.

Interface	
WAN	Connected : 0, WAN1
LAN	Connected : 0, LAN1 LAN2 LAN3 LAN4
WLAN	Connected : 0
USB	Connected : 0, USB 1 USB 2

For detailed information about the LED display, refer to **1.2 LED Indicators and Connectors**.

## 1.7.2 Name with a Link

A name with a link (e.g., [Router Name](#), [Current Time](#), [WAN1](#) and etc.) below means you can click it to open the configuration page for modification.

System Information

Model Name	Vigor2132Vac	System Up Time	0:35:48
Router Name		Current Time	2000 Jan 1 Sat 0:35:44
Firmware Version	3.7.8_RC1	Build Date/Time	Feb 13 2015 10:42:34
LAN MAC Address	00-1D-AA-C6-4C-48		

IPv4 Internet Access

	Line / Mode	IP Address	MAC Address	Up Time
WAN1	Ethernet / ---	Disconnected	00-1D-AA-C6-4C-49	00:00:00

Interface

WAN	Connected : 0, <input type="radio"/> WAN1
+ LAN	Connected : 0, <input type="radio"/> LAN1 <input checked="" type="radio"/> LAN2 <input type="radio"/> LAN3 <input type="radio"/> LAN4
+ WLAN	Connected : 0
USB	Connected : 0, <input type="radio"/> USB 1 0, <input type="radio"/> USB 2

Security

+ VPN	Connected : 0	Remote Dial-in User / LAN to LAN
+ MyVigor	Activate : 1, APP Enforcement License	

## 1.7.3 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. However, some **important** and **common** used menu items which can be accessed in a quick way just for convenience.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under **Quick Access**.

Quick Access
<a href="#">System Status</a>
<a href="#">Dynamic DNS</a>
<a href="#">TR-069</a>
<a href="#">User Management</a>
<a href="#">IM/P2P Block</a>
<a href="#">Schedule</a>
<a href="#">SysLog / Mail Alert</a>
<a href="#">RADIUS</a>
<a href="#">Firewall Object Setting</a>
<a href="#">Data Flow Monitor</a>

The function links of System Status, Dynamic DDNS, TR-069, User Management, IM/P2P Block, Schedule, Syslog/Mail Alert, RADIUS, Firewall Object Setting and Data Flow Monitor are displayed here. Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

In addition, quick access for VPN security settings such as **Remote Dial-in User** and **LAN to LAN** are located on the bottom of this page. Scroll down the page to find them and use them if required.

Interface	
WAN	Connected : 0, <input type="radio"/> WAN1
<b>+</b> LAN	Connected : 0, <input type="radio"/> LAN1 <input checked="" type="radio"/> LAN2 <input type="radio"/> LAN3 <input type="radio"/> LAN4
<b>+</b> WLAN	Connected : 0
USB	Connected : 0, <input type="radio"/> USB 1 0, <input type="radio"/> USB 2

Security	
<b>+</b> VPN	Connected : 0 <b>Remote Dial-in User / LAN to LAN</b>
MyVigor	Activate : 0

Note that there is a plus ( **+** ) icon located on the left side of VPN/LAN. Click it to review the VPN connection(s) used presently.

Security				
 VPN	Connected : 0		Remote Dial-in User / LAN to LAN	
	Current Page: 1		Page No.	1  
	Name / User	Type / Security	Host IP	Up Time
 MyVigor	Activate : 0			

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

Interface			
WAN	Connected : 0, <input type="radio"/> WAN1		
LAN	Connected : 1, <input type="radio"/> LAN1 <input checked="" type="radio"/> LAN2 <input type="radio"/> LAN3 <input type="radio"/> LAN4		
	Host ID	IP Address	MAC
	PARACHUTES5	192.168.1.37	20-C9-D0-45-3E-7F
WLAN	Connected : 0		

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

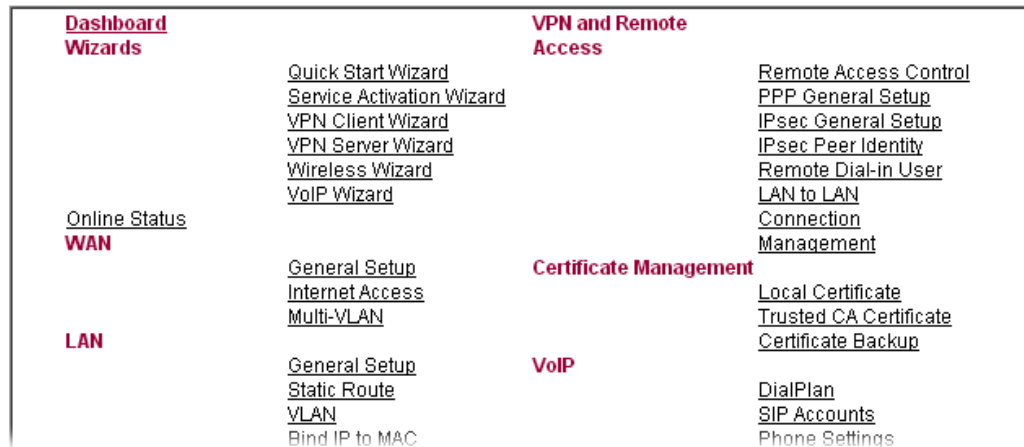

#### 1.7.4 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

## GUI Map

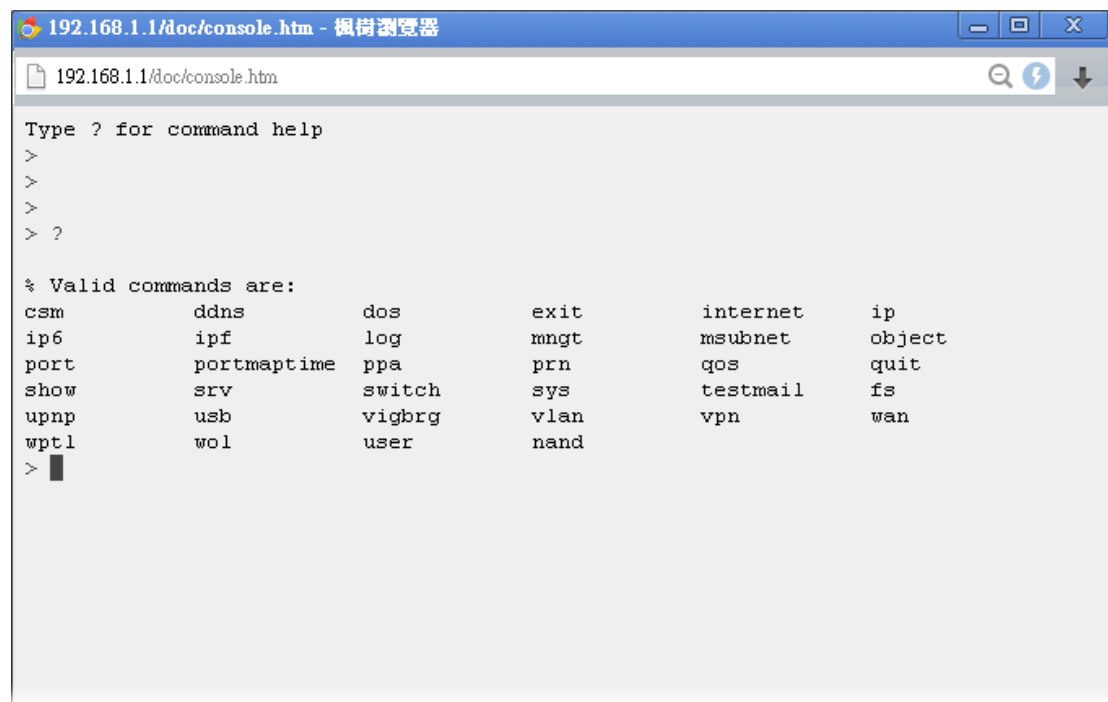

## 1.7.5 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the **Web Console** icon on the top of the main screen to open the following screen.

## 1.7.6 Config Backup

There is one way to store current used settings quickly by clicking the **Config Backup** icon. It allows you to backup current settings as a file. Such configuration file can be restored by using **System Maintenance>>Configuration Backup**.

Simply click the icon on the top of the main screen and a pop up dialog will appear.

Click **Save** to store the setting.

## 1.7.7 Logout

Click the **Logout** icon to exit the web user interface.

## 1.8 Online Status

Online Status  
Physical Connection  
Virtual WAN

### 1.8.1 Physical Connection

Such page displays the physical connection status such as LAN connection status, WAN connection status, and so on.

#### Physical Connection for IPv4 Protocol

Online Status

Physical Connection				System Uptime: 0day 0:7:1	
IPv4		IPv6			
LAN Status		Primary DNS: 8.8.8.8		Secondary DNS: 8.8.4.4	
IP Address	TX Packets	RX Packets			
192.168.1.1	1302	13442			
WAN Status					
Enable	Line	Name	Mode	Up Time	
Yes	Ethernet		---	00:00:00	
IP	GW IP	TX Bytes	TX Rate(Bps)	RX Bytes	RX Rate(Bps)
---	---	0 (B)	0	0 (B)	0

#### Physical Connection for IPv6 Protocol

Online Status

Physical Connection				System Uptime: 0day 0:7:37	
IPv4		IPv6			
LAN Status					
IP Address					
FE80::21D:AFF:FEC5:59E0/64 (Link)					
TX Packets		RX Packets		TX Bytes	
5		2		390	
				RX Bytes	
				156	
WAN IPv6 Status					
Enable		Mode		Up Time	
No		Offline		---	
IP		Gateway IP			
---		---			

Detailed explanation (for IPv4) is shown below:

Item	Description
LAN Status	<b>Primary DNS</b> -Displays the primary DNS server address for WAN interface.
	<b>Secondary DNS</b> -Displays the secondary DNS server address for WAN interface.
	<b>IP Address</b> -Displays the IP address of the LAN interface.
	<b>TX Packets</b> -Displays the total transmitted packets at the LAN interface.
	<b>RX Packets</b> -Displays the total received packets at the LAN interface.

Item	Description
WAN Status	<p><b>Enable</b> – <b>Yes</b> in red means such interface is available but not enabled. <b>Yes</b> in green means such interface is enabled.</p> <p><b>Line</b> – Displays the physical connection (Ethernet, or USB) of this interface.</p> <p><b>Name</b> – Display the name of the router.</p> <p><b>Mode</b> - Displays the type of WAN connection (e.g., PPPoE).</p> <p><b>Up Time</b> - Displays the total uptime of the interface.</p> <p><b>IP</b> - Displays the IP address of the WAN interface.</p> <p><b>GW IP</b> - Displays the IP address of the default gateway.</p> <p><b>TX Packets</b> - Displays the total transmitted packets at the WAN interface.</p> <p><b>TX Rate</b> - Displays the speed of transmitted octets at the WAN interface.</p> <p><b>RX Packets</b> - Displays the total number of received packets at the WAN interface.</p> <p><b>RX Rate</b> - Displays the speed of received octets at the WAN interface.</p>

Detailed explanation (for IPv6) is shown below:

Item	Description
LAN Status	<p><b>IP Address</b>- Displays the IPv6 address of the LAN interface..</p> <p><b>TX Packets</b>-Displays the total transmitted packets at the LAN interface.</p> <p><b>RX Packets</b>-Displays the total received packets at the LAN interface.</p> <p><b>TX Bytes</b> - Displays the speed of transmitted octets at the LAN interface.</p> <p><b>RX Bytes</b> - Displays the speed of received octets at the LAN interface.</p>
WAN IPv6 Status	<p><b>Enable</b> – <b>No</b> in red means such interface is available but not enabled. <b>Yes</b> in green means such interface is enabled. <b>No</b> in red means such interface is not available.</p> <p><b>Mode</b> - Displays the type of WAN connection (e.g., TSPC).</p> <p><b>Up Time</b> - Displays the total uptime of the interface.</p> <p><b>IP</b> - Displays the IP address of the WAN interface.</p> <p><b>Gateway IP</b> - Displays the IP address of the default gateway.</p>

**Note:** The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

## 1.8.2 Virtual WAN

Such page displays the virtual WAN connection information.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

Online Status

Virtual WAN						System Uptime: 3:15:25
WAN 5 Status						
Enable	Line	Name	Mode	Up Time	Application	
Yes	Ethernet		---	00:00:00	Management	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	
WAN 6 Status						
Enable	Line	Name	Mode	Up Time	Application	
Yes	Ethernet		---	00:00:00	Management	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	
WAN 7 Status						
Enable	Line	Name	Mode	Up Time	Application	
Yes	Ethernet		---	00:00:00	Management	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	

## 1.9 Saving Configuration

Each time you click **OK** on the web page for saving the configuration, you can find messages showing the system interaction with you.

Admin mode  
Status: Settings Saved

**Ready** indicates the system is ready for you to input settings.

**Settings Saved** means your settings are saved once you click **Finish** or **OK** button.

This page is left blank.

# 2

## Quick Setup

There are several setup wizards offered for you to configure the router simply and quickly.

- **Quick Start Wizard** – used for building network connection, Internet access.
- **Service Activation Wizard** – used for activating the web content filter service.
- **VPN Client Wizard** – used for establishing VPN tunnel; the router is treated as a VPN client.
- **VPN Server Wizard** – used for establishing VPN tunnel; the router is treated as a VPN server.
- **Wireless Wizard** – used for building wireless LAN connection.
- **VoIP Wizard** – used for establishing VoIP profile.

### 2.1 Quick Start Wizard

If your router can be under an environment with high speed NAT, the configuration provide here can help you to deploy and use the router quickly. The first screen of **Quick Start Wizard** is entering login password. After typing the password, please click **Next**.

#### Quick Start Wizard

##### Enter login password

Please enter an alpha-numeric string as your Password (Max 23 characters).

Old Password	<input type="password"/>
New Password	<input type="password"/>
Confirm Password	<input type="password"/>

On the next page as shown below, please select the appropriate Internet access type according to the information from your ISP. For example, you should select PPPoE mode if the ISP provides you PPPoE interface. Then click **Next** for next step.

## PPPoE

1. Click **PPPoE** as the Internet Access Type. Then click **Next** to continue.

### Quick Start Wizard

#### Connect to Internet

##### WAN 1

Select one of the following Internet Access types provided by your ISP.

- ☒ PPPoE
- ☐ PPTP
- ☐ L2TP
- ☐ Static IP
- ☐ DHCP

< Back

Next >

Finish

Cancel

2. Detailed settings for **PPPoE** are shown as follows. Please manually enter the Username/Password provided by your ISP.

### Quick Start Wizard

#### PPPoE Client Mode

##### WAN 1

Enter the user name and password provided by your ISP.

Service Name (Optional)

CHT

Username

84005657@hinet.net

Password

\*\*\*\*\*

Confirm Password

\*\*\*\*\*

< Back

Next >

Finish

Cancel

Available settings are explained as follows:

Item	Description
Service Name (Optional)	Enter the description of the specific network service.
Username	Assign a specific valid user name provided by the ISP. <b>Note:</b> The maximum length of the user name you can set is 63 characters.

<b>Password</b>	Assign a valid password provided by the ISP. <b>Note:</b> The maximum length of the password you can set is 62 characters.
<b>Confirm Password</b>	Retype the password.
<b>Back</b>	Click it to return to previous setting page.
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Click it to give up the quick start wizard.

- Click **Next** for viewing summary of such connection.

#### Quick Start Wizard

##### Please confirm your settings:

WAN Interface:	WAN1
Physical Mode:	0
Physical Type:	Auto negotiation
Internet Access:	PPPoE

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

#### Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

## PPTP/L2TP

1. Click **PPTP/L2TP** as the Internet Access Type. Then click **Next** to continue.

### Quick Start Wizard

#### Connect to Internet

**WAN 1**  
Select one of the following Internet Access types provided by your ISP.

- ☐ PPPoE
- ☒ PPTP
- ☐ L2TP
- ☐ Static IP
- ☐ DHCP

2. Detailed settings for **PPTP** are shown as follows.

### Quick Start Wizard

#### PPTP Client Mode

**WAN 1**  
Enter the username, password, WAN IP configuration and PPTP server IP provided by your ISP.  
Username   
Password   
Confirm Password   
WAN IP Configuration

- ☐ Obtain an IP address automatically
- ☒ Specify an IP address

IP Address   
Subnet Mask   
Gateway   
PPTP Server

Available settings are explained as follows:

Item	Description
<b>Username</b>	Assign a specific valid user name provided by the ISP.
<b>Password</b>	Assign a valid password provided by the ISP.
<b>Confirm Password</b>	Retype the password.
<b>WAN IP Configuration</b>	<b>Obtain an IP address automatically</b> – the router will get an IP address automatically from DHCP server. <b>Specify an IP address</b> – you have to type relational settings manually.

	<b>IP Address</b> - Type the IP address. <b>Subnet Mask</b> –Type the subnet mask. <b>Gateway</b> – Type the IP address of the gateway.
<b>PPTP Server / L2TP Server</b>	Type the IP address of the server.
<b>Back</b>	Click it to return to previous setting page.
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Click it to give up the quick start wizard.

- Please type in the IP address/mask/gateway information originally provided by your ISP. Then click **Next** for viewing summary of such connection.

#### Quick Start Wizard

#### Please confirm your settings:

WAN Interface: WAN1  
 Physical Mode: 0  
 Physical Type: Auto negotiation  
 Internet Access: PPTP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

- Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

#### Quick Start Wizard Setup OK!

- Now, you can enjoy surfing on the Internet.

## Static IP

1. Click **Static IP** as the Internet Access type. Simply click **Next** to continue.

### Quick Start Wizard

#### Connect to Internet

**WAN 1**  
Select one of the following Internet Access types provided by your ISP.

☐ PPPoE  
☐ PPTP  
☐ L2TP  
☒ Static IP  
☐ DHCP

< Back   Next >   Finish   Cancel

2. Detailed settings for **Static IP** are shown as follows.

### Quick Start Wizard

#### Static IP Client Mode

**WAN 1**  
Enter the Static IP configuration provided by your ISP.

WAN IP                      192.168.3.100  
Subnet Mask                255.255.255.0  
Gateway                    192.168.3.1  
Primary DNS                168.95.1.1  
Secondary DNS               (optional)

< Back   Next >   Finish   Cancel

Available settings are explained as follows:

Item	Description
<b>WAN IP</b>	Type the IP address.
<b>Subnet Mask</b>	Type the subnet mask.
<b>Gateway</b>	Type the IP address of gateway.
<b>Primary DNS</b>	Type in the primary IP address for the router.
<b>Secondary DNS</b>	Type in secondary IP address for necessity in the future.
<b>Back</b>	Click it to return to previous setting page.
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Click it to give up the quick start wizard.

3. Please type in the IP address information originally provided by your ISP. Then click **Next** for next step.

#### Quick Start Wizard

##### Please confirm your settings:

WAN Interface:	WAN1
Physical Mode:	0
Physical Type:	Auto negotiation
Internet Access:	Static IP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

[< Back](#) [Next >](#) [Finish](#) [Cancel](#)

4. Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

#### Quick Start Wizard Setup OK!

5. Now, you can enjoy surfing on the Internet.

## DHCP

1. Click **DHCP** as the Internet Access type. Simply click **Next** to continue.

#### Quick Start Wizard

##### Connect to Internet

###### WAN 1

Select one of the following Internet Access types provided by your ISP.

- ☐ PPPoE
- ☐ PPTP
- ☐ L2TP
- ☐ Static IP
- ☒ DHCP

[< Back](#) [Next >](#) [Finish](#) [Cancel](#)

- Detailed settings for **DHCP** are shown as follows.

#### Quick Start Wizard

##### DHCP Client Mode

###### WAN 1

If your ISP requires you to enter a specific host name or specific MAC address, please enter it in.

Host Name  (optional)  
MAC       (optional)

[< Back](#)[Next >](#)[Finish](#)[Cancel](#)

Available settings are explained as follows:

Item	Description
Host Name	Type the name of the host. <b>Note:</b> The maximum length of the host name you can set is 39 characters.
MAC	Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to enter the MAC address.
Back	Click it to return to previous setting page.
Next	Click it to get into the next setting page.
Cancel	Click it to give up the quick start wizard.

- After finished the settings above, click **Next** for viewing summary of such connection.

#### Quick Start Wizard

##### Please confirm your settings:

WAN Interface: WAN1  
Physical Mode: Ethernet  
Physical Type: Auto negotiation  
Internet Access: DHCP

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and restart the Vigor router.

[< Back](#)[Next >](#)[Finish](#)[Cancel](#)

4. Click **Finish**. A page of **Quick Start Wizard Setup OK!!!** will appear. Then, the system status of this protocol will be shown.

**Quick Start Wizard Setup OK!**

5. Now, you can enjoy surfing on the Internet.

## 2.2 Service Activation Wizard

Service Activation Wizard can guide you to activate WCF service (Web Content Filter) with a quick and easy way. **For the Service Activation Wizard is only available for admin operation, therefore, please type “admin/admin” on Username/Password while Logging into the web user interface.**

Service Activation Wizard is a tool which allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>. For using Web Content Filter Profile, please refer to later section **Web Content Filter Profile** for detailed information.

Now, follow the steps listed below to activate WCF feature for your router.

**Note:** Such function is available only for **Admin Mode**.

1. Open **Service Activation Wizard**.

2. The screen of **Service Activation Wizard** will be shown as follows. Choose the one you need and click **Next**. In this case, we choose to activate free trial edition.

### Service Activation Wizard

#### Select the service type that you want to activate

This wizard is used for activating  
- Web Content Filter  
  
Please choose the edition you need.

☒ Free trial edition

<https://myvigor.draytek.com/>

Next >

Finish

Cancel

**Free trial edition:** it offers a period of trial for you to get acquainted with WCF function.

3. In the following page, you can activate the Web content filter services at the same time or individually. When you finish the selection, please click **Next**.

Service Activation Wizard

Select the service type that you want to activate

This product provides 30 days of free trial, please choose the item(s) you want to use.

WCF service:

☐ Web Content Filter (BPjM) [License Agreement](#)  
BPjM is the web content filter based on service operated in Germany. We recommend only users live in Germany to try the BPjM WCF service. This is a free service without guarantee.  
Activation Date : 2013-02-18

☒ Web Content Filter (Commmtouch) [License Agreement](#)  
Commmtouch is the web content filter based on Commmtouch operated in the worldwide. There is a 30-day trial period. After trial, you can purchase DrayTek's prepared Commmtouch GlobalView WCF package from retailing outlets.  
Activation Date : 2013-02-18

☒ I have read and accept the above Agreement. (Please check this box).

Note: The activation date is brought out by the server automatically and cannot be changed.

< Back **Next >** Finish Cancel

Service Activation Wizard

Select the service type that you want to activate

This product provides 30 days of free trial, please choose the item(s) you want to use.

For WCF service :

☐ Web Content Filter ( BPjM ) [License Agreement](#) Activation Date : 2015-02-24  
BPjM is the web content filter based on service operated in Germany. We recommend only users live in Germany to try the BPjM WCF service. This is a free service without guarantee.

☒ Web Content Filter ( Cyren / Commmtouch ) [License Agreement](#) Activation Date : 2015-02-24  
Cyren ( Commmtouch ) is the web content filter based on Cyren ( Commmtouch ) operated in the worldwide. There is a 30-day trial period. After trial, you can purchase DrayTek's prepared Cyren ( Commmtouch ) GlobalView WCF package from retailing outlets.

☒ I have read and accept the above Agreement. (Please check this box).

## 2.3 VPN Client Wizard

Such wizard is used to configure VPN settings for VPN client. Such wizard will guide to set the LAN-to-LAN profile for VPN dial out connection (from server to client) step by step.

1. Open **VPN and Remote Access>>VPN Client Wizard**. The following page will appear.

VPN and Remote Access >> VPN Client Wizard

### Choose VPN Establishment Environment

LAN-to-LAN VPN Client Mode Selection:

Route Mode ▼

Please choose a LAN-to-LAN Profile:

[Index] [Status] [Name] ▼

**Note:** For a typical LAN-to-LAN tunnel, please select Route Mode.  
If the remote network is expecting only a single client or ip and is not configured to route the subnet and then select NAT mode.  
If in doubt then select Route Mode

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for such profile. The length of the file is limited to 10 characters.
<b>Always On</b>	Check to enable router always keep VPN connection.

<b>Server IP/Host Name for VPN</b>	Type the IP address of the server or type the host name for such VPN profile.
<b>IKE Authentication Method</b>	<p>IKE Authentication Method usually applies to those are remote dial-in user or node (LAN to LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel.</p> <p><b>Pre-Shared Key</b>- Specify a key for IKE authentication.</p> <p><b>Confirm Pre-Shared Key</b>-Confirm the pre-shared key.</p>
<b>Digital Signature (X.509)</b>	<p>Click <b>Digital Signature</b> to invoke this function.</p> <p><b>Peer ID</b> – Choose the peer ID selection from the drop down list.</p> <p><b>Local ID</b> – Choose <b>Alternative Subject Name First</b> or <b>Subject Name First</b>.</p> <p><b>Local Certificate</b> – Use the drop down list to choose one of the certificates for using. You have to configure one certificate at least previously in <b>Certificate Management &gt;&gt; Local Certificate</b>. Otherwise, the setting you choose here will not be effective.</p>
<b>IPsec Security Method</b>	<p><b>Medium</b> - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p><b>High</b> - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>
<b>User Name</b>	<p>This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above.</p> <p>The length of the use name is limited to 11 characters.</p>
<b>Password</b>	<p>This field is used to authenticate for connection when you select PPTP or L2TP with or without IPsec policy above.</p> <p>The length of the password is limited to 11 characters.</p>
<b>Remote Network IP</b>	Please type one LAN IP address (according to the real location of the remote host) for building VPN connection.
<b>Remote Network Mask</b>	Please type the network mask (according to the real location of the remote host) for building VPN connection.

- After finishing the configuration, please click **Next**. The confirmation page will be shown as follows. If there is no problem, you can click one of the radio buttons listed on the page and click **Finish** to execute the next action.

## VPN Client Wizard

### Please confirm your settings

LAN-to-LAN Index: 3  
Profile Name: 1233  
VPN Connection Type: PPTP (None Encryption)  
Always on: Yes  
Server IP/Host Name: 1.1.1.1  
Remote Network IP: 0.0.0.0  
Remote Network Mask: 255.255.255.0

Click **Back** to modify changes if necessary. Otherwise, click **Finish** to save the current settings and proceed to the following action:

- ☒ Go to the VPN Connection Management.
- ☐ Do another VPN Client Wizard setup.
- ☐ View more detailed configurations.

## 2.5 Wireless Wizard

The wireless wizard allows you to configure settings specified for a host AP (for home use or internal use for a company) and specified for a guest AP (for any wireless clients accessing into Internet).

Follow the steps listed below:

1. Open **Wireless Wizard**.

2. The screen of wireless wizard will be shown as follows. This page will be used for *internal users in a company or at home*. Type the required data offered by your ISP.

### Wireless Wizard

#### Host AP Configuration

**Wireless 2.4GHz Settings**  
Name:   
Mode:   
Channel:   
Security Key:

**Wireless 5GHz Settings**  
☐ Use the same SSID and Security Key as above  
Name:   
Mode:   
Channel:   
Security Key:

**Note:** The host AP configured here will be used for home or internal company use.

Available settings are explained as follows:

Item	Description
<b>Wireless 2.4GHz Settings</b>	
<b>Name</b>	Type the SSID name of this router for wireless 2.4GHz. The default name is defined with DrayTek. Change the name if required.
<b>Mode</b>	At present, the router can connect to 11n Only, 11g Only, Mixed (11b+11g), Mixed (11a+11n), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mix (11b+11g+11n) mode.
<b>Channel</b>	Means the channel of frequency of the wireless LAN. The default channel is 6. You may switch channel if the selected

	channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.
<b>Security Key</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Use the same SSID and Security Key as above</b>	Check the box to use the same settings configured above.
<b>Wireless 5GHz Settings (not available for Vigor2132FVn)</b>	
<b>Name</b>	Type the SSID name of this router for wireless 5GHz.
<b>Mode</b>	At present, the router can connect to 11a Only, 11n Only (5GHz), Mixed (11a+11n) and Mixed (11a+11n+11ac) stations simultaneously.
<b>Channel</b>	Means the channel of frequency of the wireless LAN. The default channel is 36. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select Auto to let system determine for you.
<b>Security Key</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Exit the wireless wizard without saving any changes.

Note that, for the communication, all wireless devices must support the same encryption bit length and share the same key. If WEP mode is selected, only one of four preset keys can be selected at one time.

- After typing the required information, click **Next**. The settings in the page limit the wireless station (guest) *accessing into Internet but not being allowed to share the LAN network and VPN connection*.

#### Wireless Wizard

##### Guest AP Configuration

**Wireless 2.4GHz Settings**  
☐ Enable ☒ Disable  
SSID:   
Security Key:   
Rate Control: ☐ Enable Upload  kbps Download  kbps

**Wireless 5GHz Settings**  
☐ Enable ☒ Disable  
☐ Use the same SSID and Security Key as above  
SSID:   
Security Key:   
Rate Control: ☐ Enable Upload  kbps Download  kbps

**Note:** The configured guest AP will not be able to access the LAN network, VPN connections, or communicate with wireless devices connecting to the router's other APs. This AP interface shall be used for Internet access only.

Available settings are explained as follows:

Item	Description
<b>Wireless 2.4GHz Settings</b>	
<b>Enable/Disable</b>	Click it to enable or disable settings in this page.
<b>SSID</b>	Type the SSID name of this router.
<b>Security Key</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Rate Control</b>	<p>It controls the data transmission rate through wireless connection.</p> <p><b>Upload</b> – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p> <p><b>Download</b> – Type the transmitting rate for data download. Default value is 30,000 kbps.</p>
<b>Wireless 5GHz Settings (not available for Vigor2132FVn)</b>	
<b>Enable/Disable</b>	Click it to enable or disable settings in this page.
<b>Use the same SSID and Security Key as above</b>	Check the box to use the same settings configured above.
<b>SSID</b>	Type the SSID name of this router. (SSID2)

<b>Security Key</b>	<p>The wireless mode offered by this wizard is WPA2/PSK. The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication.</p> <p>Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>Rate Control</b>	<p>It controls the data transmission rate through wireless connection.</p> <p><b>Upload</b> – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p> <p><b>Download</b> – Type the transmitting rate for data download. Default value is 30,000 kbps.</p>
<b>Next</b>	Click it to get into the next setting page.
<b>Cancel</b>	Exit the wireless wizard without saving any changes.

**Note:** Security Key(s) defined for Host AP and Guest AP must be different to avoid that guest accesses into internal server in a company.

- After typing the required information, click **Next**.
- The following page will display the configuration summary for wireless setting.

#### Wireless Wizard

##### Configuration Summary

Wireless 2.4GHz Settings	Wireless 5GHz Settings
Mode:Mixed(11b+11g+11n) Channel:Channel 6, 2437MHz	Mode:Mixed (11a+11n+11ac) Channel:Channel 36, 5180MHz
Host AP SSID Name:DrayTek Security Key:*****	Host AP SSID Name:DrayTek_5G Security Key:*****
Guest AP Status:Disabled SSID Name:DrayTek_Guest Security Key:***** Rate Control:Disabled	Guest AP Status:Disabled SSID Name:DrayTek_5G_Guest Security Key:***** Rate Control:Disabled

- Click **Finish** to complete the wireless settings configuration.

## 2.6 VoIP Wizard

Vigor router offers a quick method to configure settings for VoIP application. Follow the steps listed below.

**Note:** This wizard is available for “V” model only.

1. Open **Wizards>>VoIP Wizard**.

2. The screen of **VoIP Wizard** will be shown as follows.

**VoIP Wizard**

---

**Set VoIP service provider domain**

VoIP service provider	<input type="text" value="draytel.org"/>	<input type="text" value="draytel.org"/> (63 char max).
SIP Port	<input type="text" value="5060"/>	

**Set Account quickly**

Phone 1 (default mapping to Account 1)	
Account Number/Name	<input type="text" value="---"/> (63 char max).
Password	<input type="password"/> (63 char max).
Phone 2 (default mapping to Account 2)	
<input checked="" type="checkbox"/> use the same Account as phone1	
Account Number/Name	<input type="text" value="---"/> (63 char max).
Password	<input type="password"/> (63 char max).

Available settings are explained as follows:

Item	Description
<b>Set VoIP service provider domain</b>	<b>VoIP service provider</b> - Use the drop down list to choose the ISP which offers the VoIP service for your router. <b>SIP Port</b> – Use the default setting (5060).
<b>Set Account quickly</b>	<b>Account Number/Name</b> – Type the account number/name registered to your ISP. <b>Password</b> – Type the password for the account registered to your ISP. <b>Use the same Account as phone 1</b> – If you don't need to configure Phone 2 settings, simply check this box.
<b>Next</b>	Click it to get into the next setting page.

<b>Cancel</b>	Click it to give up the quick start wizard.
---------------	---

- After finished the settings above, click **Next** for viewing summary of such connection.

#### VoIP Wizard

##### Please confirm your settings:

VoIP Service Provider	draytel.org
SIP Port	5060
Phone 1 Account	5633s
Phone 2 Account	5633s
Click <b>Back</b> to modify changes if necessary. Otherwise, click <b>Finish</b> to save current settings.	

- Click **Finish**. A page of **VoIP Wizard Setup OK!!!** will appear.

**VoIP Wizard Setup OK!**

## 2.7 Registering Vigor Router

You have finished the configuration of Quick Start Wizard and you can surf the Internet at any time. Now it is the time to register your Vigor router to MyVigor website *for getting more service*. Please follow the steps below to finish the router registration.

- 1 Please login the web configuration interface of Vigor router by typing “**admin/admin**” as User Name / Password.

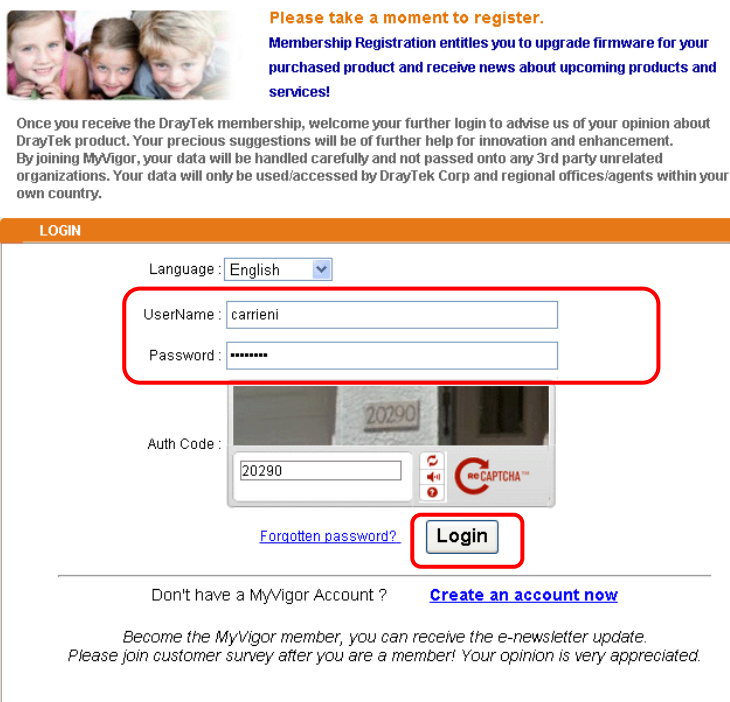

The image shows the login page for the DrayTek Vigor2132F Series router. The page has a red header with the DrayTek logo and the product name. Below the header is a black bar with the word "Login" in white. The main area is white and contains two input fields: "Username" with the text "admin" and "Password" with masked characters ".....". A "Login" button is located below the password field.

- 2 Click **Support Area>>Production Registration** from the home page.

- 3 A **Login** page will be shown on the screen. Please type the account and password that you created previously. And click **Login**.

The image shows the MyVigor login page. It has an orange header with the word "LOGIN". Below the header is a language dropdown menu set to "English". The main area is white and contains a red-bordered box around the "UserName" and "Password" input fields. The "UserName" field contains the text "carrieni" and the "Password" field contains masked characters ".....". Below the input fields is a "Auth Code" section with a CAPTCHA image showing the number "20290" and a "reCAPTCHA" logo. A "Login" button is located below the CAPTCHA. To the left of the button is a link "Forgotten password?". Below the button is a link "Create an account now". At the bottom of the page is a footer with the text "Don't have a MyVigor Account ?" and "Create an account now".

**Notice:** If you haven't an accessing account, please refer to section 3.8 Creating an Account for MyVigor on User's Guide to create your own one. Please **read the articles on the Agreement regarding user rights** carefully while creating a user account.

- 4 The following page will be displayed after you logging in MyVigor. From this page, please click **Product Registration** or **Add**.

DrayTek Login User : carrieni (Logout) MyVigor

- 6 When the following page appears, your router information has been added to the database.

Your device has been successfully added to the database.

- 7 Now, you have finished the product registration.
- 8 After clicking **OK**, you will see the following page. Your router has been registered to *myvigor* website successfully.

A screenshot of the DrayTek MyVigor web interface. The top header shows the DrayTek logo and the user's login status: "Login User : carieni (Logout)". The left sidebar contains navigation links: "About Us", "My Information", "> My Product", "> My Password", "> My Settings", "Vigor Series", and "Customer Survey". The main content area is titled "My Information - My Products" and displays a welcome message for "carieni" along with login timestamps. Below this, a "My Device List" table shows three registered devices. The third device, with serial number 2015022415571701, is highlighted with a red border.

Serial Number / Host ID	Device Name	Model	Note

## Tutorials and Applications

### 3.1 How to configure settings for IPv6 Service in Vigor2132FVn

Due to the shortage of IPv4 address, more and more countries use IPv6 to solve the problem. However, to continually use the original rich resources of IPv4, both IPv6 and IPv4 networks shall communicate for each other via intercommunication mechanism to complete the shifting job from IPv4 to IPv6 gradually. At present, there are three common types of intercommunication mechanisms:

- **Dual Stack**

The user can use both IPv4 and IPv6 techniques at the same time. That means adding an IPv6 stack on the origin network layer to let the host own the communication capability of IPv4 and IPv6.

- **Tunnel**

Both IPv6 hosts can communication for each other via existing IPv4 network environment. The IPv6 packets will be encapsulated with the header of IPv4 first. Later, the packets will be transformed and judged by IPv4 router. Once the packets arrive the border between IPv4 and IPv6, the header of IPv4 on the packets will be removed. Then, the packets with IPv6 address will be forwarded to the destination of IPv6 network.

- **Translation**

Such feature is active only for the user who uses IPv4 to communicate with other user using IPv4 service.

Before configuring the settings on Vigor2132FVn, you need to know which connection type that your IPv6 service used.

**Note:** For the IPv6 service, you have to configure WAN/LAN settings before using the service.

#### I. Configuring the WAN Settings

For the IPv6 WAN settings for Vigor2132FVn, there are five connection types to be chosen: PPP, TSPC, AICCU, DHCPv6 Client and Static IPv6.

1. Access into the web user interface of Vigor2132FVn. Open **WAN>> Internet Access**. Choose one of the WAN interfaces as the one supporting IPv6 service. Then, click the IPv6 button of the selected WAN.

**WAN >> Internet Access**

##### Internet Access

Index	Display Name	Physical Mode	Access Mode	
WAN1		Ethernet	None	<a href="#">Details Page</a> <a href="#">IPv6</a>

[Advanced](#) You can configure DHCP client opt

None

PPPoE

Static or Dynamic IP

PPTP/L2TP

**Note:** Only one WAN interface support IPv6 service at one time. In this example, WAN2 is chosen as the one supporting IPv6 service.

2. In the following figure, use the drop down list to choose a proper connection type.

WAN >> Internet Access

**WAN 2**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b>			
Connection Type		<div>Offline Offline PPP TSPC AICCU DHCPv6 Client Static IPv6 6in4 Static Tunnel 6rd</div>	
<div>OK</div>			

Different connection types will bring out different configuration page. Refer to the following:

- **PPP – Dual Stack application, IPv4 and IPv6 services can be utilized at the same time**

Choose PPP and type the information for PPPoE of IPv4.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<div><input type="radio"/> Enable <input checked="" type="radio"/> Disable</div>	<b>PPP/MP Setup</b>		
PPP Authentication: PAP or CHAP			
Idle Timeout: -1 second(s)			
<b>IP Address Assignment Method (IPCP)</b>			
WAN IP Alias			
Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP)			
Fixed IP Address			
<input checked="" type="radio"/> Default MAC Address			
<input type="radio"/> Specify a MAC Address			
MAC Address: 00 1D AA C5 59 E1			
<b>ISP Access Setup</b>			
Service Name (Optional)			
Username			
Password			
Index(1-15) in Schedule Setup:			
=> , , ,			
<b>WAN Connection Detection</b>			
Mode: ARP Detect			
Ping IP			
TTL:			
MTU: 1492 (Max:1492)			
<div>OK Cancel</div>			

Access into the setting page for IPv6 service, it is not necessary for you to configure anything.

## WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b>			
Connection Type		<div>PPP</div>	
<b>Note :</b> IPv4 WAN setting should be PPPoE client.			
<div>OK</div>		<div>Cancel</div>	

Click **OK** and open **Online Status**. If the connection is successful, you will get the IP address for IPv4 and IPv6 at the same time.

## Online Status

## II. Configuring the LAN Settings

After finished the WAN settings for IPv6, please configure the LAN settings to make the router's client getting the IPv6 address.

1. Access into the web user interface of Vigor2132FVn. Open **LAN>> General Setup**. Click the **IPv6** button.

**Note:** Only the subnet of **LAN1** supports IPv6 feature.

LAN >> General Setup

---

LAN 1 Ethernet TCP / IP and DHCP Setup

LAN 1 IPv6 Setup

**Router Advertisement Server**  
☒ Enable ☐ Disable  
Advertisement Lifetime 1800 Seconds (Range : 600 - 9000)

**DHCPv6 Server Configuration**  
☒ Enable Server ☐ Disable Server  
Start IPv6 Address 2001:1111:2222:3333::1111  
End IPv6 Address 2001:1111:2222:3333::2222  
**DNS Server IPv6 Address**  
Primary DNS Server 2001:4860:4860::8888  
Secondary DNS Server 2001:4860:4860::8844

**Static IPv6 Address configuration**  
IPv6 Address / Prefix Length  
/ Add Delete  
**Current IPv6 Address Table**

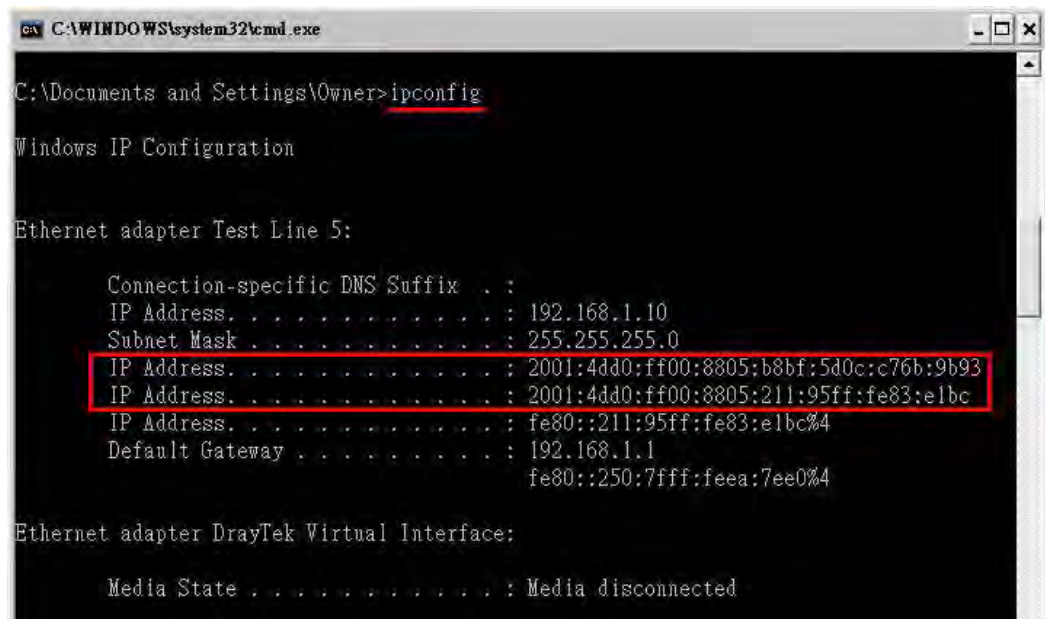

Index	IPv6 Address/Prefix Length	Scope
1	FE80::21D:AAFF:FEA6:2568/64	Link

2. In the field of **Router Advertisement Server**, the default setting is **Enable**. The client's PC will ask router advertisement service for the Prefix of IPv6 address automatically, and generate an Interface ID by itself to compose a full and unique IPv6 address.
3. In the field of **DHCPv6 Server Configuration**, when DHCPv6 service is enabled, you can assign available IPv6 address for the client manually.

**Note:** When both mechanisms are enabled, the client can determine which mechanism to be used (e.g., the default mechanism for Windows7 is router advertisement service).

### III. Confirming IPv6 Service Run Successfully

1. Make sure you have get the correct IPv6 IP address. Get into MS-DOS interface and type the command of “ipconfig”. Refer to the following figure.

```
C:\WINDOWS\system32\cmd.exe

C:\Documents and Settings\Owner>ipconfig

Windows IP Configuration

Ethernet adapter Test Line 5:

    Connection-specific DNS Suffix  . : 
    IP Address. . . . . : 192.168.1.10
    Subnet Mask . . . . . : 255.255.255.0
    IP Address. . . . . : 2001:4dd0:ff00:8805:b8bf:5d0c:c76b:9b93
    IP Address. . . . . : 2001:4dd0:ff00:8805:211:95ff:fe83:e1bc
    IP Address. . . . . : fe80::211:95ff:fe83:e1bc%4
    Default Gateway . . . . . : 192.168.1.1
                                fe80::250:7fff:feea:7ee0%4

Ethernet adapter DrayTek Virtual Interface:

    Media State . . . . . : Media disconnected
```

From the above figure we can see IPv6 IP address has been captured by the system.

2. Use the Ping command to ping any IPv6 address indicating an IPv6 website. For example, [www.kame.net](http://www.kame.net) is a website supporting IPv4 IP and IPv6 IP services. Its IPv6 address is seen with a format of 2001:200:dff:fff1:216:3eff:feb1:44d7.

```
C:\WINDOWS\system32\cmd.exe

C:\Documents and Settings\Owner>ping 2001:200:dff:fff1:216:3eff:feb1:44d7

Pinging 2001:200:dff:fff1:216:3eff:feb1:44d7 with 32 bytes of data:

Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=743ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=623ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=626ms
Reply from 2001:200:dff:fff1:216:3eff:feb1:44d7: time=617ms

Ping statistics for 2001:200:dff:fff1:216:3eff:feb1:44d7:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 617ms, Maximum = 743ms, Average = 652ms

C:\Documents and Settings\Owner>
```

After getting the above message, it means the IPv6 service has been activated successfully.

3. Connect to the website for IPv6. Open a web browser and type an URL of IPv6, e.g., [www.kame.net](http://www.kame.net). If your computer accesses into the website by using IPv6 address, you may see a turtle dancing on the screen. If not, only a steady turtle will be seen.

If you can see a turtle dancing on the screen, that means IPv6 service is ready for you to access and utilize.

## 3.2 How can I get the files from USB storage device connecting to Vigor router?

Files on USB storage device can be reviewed by opening **USB Application >> File Explorer**. If it is necessary for you to delete, copy files on the device or write, paste files to the device, it must be done through or FTP server.

1. Plug the USB device to the USB port on the router. Make sure **Disk Connected** appears on the **Connection Status** as the figure shown below:

USB Application >> USB Disk Status

Disk	Modem	Printer	Sensor
USB Mass Storage Device Status			
Connection Status: <b>Disk Connected</b>			
Write Protect Status: No			
Disk Capacity: 2009 MB			
USB Disk Users Connected			
Index	Service	IP Address(Port)	Username

Note: If the write protect switch of USB disk is turned on, the USB disk is in READ-ONLY mode. No data can be written to it.

2. Setup a user account for the FTP service by using **USB Application >> USB User Management**. Click **Enable** to enable FTP User account. Here we add a new account "user1" and assign authorities "Read", "Write" and "List" to it.

USB Application >> USB User Management

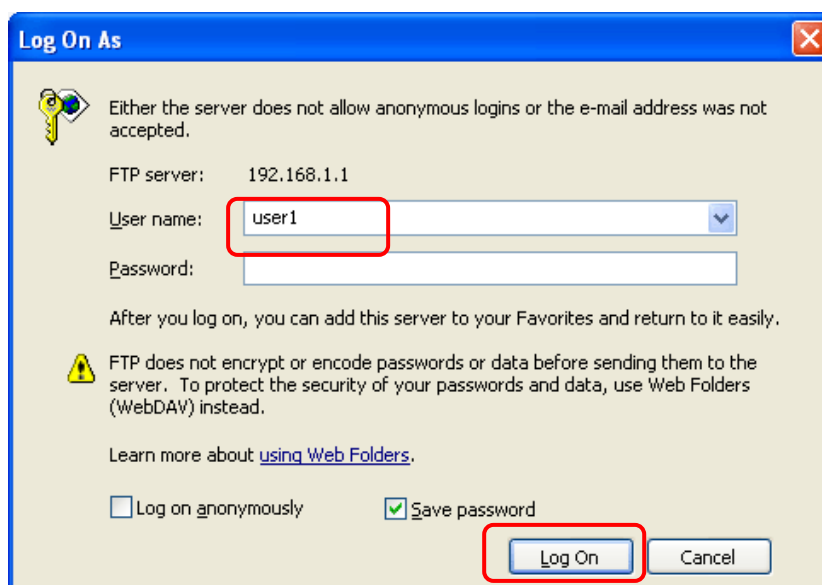

Profile Index: 1

FTP	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Username	<input type="text" value="user1"/>
Password	<input type="password"/> (Maximum 11 Characters)
Confirm Password	<input type="password"/>
Home Folder	<input type="text"/>
Access Rule	
File	<input checked="" type="checkbox"/> Read <input checked="" type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input checked="" type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

Note: The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - \_ @ ~ ` ! ( ) / and space.

OK Clear Cancel

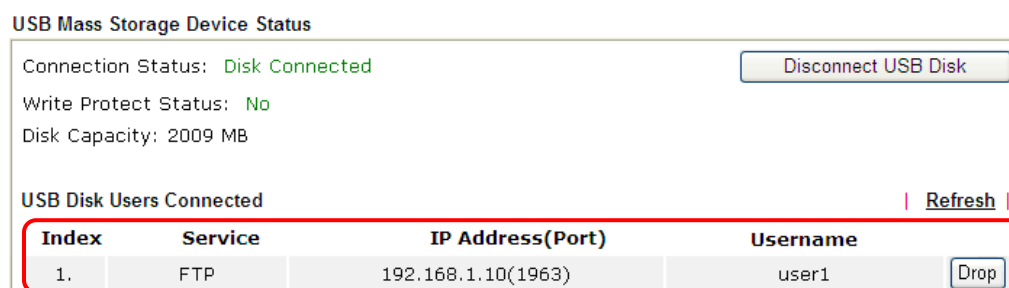

3. Click **OK** to save the configuration.
4. Make sure the FTP service is running properly. Please open a browser and type <ftp://192.168.1.1>. Use the account "user1" to login.

5. When the following screen appears, it means the FTP service is running properly.

6. Return to **USB Application >> USB Disk Status**. The information for FTP server will be shown as below.

Now, users in LAN of Vigor2132FVn can access into the USB storage device by typing ftp://192.168.1.1 on any browser. They can add or remove files / directories, depending on the Access Rule for FTP account settings in **USB Application >>USB User Management**.

### 3.3 How to Build a LAN-to-LAN VPN Between Remote Office and Headquarter via IPSec Tunnel (Main Mode)

#### Configuration on Vigor Router for Head Office

1. Log into the web user interface of Vigor router.
2. Open **VPN and Remote Access>>LAN to LAN** to create a LAN-to-LAN profile.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles:

[Set to Factory Default](#)

Index	Name	Active	Status	Index	Name	Active	Status
<a href="#">1.</a>	???	<input type="checkbox"/>	---	<a href="#">17.</a>	???	<input type="checkbox"/>	---
<a href="#">2.</a>	???	<input type="checkbox"/>	---	<a href="#">18.</a>	???	<input type="checkbox"/>	---
<a href="#">3.</a>	???	<input type="checkbox"/>	---	<a href="#">19.</a>	???	<input type="checkbox"/>	---
<a href="#">4.</a>	???	<input type="checkbox"/>	---	<a href="#">20.</a>	???	<input type="checkbox"/>	---
<a href="#">5.</a>	???	<input type="checkbox"/>	---	<a href="#">21.</a>	???	<input type="checkbox"/>	---
<a href="#">6.</a>	???	<input type="checkbox"/>	---	<a href="#">22.</a>	???	<input type="checkbox"/>	---

3. Click any index number to open the configuration page. Type a name which is easy for identification for such profile (in this case, type **VPN Server**), and check the box of **Enable This Profile**. For Vigor router will be set as a **server**, the call direction shall be set as **Dial-in** and set 0 as **Idle Timeout**.

VPN and Remote Access >> LAN to LAN

Profile Index : 1

Profile Name <input type="text" value="VPN Server"/>	Call Direction <input type="radio"/> Both <input type="radio"/> Dial-Out <input checked="" type="radio"/> Dial-in
<input checked="" type="checkbox"/> Enable this profile	<input type="checkbox"/> Always on
VPN Dial-Out Through <input type="text" value="WAN1 First"/>	Idle Timeout <input type="text" value="0"/> second(s)
Netbios Naming Packet <input checked="" type="radio"/> Pass <input type="radio"/> Block	<input type="checkbox"/> Enable PING to keep alive
Multicast via VPN <input checked="" type="radio"/> Pass <input type="radio"/> Block	PING to the IP <input type="text"/>
(for some IGMP, IP-Camera, DHCP Relay..etc.)	

#### 2. Dial-Out Settings

4. Now navigate to the next section, **Dial-In Settings** to check PPTP, IPsec Tunnel and L2TP boxes. Check the box of **Specify Remote...** and type the **Peer VPN Server IP** (e.g., 218.242.130.19 in this case). Press the **IKE Pre-Shared Key** button to set the **PSK**; and select **Medium (AH)** or **High (ESP)** as the security method.

3. Dial-In Settings

<b>Allowed Dial-In Type</b> <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> IPsec Tunnel <input checked="" type="checkbox"/> L2TP with IPsec Policy <span>None</span>  <input checked="" type="checkbox"/> Specify Remote VPN Gateway Peer VPN Server IP <span>218.242.130.19</span> or Peer ID <span></span>	<b>IKE Authentication Method</b> <input checked="" type="checkbox"/> Pre-Shared Key <span>IKE Pre-Shared Key</span> <span></span> <input checked="" type="checkbox"/> Digital Signature(X.509) <span>None</span> Local ID <input checked="" type="radio"/> Alternative Subject Name First <input type="radio"/> Subject Name First  <b>IPsec Security Method</b> <input checked="" type="checkbox"/> Medium(AH) High(ESP) <input checked="" type="checkbox"/> DES <input checked="" type="checkbox"/> 3DES <input checked="" type="checkbox"/> AES	Username <span>???</span> Password <span></span> VJ Compression <input type="radio"/> On <input checked="" type="radio"/> Off
--	---	---

4. Gre over IPsec Settings

5. Continue to navigate to the **TCP/IP Network Settings** for setting the LAN IP for remote side.

My WAN IP <span>0.0.0.0</span>	RIP Direction <span>Disable</span>
Remote Gateway IP <span>0.0.0.0</span>	From first subnet to remote network, you have to do
Remote Network IP <span>192.168.1.0</span>	<span>Route</span>
Remote Network Mask <span>255.255.255.0</span>	<input type="checkbox"/> Change default route to this VPN tunnel ( Only single WAN supports this )
Local Network IP <span>192.168.1.9</span>	
Local Network Mask <span>255.255.255.0</span>	
<span>More</span>	

OK Clear Cancel

6. Click **OK** to save the settings.

- Open **VPN and Remote Access>>Connection Management** to check the dial-in connection status (from branch office).

VPN and Remote Access >> Connection Management

Dial-out Tool Refresh Seconds : 5

VPN Connection Status

Current Page: 1 Page No.   >>

xxxxxxx : Data isn't encrypted.

## Configuration on Vigor Router for Branch Office

- Log into the web user interface of Vigor router.
- Open **VPN and Remote Access>>LAN to LAN** to create a LAN-to-LAN profile. The following settings are for a permanent VPN connection.

VPN and Remote Access >> LAN to LAN

LAN-to-LAN Profiles: [Set to Factory Default](#)

Index	Name	Active	Status	Index	Name	Active	Status
1.	???	<input type="checkbox"/>	---	17.	???	<input type="checkbox"/>	---
2.	???	<input type="checkbox"/>	---	18.	???	<input type="checkbox"/>	---
3.	???	<input type="checkbox"/>	---	19.	???	<input type="checkbox"/>	---
4.	???	<input type="checkbox"/>	---	20.	???	<input type="checkbox"/>	---
5.	???	<input type="checkbox"/>	---	21.	???	<input type="checkbox"/>	---
6.	???	<input type="checkbox"/>	---	22.	???	<input type="checkbox"/>	---

- Click any index number to open the configuration page. Type a name which is easy for identification for such profile (in this case, type *VPN Client*), and check the box of **Enable This Profile**. For such Vigor router will be set as a **client**, the call direction shall be set as **Dial-out**. Check the box of **Always on** for a permanent VPN connection.

VPN and Remote Access >> LAN to LAN

### 3.4 How to Optimize the Bandwidth through QoS Technology

Have you ever gotten any problems in uploading/downloading files (Voice, video or email/data only) with the narrow/districted bandwidth you may share from the common Internet connection line? The advanced bandwidth management technology-QoS (Quality of Service) helps you to well allocate the bandwidth upon your demand of Voice, Video, or Data transferring. Let's see how to get the optimum bandwidth per your request by using DrayTek Vigor router as below.

Scenario: The Internet connection you got from ISP line is 2MB/512Kb. There are VoIP telephony network, IPTV set top box and data server at your home. Assume you want to allocate 30% of the bandwidth you got to VoIP demand, 50% for IPTV, 15% for mail/data, 5% for others. Let's see how easily it is to do the setting as below:

- Open **Bandwidth Management>> Quality of Service**.

CSM  
Bandwidth Management  
Sessions Limit  
Bandwidth Limit  
Quality of Service  
Applications

- You will get the following page. Click the **Edit** link for **Class 1**.

Bandwidth Management >> Quality of Service

General Setup | Set to Factory Default |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics
WAN1	Disable	100000Kbps/100000Kbps		25%	25%	25%	25%	Inactive	Status <input type="button" value="Setup"/>

Class Rule

Index	Name	Rule	Service Type
Class 1		<input type="button" value="Edit"/>	
Class 2		<input type="button" value="Edit"/>	<input type="button" value="Edit"/>
Class 3		<input type="button" value="Edit"/>	

☒ Enable the First Priority for VoIP SIP/RTP:  
SIP UDP Port:  (Default:5060)

3. In the following page, type a name (e.g., VoIP) for such class and click **Add**.

Bandwidth Management >> Quality of Service

Class Index #1

Name  ☐ Tag packets as: Default

NO	Status	Local Address	Remote Address	DiffServ CodePoint	Service Type
1	Empty	-	-	-	-

4. Check the box of **ACT**. Click **Edit** to specify the local address.

Bandwidth Management >> Quality of Service

Rule Edit

☒ ACT

Ethernet Type ☒ IPv4 ☐ IPv6

Local Address

Remote Address

DiffServ CodePoint

Service Type

Note: Please choose/setup the Service Type first.

5. In the pop-up window, choose **Range Address** as the **Address Type** and type the start IP address and end IP address in relational fields. Click **OK** to save the settings and exit the window.

Ethernet Type: IPv4

Address Type

Start IP Address

End IP Address

Subnet Mask

6. Click **OK** again to save the settings.

Bandwidth Management >> Quality of Service

Rule Edit

☒ ACT

Ethernet Type ☒ IPv4 ☐ IPv6

Local Address

Remote Address

☐ Enable UDP Bandwidth Control Limited\_bandwidth Ratio  %

☐ Outbound TCP ACK Prioritize

[OK](#)
[Clear](#)
[Cancel](#)

11. Click **OK** to save the settings. The class rules for WAN1 are defined as shown below.

Bandwidth Management >> Quality of Service

General Setup | Set to Factory Default |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics
WAN1	Enable	100000Kbps/100000Kbps	Outbound	30%	50%	15%	5%	Inactive	<a href="#">Status</a> <a href="#">Setup</a>

Class Rule

Index	Name	Rule	Service Type
Class 1		<a href="#">Edit</a>	<a href="#">Edit</a>
Class 2		<a href="#">Edit</a>	
Class 3		<a href="#">Edit</a>	

## 3.5 QoS Setting Example

Assume a teleworker sometimes works at home and takes care of children. When working time, he would use Vigor router at home to connect to the server in the headquarter office downtown via either HTTPS or V PN to check email and access internal database. Meanwhile, children may chat on Skype in the restroom.

1. Go to **Bandwidth Management>>Quality of Service**.

Bandwidth Management >> Quality of Service

**General Setup** | [Set to Factory Default](#) |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics
WAN1	Enable	100000Kbps/100000Kbps	Outbound	30%	50%	15%	5%	Inactive	<a href="#">Status</a> <a href="#">Setup</a>

**Class Rule**

Index	Name	Rule	Service Type
Class 1		<a href="#">Edit</a>	<a href="#">Edit</a>
Class 2		<a href="#">Edit</a>	
Class 3		<a href="#">Edit</a>	

2. Click **Setup** link of WAN. Make sure the QoS Control on the left corner is checked. And select **BOTH** in **Direction**.

Bandwidth Management >> Quality of Service

**General Setup**

☒ **Enable the QoS Control** BOTH v

WAN Inbound Bandwidth

WAN Outbound Bandwidth

Index Class Name

3. Set Inbound/Outbound bandwidth.

**General Setup**

☒ **Enable the QoS Control** BOTH v

WAN Inbound Bandwidth 100 Kbps ☒ Mbps

WAN Outbound Bandwidth 100 Kbps ☒ Mbps

Index	Class Name	Reserved_bandwidth Ratio
Class 1		30 %

**Note:** The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

- Return to previous page. Enter the Name of Index Class 1 by clicking **Edit** link. Type the name “**E-mail**” for Class 1. Click **OK** to save the settings.

Bandwidth Management >> Quality of Service

Class Index #1

Service Type	<input type="text" value="--Predefined--"/> <input type="button" value="v"/>
Note: Please choose/setup the <u>Service Type</u> first.	

11. Then click **Edit** of **Local Address** to set a worker's subnet address. Click **Edit** of **Remote Address** to set headquarter's IP address. Leave other fields and click **OK**.

## 3.6 How to use Landing Page Feature

**Landing Page** is a special feature configured under **User Management**. It can specify the message, content to be seen or specify which website to be accessed into when users try to access into the Internet by passing the authentication. Here, we take Vigor2132 Series router as an example.

### Example 1 : Users can see the message for landing page after logging into Internet successfully

1. Open the web user interface of Vigor2132FVn.
2. Open **User Management -> General Setup** to get the following page. In the field of **Landing Page**, please type the words of “**Login Success**”. Please note that the maximum number of characters to be typed here is 255.

#### User Management >> General Setup

##### General Setup

Mode:

Display IP Address on tracking window:

Web Authentication:

**Notice :**

1. User Management will refer to active rules in Data Filter as whitelists and blacklists in user-based firewall mode.
2. Users match the above lists will not be required for authentication. The firewall rules policy will still valid.
3. Otherwise, authentication required for users not matched the above lists. The firewall rules designated in the user profile's policy will still valid.

**Landing Page** (Max 255 characters) [Preview](#) [Set to Factory Default](#)

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

3. Now you can enable the **Landing Page** function. Open **User Management -> User Profile** and click one of the index number (e.g., index number 3) links.

#### User Management >> User Profile

##### User Profile Table

### 3.7 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open **Object Settings>>SMS/Mail Server Object** to get the following page.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	<a href="#">Set to Factory Default</a>
Index	Profile Name	SMS Provider	
1.		kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, type the username and password and set the quota that the router can send the message out.

Object Settings >> SMS / Mail Service Object

Profile Index: 1

Profile Name	<input type="text" value="Local number"/>
Service Provider	<input type="text" value="kotsms.com.tw (TW)"/> ▼
Username	<input type="text" value="abc5026"/>
Password	<input type="password" value="•••"/>
Quota	<input type="text" value="3"/>
Sending Interval	<input type="text" value="3"/> (seconds)

4. After finished the settings, click **OK** to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	<a href="#">Set to Factory Default</a>	
Index	Profile Name	SMS Provider		
1.	Local number	kotsms.com.tw (TW)		
2.		kotsms.com.tw (TW)		
3.		kotsms.com.tw (TW)		
4.		kotsms.com.tw (TW)		
5.		kotsms.com.tw (TW)		
6.		kotsms.com.tw (TW)		
7.		kotsms.com.tw (TW)		
8.		kotsms.com.tw (TW)		
9.	Custom 1			
10.	Custom 2			

5. Open **Object Settings>>Notification Object** to configure the event conditions of the notification.

Object Settings >> Notification Object

<a href="#">Set to Factory Default</a>		
Index	Profile Name	Settings
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		

6. Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, type the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

Object Settings >> Notification Object

Profile Index: 1

Profile Name	<input type="text" value="WAN_Notify"/>	
Category	Status	
WAN	<input checked="" type="checkbox"/> Disconnected	<input checked="" type="checkbox"/> Reconnected
VPN Tunnel	<input type="checkbox"/> Disconnected	<input type="checkbox"/> Reconnected
Temperature Alert	<input type="checkbox"/> Out of Range	

- After finished the settings, click **OK** to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

| [Set to Factory Default](#) |

Index	Profile Name	Settings
1.	WAN_Notify	WAN
2.		
3.		
4.		
5.		
6.		
7.		
8.		

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, type the phone number in the field of Recipient (the one who will receive the SMS).

Application >> SMS / Mail Alert Service

| [Set to Factory Default](#) |

SMS Provider		Mail Server		
Index	SMS Provider	Recipient	Notify Profile	Schedule(1-15)
1 <input checked="" type="checkbox"/>	1 - Local number	0912345678	1 - WAN_Notify	<input type="text"/> <input type="text"/>
2 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
3 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
4 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
5 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
6 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
7 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
8 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
9 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>
10 <input type="checkbox"/>	1 - Local number	<input type="text"/>	1 - WAN_Notify	<input type="text"/> <input type="text"/>

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

## Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, type the URL string of the SMS provider and type the username and password. After clicking OK, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Object Settings >> SMS / Mail Service Object

Profile Index: 9

Profile Name	<input type="text" value="Custom 1"/>
Service Provider	<input type="text" value="clickatell"/>
<div></div>	
Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser### &password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg###	
Username	<input type="text" value="ilan123"/>
Password	<input type="password" value="••••••"/>
Quota	<input type="text" value="3"/>
Sending Interval	<input type="text" value="3"/> (seconds)

## 3.8 How to Create an Account for MyVigor

The website of MyVigor (a server located on <http://myvigor.draytek.com>) provides several useful services (such as Anti-Spam, Web Content Filter, Anti-Intrusion, and etc.) to filtering the web pages for the sake of protecting your system.

To access into MyVigor for getting more information, please create an account for MyVigor.

### 3.8.1 Create an Account via Vigor Router

1. Click CSM>> **Web Content Filter Profile**. The following page will appear.

CSM >> Web Content Filter Profile

Web-Filter License

**MyVigor for you**

MyVigor website replaces the VigorPro site as DrayTek's portal site for the latest products and services in network security, including Anti-Virus, Anti-Spam, Web Content Filter... etc. The products and functions that are supported in this site include:

VigorPro Unified Security Firewall series:

- Activation of Commtouch™ GlobalView Web Content Filter license key
- Activation of DT Anti-Virus license key
- Activation of Kaspersky Anti-Virus license key
- Activation of Commtouch™ Anti-Spam license key and membership

Vigor routers (for models that support Commtouch™)

- Activation of Commtouch™ GlobalView Web Content Filter license key

The MyVigor website contains a trial version of Commtouch™ GlobalView Web Content Filter, which allows the users to set filters to block out undesirable web pages in the Internet jungle.

More customer-oriented services are planned for MyVigor site for the near future.

### 3.9 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

The way we can use is to set two rules under **Firewall**. For **Rule 1** of **Set 2** under **Firewall>>Filter Setup** is used as the default setting, we has to create a new rule starting from Filter Rule 2 of Set 2.

1. Access into the web user interface of Vigor router.
2. Open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 2** button.

Firewall >> Filter Setup

Filter Setup <span style="float: right;">  Set to Factory Default  </span>			
Set	Comments	Set	Comments
1.	Default Call Filter	7.	
<b>2.</b>	Default Data Filter	8.	
3.		9.	
4.		10.	
5.		11.	
6.		12.	

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 2

Comments : Default Data Filter

Filter Rule	Active	Comments	Move Up	Move Down
<b>2</b>	<input checked="" type="checkbox"/>	xNetBios -> DNS		<a href="#">Down</a>
3	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
4	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>

3. Check the box of **Check to enable the Filter Rule**. Type the comments (e.g., **block\_all**). Choose **Block If No Further Match** for the **Filter** setting. Then, click **OK**.

Firewall >> Edit Filter Set >> Edit Filter Rule

#### Filter Set 2 Rule 2

☒ Check to enable the Filter Rule

Comments:

Index(1-15) in **Schedule** Setup:  ,  ,  ,

Clear sessions when schedule ON: ☐ Enable

---

Direction:

Source IP:

Destination IP:

Service Type:

Fragments:

---

**Application**

Filter:

Branch to Other Filter Set:

Sessions Control:

Syslog: ☐

**Note:** In default, the router will check the packets starting with Set 2, Filter Rule 2 to Filter Rule 7. If **Block If No Further Match** for is selected for **Filter**, the firewall of the router would check the packets with the rules starting from Rule 3 to Rule 7. The packets not matching with the rules will be processed according to Rule 2.

4. Next, set another rule. Just open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 3** button.
5. Check the box of **Check to enable the Filter Rule**. Type the comments (e.g., **open\_ip**). Click the **Edit** button for **Source IP**.

Firewall >> Edit Filter Set >> Edit Filter Rule

#### Filter Set 2 Rule 3

☒ Check to enable the Filter Rule

Comments:

Index(1-15) in **Schedule** Setup:  ,  ,  ,

Clear sessions when schedule ON: ☐ Enable

---

Direction:

Source IP:

Destination IP:

Service Type:

Fragments:

---

**Application**

Filter:

Branch to Other Filter Set:

Syslog: ☐

6. A dialog box will be popped up. Choose **Range Address** as **Address Type** by using the drop down list. Type 192.168.1.10 in the field of **Start IP**, and type 192.168.1.20 in the field of **End IP**. Then, click **OK** to save the settings. The computers within the range can access into the Internet.

**IP Address Edit**

<b>Address Type</b>	Range Address
Start IP Address	192.168.1.10
End IP Address	192.168.1.20
Subnet Mask	0.0.0.0
Invert Selection	<input type="checkbox"/>
<b>IP Group</b>	None
or <b>IP Object</b>	None
or IP Object	None
or IP Object	None
<b>IPv6 Group</b>	None
or <b>IPv6 Object</b>	None
or IPv6 Object	None
or IPv6 Object	None

OK Close

7. Now, check the content of **Source IP** is correct or not. The action for **Filter** shall be set with **Pass Immediately**. Then, click **OK** to save the settings.

Firewall >> Edit Filter Set >> Edit Filter Rule

**Filter Set 2 Rule 3**

☒ Check to enable the Filter Rule  
Comments: open\_ip  
Index(1-15) in **Schedule** Setup: , , ,  
Clear sessions when schedule ON: ☐ Enable

Direction: LAN/RT/VPN -> WAN  
Source IP: 192.168.1.10~192.168.1.20 Edit  
Destination IP: Any Edit  
Service Type: Any Edit  
Fragments: Don't Care

**Application**  
Filter: Action/Profile Pass Immediately  
Branch to Other Filter Set: None

Syslog ☐

8. Both filter rules have been created. Click **OK**.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 2

Comments : Default Data Filter

Filter Rule	Active	Comments	Move Up	Move Down
1	<input checked="" type="checkbox"/>	xNetBios -> DNS		<u>Down</u>
2	<input checked="" type="checkbox"/>	block_all	<u>UP</u>	<u>Down</u>
3	<input checked="" type="checkbox"/>	open_ip	<u>UP</u>	<u>Down</u>
4	<input type="checkbox"/>		<u>UP</u>	<u>Down</u>
5	<input type="checkbox"/>		<u>UP</u>	<u>Down</u>
6	<input type="checkbox"/>		<u>UP</u>	<u>Down</u>
7	<input type="checkbox"/>		<u>UP</u>	

Next Filter Set None 

9. Now, all the settings are configured well. Only the computers with the IP addresses within 192.168.1.10 ~ 192.168.1.20 can access to Internet.

## 3.10 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.

### Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

### URL Content Filter,

Benefits: Free, flexible for customize webpage.

Note: Manual setting (e.g., one keyword for one website.)

## I. Via Web Content Filter

1. Make sure the Web Content Filter (powered by Commtouch) license is valid.

CSM >> Web Content Filter Profile

Web-Filter License

Advance Setting

- Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page  
from 192.168.2.114  
to www.facebook.com/  
that is categorized with [Social Networking]  
has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

## II. Via URL Content Filter

### A. Block the web page containing the word of “Facebook”

- Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
- In the field of **Contents**, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 1

Name	<input type="text" value="Facebook"/>
Contents	<input type="text" value="facebook"/>

**Limit of Contents:** Max 3 Words and 63 Characters.  
Each word should be separated by a single space.

You can replace a character with %HEX.  
Example:  
Contents: backdoo%72 virus keep%20out

Result:  
1. backdoor  
2. virus  
3. keep out

- Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.
- Configure the settings as the following figure.

Profile Index: 1

Profile Name:

Priority:  Log:

**1.URL Access Control**

☒ Enable URL Access Control ☐ Prevent web access from IP address

Action:  Group/Object Selections:

**2.Web Feature**

☐ Enable Restrict Web Feature

Action:  ☐ Cookie ☐ Proxy ☐ Upload **File Extension Profile:**

OK Clear Cancel

- When you finished the above steps, click **OK**. Then, open **Firewall>>General Setup**.
- Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of **URL Content Filter**. Now, users cannot open any web page with the word “facebook” inside.

Firewall &gt;&gt; General Setup

General Setup

General Setup Default Rule

Actions for default rule:	Action/Profile	Syslog
Application	<input type="text" value="Pass"/>	<input type="checkbox"/>
Filter	<input type="text" value="0 / 60000"/>	<input type="checkbox"/>

## B. Disallow users to play games on Facebook

- Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
- In the field of **Contents**, please type *apps.facebook*. Configure the settings as the following figure.

## Objects Setting >> Keyword Object Setup

Profile Index : 2

Name	facebook-apps
Contents	apps.facebook

**Limit of Contents:** Max 3 Words and 63 Characters.  
Each word should be separated by a single space.

You can replace a character with %HEX.  
Example:  
Contents: backdoo%72 virus keep%20out

Result:  
1. backdoor  
2. virus  
3. keep out

OK Clear Cancel

3. Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.
4. Configure the settings as the following figure.

## CSM >> URL Content Filter Profile

Profile Index: 2

Profile Name:	face.apps		
Priority:	Either : URL Access Control First	Log:	None

**1.URL Access Control**

☒ Enable URL Access Control ☐ Prevent web access from IP address

Action:

**2.Web Feature**

☐ Enable Restrict Web Feature

Action:  ☐ Cookie ☐ Proxy ☐ Upload File Extension Profile:

OK Clear Cancel

5. When you finished the above steps, please open **Firewall>>General Setup**.

- Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word “facebook” inside.

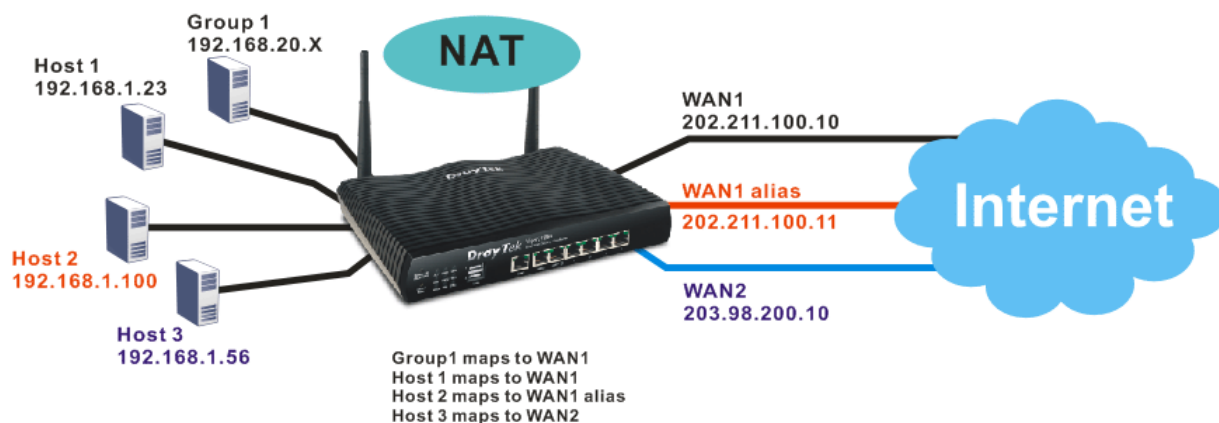

Firewall >> General Setup

#### General Setup

Quality of Service	None	<input type="checkbox"/>
Load-Balance policy	Auto-Select	<input type="checkbox"/>
User Management	None	<input type="checkbox"/>
APP Enforcement	None	<input type="checkbox"/>
URL Content Filter	2-face.apps	<input type="checkbox"/>
Web Content Filter	None	<input type="checkbox"/>

## 3.11 How to Setup Address Mapping

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

Suppose the WAN settings for a router are configured as follows:

WAN1: 202.211.100.10, WAN1 alias: 202.211.100.11

WAN2: 203.98.200.10

Without address mapping feature, when a NAT host with an IP say "192.168.1.10" sends a packet to the WAN side (or the Internet), the source address of the NAT host will be mapped into either 202.211.100.10 or 203.98.200.10 (which IP or mapping is decided by the internal load balancing algorithm).

With address mapping feature, you can manually configure any host mapping to any WAN interface to fit the request. In the above example, you can configure NAT Host 1 to always map to 202.211.100.10 (WAN1); Host 2 to always map to 202.211.100.11 (WAN1 alias); Host 3 always map to 203.98.200.10 (WAN2) and Group 1 to always map to 202.211.100.10 (WAN1).

NAT Address Mapping function lets you specify the outgoing IP address(es) for one internal IP address or a block of internal IP addresses.

We will take an example to introduce how to make use of this feature.

1. Log into the web user interface of Vigor2132FVn.
2. Open **WAN>>Internet Access**. For WAN1, choose **Static or Dynamic IP** as the **Access Mode**.

### WAN >> Internet Access

#### Internet Access

Index	Display Name	Physical Mode	Access Mode	
WAN1		Ethernet	Static or Dynamic IP	<a href="#">Details Page</a> <a href="#">IPv6</a>

[Advanced](#) You can configure DHCP client options here.

- Click the **Details Page** of WAN 1 to open the following page. From the above figure, set main WAN IP address as 202.211.100.10.

#### WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<b>Keep WAN Connection</b> <input type="checkbox"/> Enable PING to keep alive PING to the IP: <input type="text"/> PING Interval: <input type="text"/> minute(s) <b>WAN Connection Detection</b> Mode: <input type="text" value="ARP Detect"/> Ping IP: <input type="text"/> TTL: <input type="text"/> <b>MTU</b> <input type="text" value="1442"/> (Max:1500) <b>RIP Protocol</b> <input type="checkbox"/> Enable RIP	<b>WAN IP Network Settings</b> <span style="border: 1px solid red; padding: 2px;">WAN IP Alias</span> <input type="radio"/> Obtain an IP address automatically Router Name: <input type="text" value="Vigor"/> * Domain Name: <input type="text"/> * <small>* : Required for some ISPs</small> <b>DHCP Client Identifier for some ISP</b> <input type="checkbox"/> Enable Username: <input type="text"/> Password: <input type="text"/> <div style="border: 1px solid red; padding: 5px;"> <input checked="" type="radio"/> Specify an IP address          IP Address: <input type="text" value="202.211.100.10"/>          Subnet Mask: <input type="text" value="255.255.255.0"/>          Gateway IP Address: <input type="text"/> </div> <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Specify a MAC Address MAC Address: <input type="text" value="00"/> <input type="text" value="1D"/> <input type="text" value="AA"/> <input type="text" value="AC"/> <input type="text" value="19"/> <input type="text" value="C9"/> <b>DNS Server IP Address</b> Primary IP Address: <input type="text" value="8.8.8.8"/> Secondary IP Address: <input type="text" value="8.8.4.4"/>	

Note: The maximum MTU setting supported is 1406 when hardware acceleration is enabled.

Click the **WAN IP Alias** button to configure the other P address which is 202.211.100.11. Make sure **Join IP NAT Pool** is not checked. Click **OK** to save the settings.

#### WAN1 IP Alias ( Multi-NAT )

- ☐ Wizard Mode: most frequently used settings in three pages  
☒ Advance Mode: all settings in one page

OK

- Now, you bind some specific computers to some WAN IP alias for outgoing traffic.

### 3.12 How to Setup Load Balance for Packets?

The following figure shows a simple application of load balance. WAN1 and WAN2 can be used to access into Internet. The PC in LAN1 can send the data to the remote PC through the specified WAN1.

1. Access into web user interface of Vigor2132FVn series. Open **Route Policy**.

2. From the following web page, simply click index number #1.

Index	Enable	Protocol	Interface	Interface Address	Src IP Start	Src IP End	Dest IP Start	Dest IP End	Dest Port Start	Dest Port End	Move Up	Move Down
1	<input type="checkbox"/>	any	WAN1	---								<a href="#">Down</a>
2	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
3	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
4	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
5	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
6	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
7	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
8	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
9	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>
10	<input type="checkbox"/>	any	WAN1	---							<a href="#">UP</a>	<a href="#">Down</a>

<< 1-10 | 11-20 | 21-30 | 31-40 | 41-50 >> [Next](#) >>

- In the following page, check **Enable**; set Dest IP Start and Dest IP End with 203.65.1.35 and 203.65.1.35; choose WAN1 as the **Interface**; click **default gateway**; do not check **Auto Failover To The Other WAN**.

Load-Balance/Route Policy

7	<input type="checkbox"/>	any	WAN1	---	---	---	---	---	---	---	UP	Down
8	<input type="checkbox"/>	any	WAN1	---	---	---	---	---	---	---	UP	Down
9	<input type="checkbox"/>	any	WAN1	---	---	---	---	---	---	---	UP	Down
10	<input type="checkbox"/>	any	WAN1	---	---	---	---	---	---	---	UP	Down

<< 1-10 | 11-20 | 21-30 | 31-40 | 41-50 >>

Next >>

OK

Now, the packets sent to the remote PC (IP address: 203.65.1.35) will be forcefully to pass through WAN1.

### 3.13 How to Authenticate Clients via User Management

Before using the function of User Management, please make sure **User-Based** has been selected as the **Mode** in the **User Management>>General Setup** page.

#### User Management >> General Setup

##### General Setup

Mode: Rule-Based User-Based

Display IP: Rule-Based User-Based

Checking window: Off

Web Authentication: HTTPS

**Notice :**

1. User Management will refer to active rules in Data Filter as whitelists and blacklists in user-based firewall mode.
2. Users match the above lists will not be required for authentication. The firewall rules policy will still valid.
3. Otherwise, authentication required for users not matched the above lists. The firewall rules designated in the user profile's policy will still valid.

**Landing Page** (Max 255 characters) Preview Set to Factory Default

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

OK Clear Cancel

With **User Management** authentication function, before a valid username and password have been correctly supplied, a particular client will not be allowed to access Internet through the router. There are three ways for authentication: **Web**, **Telnet** and **Alert Tool**.

## Authentication via Web

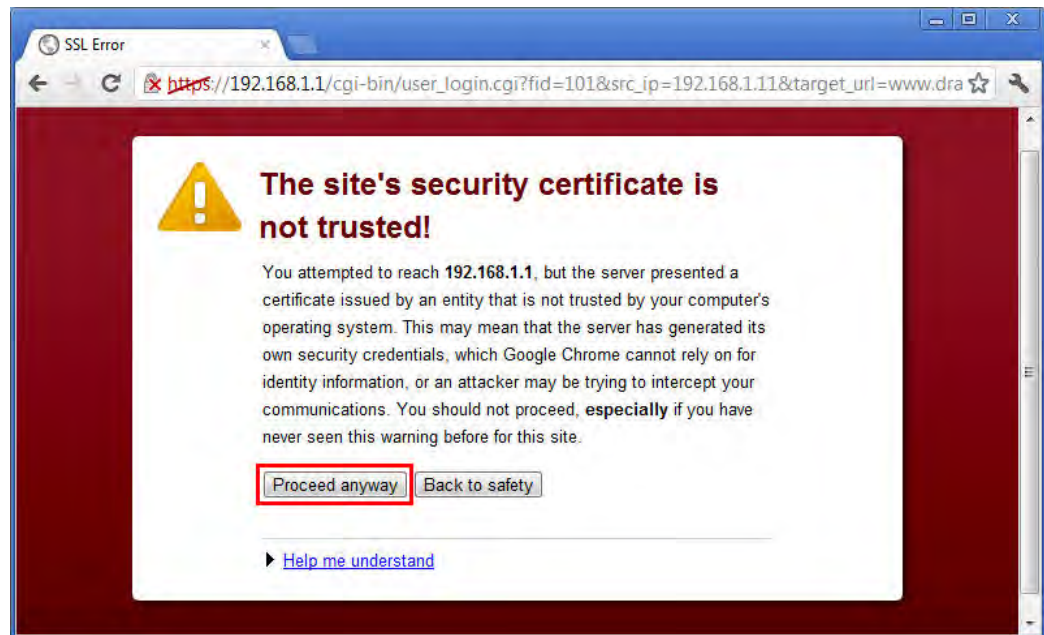

- If a LAN client who hasn't passed the authentication opens an external web site in his browser, he will be redirected to the router's Web authentication interface first. Then, the client is trying to access <http://www.draytek.com> and but brought to the Vigor router. Since this is an SSL connection, some web browsers will display warning messages.
  - With Microsoft Internet Explorer, you may get the following warning message. Please press **Continue to this website (not recommended)**.

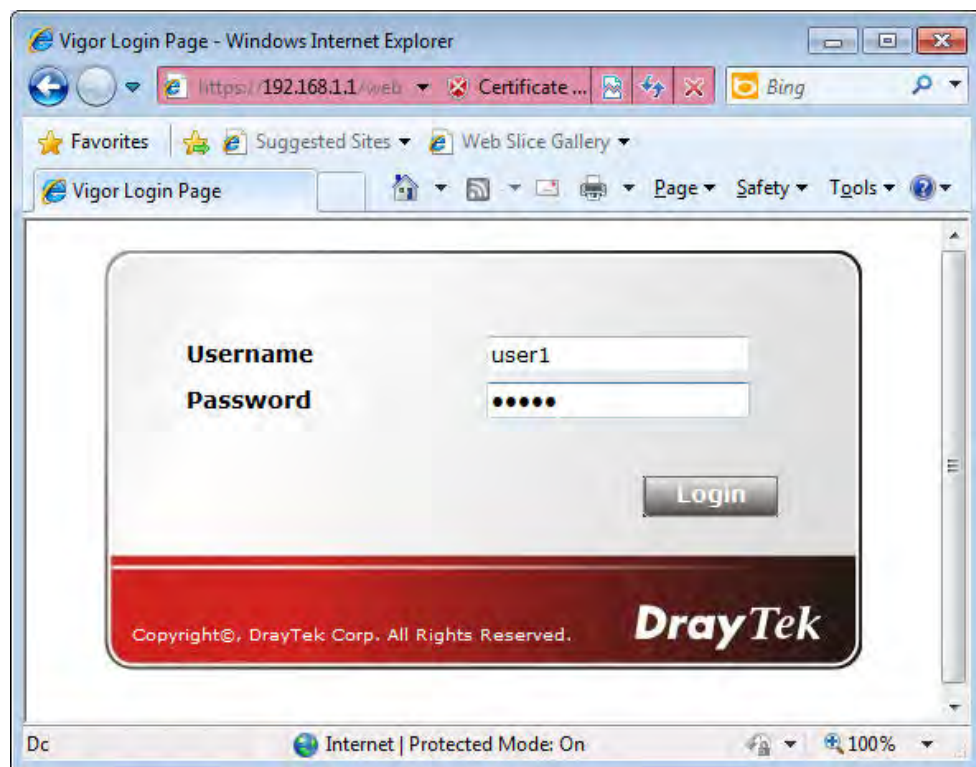

- With Mozilla Firefox, you may get the following warning message. Select **I Understand the Risks**.

- With Chrome browser, you may get the following warning. Click **Proceed anyway**.

After that, the web authentication window will appear. Input the user name and the password for your account (defined in **User Management**) and click **Login**.

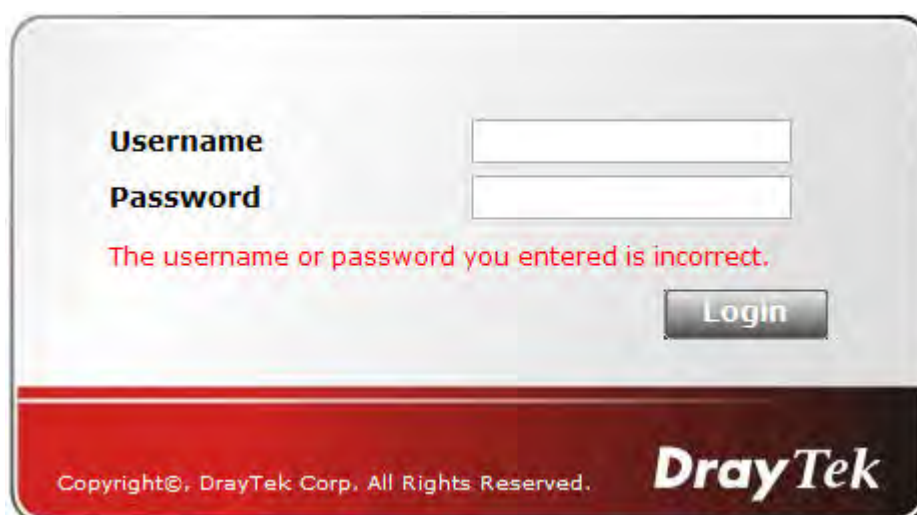

If the authentication is successful, the client will be redirected to the original web site that he tried to access. In this example, it is <http://www.draytek.com> . Furthermore, you will get a popped up window as the following. Then you can access the Internet.

Note, if you block the web browser to pop up any window, you will not see such window.

If the authentication is failed, you will get the error message, **The username or password you entered is incorrect.** Please login again.

- In above description, you access an external web site to trigger the authentication. You may also directly access the router's Web UI for authentication. Both HTTP and HTTPS are supported, for example <http://192.168.1.1> or <https://192.168.1.1> . Replace 192.168.1.1 with your router's real IP address, and add the port number if the default management port has been modified.

If the authentication is successful, you will get the **Welcome Message** that is set in the **User Management >> General Setup** page.

#### User Management >> General Setup

### General Setup

Mode: Rule-Based

Display IP: Rule-Based User-Based

```

OK
Clear
Cancel

With the default setup `<body stats=1><script language='javascript'>window.location='http://www.draytek.com'</script></body>`, you will be redirected to <http://www.draytek.com> . You may change it if you want. For example, you will get the following welcome message if you enter **Login Successful** in the **Welcome Message** table.

Also you will get a **Tracking Window** if you don't block the pop-up window.

- Don't setup a user profile in **User Management** and a VPN Remote Dial-in user profile with the same Username. Otherwise, you may get unexpected result. It is because the VPN Remote Dial-in User profiles can be extended to the User profiles in User Management for authentication.

There are two different behaviors when a User Management account and a VPN profile share the same Username:

- If **SSL Tunnel** or **SSL Web Proxy** is enabled in the VPN profile, the user profile in User Management will always be invalid for Web authentication. For example, if you create a user profile in User Management with **chaochen/test** as username/password, while a VPN Remote Dial-in user profile with the same username "chaochen" but a different password "1234", you will always get error message **The username or password you entered is incorrect** when you use **chaochen/test** via Web to do authentication.

VPN and Remote Access >> Remote Dial-in User

Index No. 1

- If **SSL Tunnel** or **SSL Web Proxy** is disabled in the VPN profile, a User Management account and a remote dial-in VPN profile can use the same Username, even with different passwords. However, we recommend you to use different usernames for different user profiles in User Management and VPN profiles.

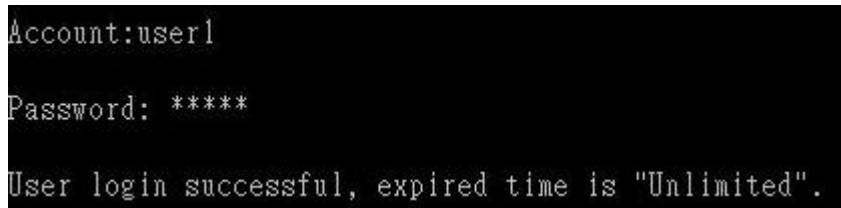

## Authentication via Telnet

The LAN clients can also authenticate their accounts via telnet.

1. Telnet to the router's LAN IP address and input the account name for the authentication:

2. Type the password for authentication and press **Enter**. The message **User login successful** will be displayed with the expired time (if configured).

**Note:** Here **expired time** is “Unlimited” means the **Time Quota** function is not enabled for this account. After login, this account will not be expired until it is logout.

3. In the Web interface of router, the configuration page of **Time Quota** is shown as below.

User Management >> User Profile

---

**Profile Index 3**

You will get the following message. The expired time is shown after you login.

```
Account:user1
Password: *****
User login successful, expired time is "12-23 10:21:33".
```

After you run out the available time, you can't use this account any more until the administrator manually adds additional time for you.

Authentication via Web or Telnet is convenient for users; however, it has some limitations. The most advantage with VigorPro Alert Notice Tool to operate the authentication is the ability to do **auto login**. If the timeout value set on the router for the user account has been reached, the router will stop the client computer from accessing the Internet until it does an authentication again. Authentication via VigorPro Alert Notice Tool allows user to setup the re-authentication interval so that the utility will send authentication requests periodically. This will keep the client hosts from having to manually authenticate again and again.

1. Click **Authenticate Now!!** to start the authentication immediately.

- Any modification to the Firewall policy will break down the connections of all current users. They all have to authenticate again for Internet access.
- The administrator may check the current users from **User Online Status** page.

Total Number : 1

## 3.14 How to use DNS Filter

The DNS Filter monitors DNS queries on UDP port 53 and will pass the DNS query information to the WCF (web content filter) to help with categorizing HTTPS URL's.

**Note:** For DNS filter must use the WCF service profile to filter the packets, therefore WCF license must be activated first. Otherwise, DNS filter does not have any effect on packets.

In the following example, we will block search engine (e.g., www.google.com) and social networking website (e.g., https://facebook.com).

1. Open **CSM>>Web Content Filter Profile** to set the categories. Make sure **WCF License** has already been activated.

CSM >> Web Content Filter Profile

### Web-Filter License

[Activate](#)

[Status: **CommTouch**] [Start Date: **2013-10-26** Expire Date: **2013-11-25**]

- Click **OK** to save the configuration.
- A message box will appear. It's a message which reminds that the priority of URL Content Filter is higher than Web Content Filter. Just press **OK** button to continue.

- Open **CSM>>DNS Filter**. Enable the DNS filter; choose **Block** as the Syslog; choose **WCF-1 Default**.

CSM >> DNS Filter

DNS Filter Profile Table

[Set to Factory Default](#)

Profile	Name	Profile	Name
1.		5.	
2.		6.	
3.		7.	
4.		8.	

DNS Filter General Setting

DNS Filter	<input checked="" type="checkbox"/> Enable
Syslog	Block ▼
Service(WCF)	WCF-1 Default ▼
Service(UCF)	None ▼
Cache Time(hour)	1 ▼
Enable Block Page	<input checked="" type="checkbox"/> Enable

- Click **OK** to save the DNS filter configuration.

Now, all settings about blocking search engine and social website are complete. Please try to access into [www.google.com](http://www.google.com) (the search engine) to see the result.

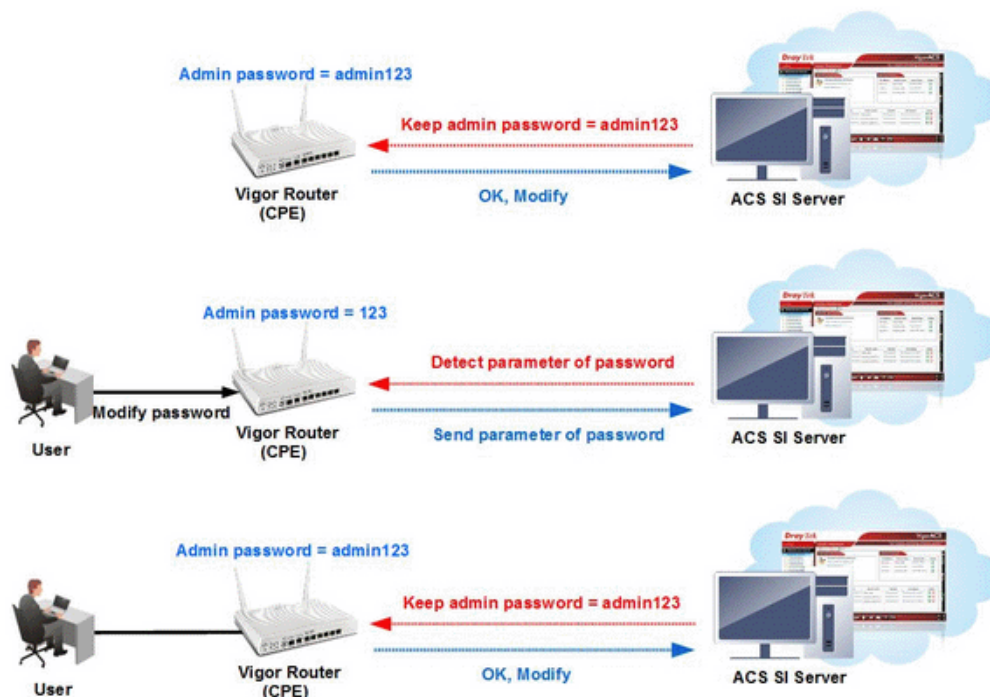

From the Syslog, we can find out “google” is blocked.

### 3.15 How to prevent CPE's settings from being changed by the end-users?

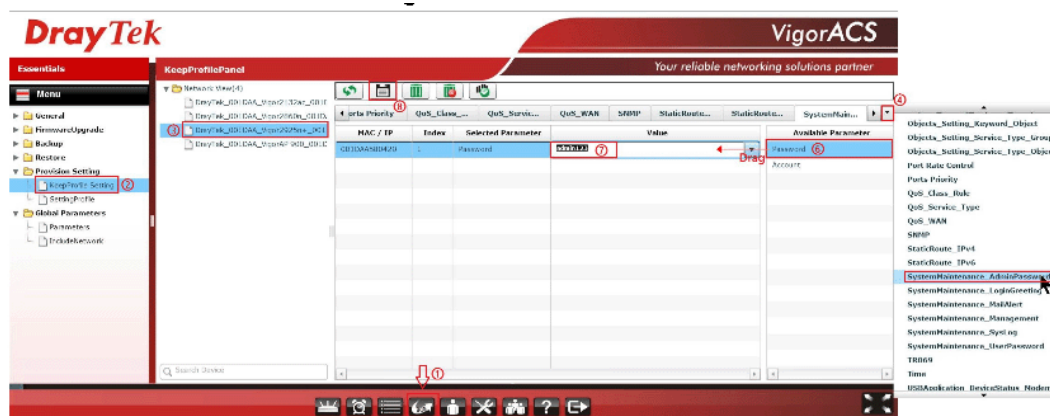

Sometimes network administrator does not wish end-users to change the configuration of CPE device. VigorACS (the administrator) server could use the KeepProfile Setting in the Provision page to always keep the parameter as original.

This document will demonstrate how to keep the admin123 as admin password via ACS SI.

#### Keep Profile Setup on VigorACS SI

##### 1. Setup the parameter in KeepProfile Setting

- Go to Provision page
- Click Provision Setting >> KeepProfile Setting
- From Network View, select the device which network administrator want to keep the setting
- Click on drop menu to select on the setting menu, and choose SystemMaintenance \_AdminPassword

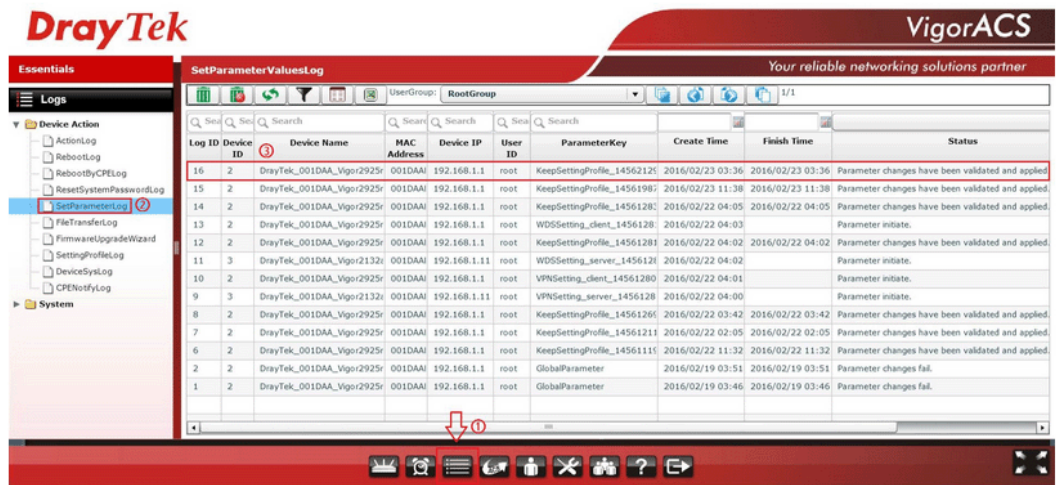

- Click Password parameter then drag it to left block
- Type admin123 in Value field
- Click Save button to save the setting

2. ACS server will pop up “Save Success” window.

3. Check ACS log: Go to Log page, select Device Action >> SetParameterLog, and we could see there's one log says that parameter has been applied.

## Verifying

1. Go to the CPE router, login with the password (admin123) set in KeepProfile Setting, and it could login successfully.

- Try to modify the admin password to 123, then check whether ACS server will detect the changes and keep the original setting.

#### System Maintenance >> Administrator Password Setup

##### Administrator Password

Old Password	*****	
New Password	***	(Max. 23 characters allowed)
Confirm Password	***	(Max. 23 characters allowed)

Note: Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( )

- Wait a period of time for CPE inform. Then from the ACS log, we will find ACS has detected the parameter difference but assigned the original value again.

Log ID	Device ID	Device Name	MAC Address	Device IP	User ID	ParameterKey	Create Time	Finish Time	Status
21	2	DrayTek_001DAA_Vigor2925r	001DAAE	192.168.1.1	root	KeepSettingProfile_145621	2016/02/23 04:26	2016/02/23 04:26	Parameter changes have been validated and assigned the original value again

## Advanced Configuration

This chapter will guide users to execute advanced (full) configuration through admin mode operation.

1. Open a web browser on your PC and type **http://192.168.1.1**. The window will ask for typing username and password.
2. Please type “admin/admin” on Username/Password for administration operation.

Now, the **Main Screen** will appear. Note that “Admin mode” will be displayed on the bottom left side.

### 4.1 WAN

**Quick Start Wizard** offers user an easy method to quick setup the connection mode for the router. Moreover, if you want to adjust more settings for different WAN modes, please go to WAN group.

#### 4.1.1 Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as **private** IP addresses, and are listed in the following ranges:

**From 10.0.0.0 to 10.255.255.255**

**From 172.16.0.0 to 172.31.255.255**

**From 192.168.0.0 to 192.168.255.255**

## What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

## Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

## Network Connection by 3G/4G USB Modem

For 3G/4G mobile communication through Access Point is popular more and more, Vigor2132FVn adds the function of 3G network connection for such purpose. By connecting 3G USB Modem to the USB port of Vigor2132FVn, it can support HSDPA/UMTS/EDGE/GPRS/GSM and the future 3G standard (HSUPA, etc). Vigor2132FVn with 3G/4G USB Modem allows you to receive 3G signals at any place such as your car or certain location holding outdoor activity and share the bandwidth for using by more people. Users can use four LAN ports on the router to access Internet. Also, they can access Internet via 802.11n wireless function of Vigor2132FVn, and enjoy the powerful firewall, bandwidth management, VPN features of Vigor2132FVn series.

After connecting into the router, 3G/4G USB Modem will be regarded as the third WAN port. However, the original WAN1 and WAN2 still can be used and Load-Balance can be done in the router. Besides, 3G/4G USB Modem in WAN3 also can be used as backup device. Therefore, when WAN1 and WAN2 are not available, the router will use 3.5G for supporting automatically. The supported 3G/4G USB Modem will be listed on DrayTek web site. Please visit [www.draytek.com](http://www.draytek.com) for more detailed information.

Below shows the menu items for WAN.

## 4.1.2 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN1 in details.

### WAN >> General Setup

Index	Enable	Physical Mode/Type
<u>WAN1</u>	V	Ethernet/AUTO

OK

Available settings are explained as follows:

Item	Description
<b>Index</b>	Click the WAN interface link under Index to access into the WAN configuration page.
<b>Enable</b>	V means such WAN interface is enabled and ready to be used.
<b>Physical Mode / Type</b>	Display the physical mode and physical type of such WAN interface (Ethent/Fiber/AUTO).

Click WAN1 link to get the following setting page.

### WAN >> General Setup

#### WAN 1

Enable:	Yes <input type="button" value="v"/>
Display Name:	<input type="text"/>
Physical Mode:	Ethernet
Physical Type:	10M half duplex <input type="button" value="v"/>
VLAN Tag insertion :	Enable <input type="button" value="v"/> (Please configure Internet Access setting first)
Tag value:	<input type="text"/> (0~4095)
Priority:	<input type="text"/> (0~7)

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Choose <b>Yes</b> to invoke the settings for this WAN interface. Choose <b>No</b> to disable the settings for this WAN interface.
<b>Display Name</b>	Type the description for such WAN interface.
<b>Physical Mode</b>	Display the physical mode of such WAN interface.

<b>Physical Type</b>	You can change the physical type for WAN or choose <b>Auto negotiation</b> for determined by the system.
<b>VLAN Tag insertion</b>	<p><b>Enable</b> – Enable the function of VLAN with tag. The router will add specific VLAN number to all packets on the WAN while sending them out. Please type the tag value and specify the priority for the packets sending by WAN1.</p> <p><b>Disable</b> – Disable the function of VLAN with tag.</p> <p><b>Tag value</b> – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p><b>Priority</b> – Type the packet priority number for such VLAN. The range is from 0 to 7.</p>

After finished the above settings, click **OK** to save the settings.

### 4.1.3 Internet Access

This page allows you to configure the access mode for building Internet connection.

WAN >> Internet Access

#### Internet Access

Index	Display Name	Physical Mode	Access Mode	
WAN1		Ethernet	None	<a href="#">Details Page</a> <a href="#">IPv6</a>

[Advanced](#) You can configure DHCP client options

None  
 PPPoE  
 Static or Dynamic IP  
 PPTP/L2TP

Available settings are explained as follows:

Item	Description
<b>Index</b>	Display the WAN interface.
<b>Display Name</b>	It shows the name of WAN1 that entered in general setup.
<b>Physical Mode</b>	It shows the physical connection for WAN1 according to the real network connection.
<b>Access Mode</b>	Use the drop down list to choose a proper access mode. Then, click <b>Details Page</b> for accessing the settings page to configure the settings.
<b>Details Page</b>	This button will open different web page (based on IPv4) according to the access mode that you choose in WAN interface.
<b>IPv6</b>	<p>This button will open different web page (based on Physical Mode) to setup IPv6 Internet Access Mode for WAN interface.</p> <p>If IPv6 service is active on this WAN interface, the color of “IPv6” will become green.</p>
<b>Advanced</b>	This button allows you to configure DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and

configured.

WAN >> Internet Access

DHCP Client Options Status

Enable	Interface	Option	Type	Data
--------	-----------	--------	------	------

Enable: ☒

Interface: ☐ All ☒ WAN1 ☐ WAN5 ☐ WAN6 ☐ WAN7

Option Number:

Data Type: ☒ ASCII Character (EX: Option:18, Data:/path)  
☐ Hexadecimal Digit (EX: Option:18, Data:2f70617468)  
☐ Address List (EX: Option:44, Data:172.16.2.10,172.16.2.20...)

Data:

**Note:**  
Option 61 has been given a default value.  
You can configure option 61(Client Identifier) in "WAN >> Internet Access" page.  
If you choose to configure option 61 here, the settings in "WAN >> Internet Access, Details Page" will be overwritten.  
Option 12 is reserved, you cannot configure it here but you can configure it in "Router Name" field of "WAN >> Internet Access".

**Enable/Disable** – Enable/Disable the function of DHCP Option. Each DHCP option is composed by an option number with data. For example,

Option number: 100

Data: abcd

When such function is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

**Interface** – Specify the WAN interface(s) that will be overwritten by such function. WAN5 ~ WAN7 can be located under **WAN>>Multi-VLAN**.

**Option Number** – Type a number for such function.

**Note:** If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

**Data Type** – Choose the type (ASCII or Hex) for the data to be stored.

**Data** – Type the content of the data to be processed by the function of DHCP option.

## Details Page for PPPoE

To use **PPPoE** as the accessing protocol of the internet, please click the **PPPoE** tab. The following web page will be shown.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<b>ISP Access Setup</b> Service Name (Optional) <input type="text"/> Username <input type="text"/> Password <input type="text"/> Index(1-15) in <b>Schedule</b> Setup: => <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/> <b>WAN Connection Detection</b> Mode <input type="text" value="ARP Detect"/> Ping IP <input type="text"/> TTL: <input type="text"/> <b>MTU</b> <input type="text" value="1500"/> (Max:1500)	<b>PPP/MP Setup</b> PPP Authentication <input type="text" value="PAP or CHAP"/> Idle Timeout <input type="text" value="1"/> second(s) <b>IP Address Assignment Method (IPCP)</b> <input type="text" value="WAN IP Alias"/> Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP) Fixed IP Address <input type="text"/> <input checked="" type="radio"/> Default MAC Address <input type="radio"/> Specify a MAC Address MAC Address: <input type="text" value="00"/> <input type="text" value="1D"/> <input type="text" value="AA"/> <input type="text" value="C6"/> <input type="text" value="4C"/> <input type="text" value="49"/>	

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable/Disable</b>	Click <b>Enable</b> for activating this function. If you click <b>Disable</b> , this function will be closed and all the settings that you adjusted in this page will be invalid.
<b>ISP Access Setup</b>	<p>Enter your allocated username, password and authentication parameters according to the information provided by your ISP.</p> <p><b>Username</b> – Type in the username provided by ISP in this field. The maximum length of the user name you can set is 63 characters.</p> <p><b>Password</b> – Type in the password provided by ISP in this field. The maximum length of the password you can set is 62 characters.</p> <p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>
<b>WAN Connection Detection</b>	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p><b>Mode</b> – Choose <b>ARP Detect</b> or <b>Ping Detect</b> for the system to execute for WAN detection.</p>

	<p><b>Ping IP</b> – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging.</p> <p><b>TTL (Time to Live)</b> – Displays value for your reference. TTL value is set by telnet command.</p>
<b>MTU</b>	It means Max Transmit Unit for packet.
<b>PPP/MP Setup</b>	<p><b>PPP Authentication</b> – Select <b>PAP only</b> or <b>PAP or CHAP</b> for PPP.</p> <p><b>Idle Timeout</b> – Set the timeout for breaking down the Internet after passing through the time without any action.</p>
<b>IP Address Assignment Method (IPCP)</b>	<p>Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function.</p> <p><b>WAN IP Alias</b> - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using. Type the additional WAN IP address and check the Enable box. Then click <b>OK</b> to exit the dialog.</p>  <p><b>Fixed IP</b> – Click <b>Yes</b> to use this function and type in a fixed IP address in the box of <b>Fixed IP Address</b>.</p> <p><b>Default MAC Address</b> – You can use <b>Default MAC Address</b> or specify another MAC address by typing on the boxes of MAC Address for the router.</p> <p><b>Specify a MAC Address</b> – Type the MAC address for the router manually.</p>

After finishing all the settings here, please click **OK** to activate them.

## Details Page for Static or Dynamic IP

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

### WAN >> Internet Access

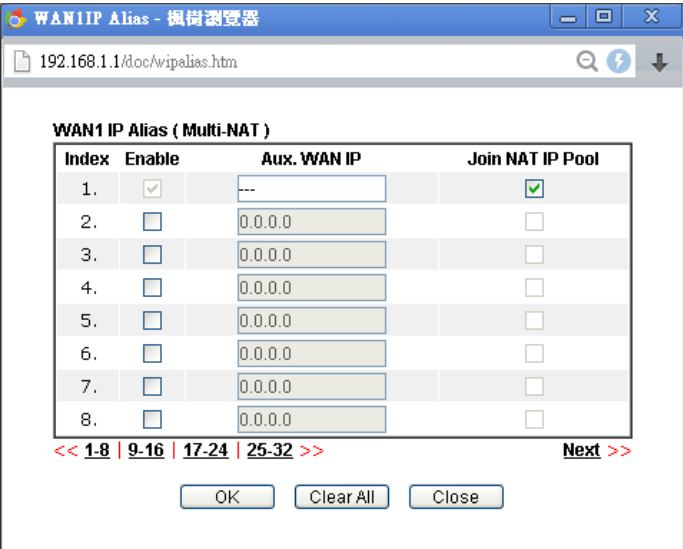

**WAN 1**

\*: Required for some ISPs

Available settings are explained as follows:

Item	Description
Enable / Disable	Click <b>Enable</b> for activating this function. If you click <b>Disable</b> , this function will be closed and all the settings that you adjusted in this page will be invalid.
Keep WAN Connection	Normally, this function is designed for Dynamic IP environments because some ISPs will drop connections if there is no traffic within certain periods of time. Check <b>Enable PING to keep alive</b> box to activate this function. <b>PING to the IP</b> - If you enable the PING function, please specify the IP address for the system to PING it for keeping alive. <b>PING Interval</b> - Enter the interval for the system to execute the PING operation.

<b>WAN Connection Detection</b>	<p>Such function allows you to verify whether network connection is alive or not through ARP Detect or Ping Detect.</p> <p><b>Mode</b> – Choose <b>ARP Detect</b> or <b>Ping Detect</b> for the system to execute for WAN detection.</p> <p><b>Ping IP</b> – If you choose Ping Detect as detection mode, you have to type IP address in this field for pinging.</p> <p><b>TTL (Time to Live)</b> – Displays value for your reference. TTL value is set by telnet command.</p>
<b>MTU</b>	It means Max Transmit Unit for packet.
<b>RIP Protocol</b>	<p>Routing Information Protocol is abbreviated as RIP (RFC1058) specifying how routers exchange routing tables information. Click <b>Enable RIP</b> for activating this function.</p>
<b>WAN IP Network Settings</b>	<p>This group allows you to obtain an IP address automatically and allows you type in IP address manually.</p> <p><b>WAN IP Alias</b> - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p><b>Obtain an IP address automatically</b> – Click this button to obtain the IP address automatically if you want to use <b>Dynamic IP</b> mode.</p> <ul style="list-style-type: none"> <li>● <b>Router Name:</b> Type in the router name provided by ISP.</li> <li>● <b>Domain Name:</b> Type in the domain name that you have assigned.</li> </ul> <p><b>DHCP Client Identifier*</b></p> <ul style="list-style-type: none"> <li>● <b>Enable:</b> Check the box to specify username and password as the DHCP client identifier for some ISP.</li> <li>● <b>Username:</b> Type a name as username. The maximum length of the user name you can set is</li> </ul>

	<p>63 characters.</p> <ul style="list-style-type: none"> <li>● <b>Password:</b> Type a password. The maximum length of the password you can set is 62 characters.</li> </ul> <p><b>Specify an IP address</b> – Click this radio button to specify some data if you want to use <b>Static IP</b> mode.</p> <ul style="list-style-type: none"> <li>● <b>IP Address:</b> Type the IP address.</li> <li>● <b>Subnet Mask:</b> Type the subnet mask.</li> <li>● <b>Gateway IP Address:</b> Type the gateway IP address.</li> </ul> <p><b>Default MAC Address:</b> Click this radio button to use default MAC address for the router.</p> <p><b>Specify a MAC Address:</b> Some Cable service providers specify a specific MAC address for access authentication. In such cases you need to click the <b>Specify a MAC Address</b> and enter the MAC address in the MAC Address field.</p>
<b>DNS Server IP Address</b>	Type in the primary IP address for the router if you want to use <b>Static IP</b> mode. If necessary, type in secondary IP address for necessity in the future.

After finishing all the settings here, please click **OK** to activate them.

## Details Page for PPTP/L2TP

To use **PPTP/L2TP** as the accessing protocol of the internet, please click the **PPTP/L2TP** tab. The following web page will be shown.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<input type="radio"/> Enable PPTP <input type="radio"/> Enable L2TP <input checked="" type="radio"/> Disable Server Address <input type="text"/> Specify Gateway IP Address <input type="text" value="172.16.3.1"/>		<b>PPP Setup</b> PPP Authentication <input type="text" value="PAP or CHAP"/> Idle Timeout <input type="text" value="-1"/> second(s) <b>IP Address Assignment Method (IPCP)</b> <input type="text" value="WAN IP Alias"/> Fixed IP: <input type="radio"/> Yes <input checked="" type="radio"/> No (Dynamic IP) Fixed IP Address <input type="text"/> <b>WAN IP Network Settings</b> <input type="radio"/> Obtain an IP address automatically <input checked="" type="radio"/> Specify an IP address IP Address <input type="text" value="172.16.3.130"/> Subnet Mask <input type="text" value="255.255.255.0"/>	
<b>ISP Access Setup</b> Username <input type="text"/> Password <input type="text"/> Index(1-15) in <b>Schedule</b> Setup: => <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/> MTU <input type="text" value="1460"/> (Max: 1460)			

Available settings are explained as follows:

Item	Description
<b>PPTP/L2TP</b>	<p><b>Enable PPTP</b>- Click this radio button to enable a PPTP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p><b>Enable L2TP</b> - Click this radio button to enable a L2TP client to establish a tunnel to a DSL modem on the WAN interface.</p> <p><b>Disable</b> – Click this radio button to close the connection through PPTP or L2TP.</p> <p><b>Server Address</b> - Specify the IP address of the PPTP/L2TP server if you enable PPTP/L2TP client mode.</p> <p><b>Specify Gateway IP Address</b> – Specify the gateway IP address for DHCP server.</p>
<b>ISP Access Setup</b>	<p><b>Username</b> -Type in the username provided by ISP in this field. The maximum length of the user name you can set is 63 characters.</p> <p><b>Password</b> -Type in the password provided by ISP in this field. The maximum length of the password you can set is 62 characters.</p> <p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

<b>MTU</b>	It means Max Transmit Unit for packet. The default setting is 1460.
<b>PPP Setup</b>	<p><b>PPP Authentication</b> - Select <b>PAP only</b> or <b>PAP or CHAP</b> for PPP.</p> <p><b>Idle Timeout</b> - Set the timeout for breaking down the Internet after passing through the time without any action.</p>
<b>IP Address Assignment Method(IPCP)</b>	<p><b>WAN IP Alias</b> - If you have multiple public IP addresses and would like to utilize them on the WAN interface, please use WAN IP Alias. You can set up to 8 public IP addresses other than the current one you are using.</p>  <p><b>Fixed IP</b> - Usually ISP dynamically assigns IP address to you each time you connect to it and request. In some case, your ISP provides service to always assign you the same IP address whenever you request. In this case, you can fill in this IP address in the Fixed IP field. Please contact your ISP before you want to use this function. Click <b>Yes</b> to use this function and type in a fixed IP address in the box.</p> <p><b>Fixed IP Address</b> -Type a fixed IP address.</p>
<b>WAN IP Network Settings</b>	<p><b>Obtain an IP address automatically</b> – Click this button to obtain the IP address automatically.</p> <p><b>Specify an IP address</b> – Click this radio button to specify some data.</p> <ul style="list-style-type: none"> <li>● <b>IP Address</b> – Type the IP address.</li> <li>● <b>Subnet Mask</b> – Type the subnet mask.</li> </ul>

After finishing all the settings here, please click **OK** to activate them.

## Details Page for IPv6 – Offline

When **Offline** is selected, the IPv6 connection will be disabled.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	PPTP	IPv6
<b>Internet Access Mode</b>			
Connection Type		Offline	

OK Cancel

## Details Page for IPv6 – PPP

During the procedure of IPv4 PPPoE connection, we can get the IPv6 Link Local Address between the gateway and Vigor router through IPv6CP. Later, use DHCPv6 or Accept RA to acquire the IPv6 prefix address (such as: 2001:B010:7300:200::/64) offered by the ISP. In addition, PCs under LAN also can have the public IPv6 address for Internet access by means of the generated prefix.

No need to type any other information for PPP mode.

WAN >> Internet Access

7	9	544	1126

**Note:** At present, the **IPv6 prefix** can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

## Details Page for IPv6 – TSPC

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

### WAN >> Internet Access

#### WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b> Connection Type: <span>TSPC</span>			
<b>TSPC Configuration</b> Username: <input type="text"/> Password: <input type="password"/> Confirm Password: <input type="password"/> Tunnel Broker: <input type="text"/>			
OK		Cancel	

Available settings are explained as follows:

Item	Description
------	-------------

<b>Username</b>	Type the name obtained from the broker. It is suggested for you to apply another username and password for <a href="http://gogonet.gogo6.com/page/freenet6-account">http://gogonet.gogo6.com/page/freenet6-account</a> . The maximum length of the name you can set is 63 characters.
<b>Password</b>	Type the password assigned with the user name. The maximum length of the name you can set is 19 characters.
<b>Confirm Password</b>	Type the password again to make the confirmation.
<b>Tunnel Broker</b>	Type the address for the tunnel broker IP, FQDN or an optional port number.

After finished the above settings, click **OK** to save the settings.

## Details Page for IPv6 – AICCU

WAN >> Internet Access

### WAN 1

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b> Connection Type: <span>AICCU</span>

<input type="button" value="OK"/> <input type="button" value="Cancel"/>			

Available settings are explained as follows:

Item	Description
<b>Identify Association</b>	Choose <b>Prefix Delegation</b> or <b>Non-temporary Address</b> as the identify association.
<b>IAID</b>	Type a number as IAID.

After finished the above settings, click **OK** to save the settings.

## Details Page for IPv6 – Static IPv6

This type allows you to setup static IPv6 address for WAN interface.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6			
<b>Internet Access Mode</b> Connection Type: <span>Static IPv6</span>						
<b>Static IPv6 Address Configuration</b> IPv6 Address: <input type="text"/> / Prefix Length: <input type="text"/> <span>Add</span> <span>Delete</span>						
<b>Current IPv6 Address Table</b> <table border="1"><thead><tr><th>Index</th><th>IPv6 Address/Prefix Length</th><th>Scope</th></tr></thead><tbody></tbody></table>				Index	IPv6 Address/Prefix Length	Scope
Index	IPv6 Address/Prefix Length	Scope				
<b>Static IPv6 Gateway configuration</b> IPv6 Gateway Address: <input type="text"/>						
<span>OK</span> <span>Cancel</span>						

Available settings are explained as follows:

Item	Description
Static IPv6 Address configuration	<b>IPv6 Address</b> – Type the IPv6 Static IP Address. <b>Prefix Length</b> – Type the fixed value for prefix length. <b>Add</b> – Click it to add a new entry. <b>Delete</b> – Click it to remove an existed entry.
Current IPv6 Address Table	Display current interface IPv6 address.
Static IPv6 Gateway Configuration	<b>IPv6 Gateway Address</b> - Type your IPv6 gateway address here.

After finished the above settings, click **OK** to save the settings.

## Details Page for IPv6 – 6in4 Static Tunnel

This type allows you to setup 6in4 Static Tunnel for WAN interface.

Such mode allows the router to access IPv6 network through IPv4 network.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than any cast endpoint. The mode has more reliability.

WAN >> Internet Access

**WAN 1**

PPPoE	Static or Dynamic IP	PPTP/L2TP	IPv6
<b>Internet Access Mode</b>			
Connection Type <span>6in4 Static Tunnel ▼</span>			
<b>6in4 Static Tunnel</b>

### 4.1.4 Multi-VLAN

Multi-VLAN allows users to create profiles for specific WAN interface and bridge connections for user applications that require very high network throughput. Simply go to WAN and select **Multi-VLAN**.

#### General

This page shows the basic configurations used by every channel.

WAN >> Multi-VLAN

##### Multi-VLAN

###### General

Channel	Enable	WAN Type	VLAN Tag	Port-based Bridge			
1	Yes	Fiber(WAN1)	None				
5. WAN5	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4
6. WAN6	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4
7. WAN7	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4
8.	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4
9.	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4
10.	No	Fiber(WAN1)	None	<input type="checkbox"/> Enable	<input type="checkbox"/> P1	<input type="checkbox"/> P2	<input type="checkbox"/> P3 <input type="checkbox"/> P4

**Note:** Channel 2~4 is reserved.

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Channel</b>	Display the number of each channel. Channels 1 is used by the Internet Access web user interface and can not be configured here. Channels 5 ~ 10 are configurable.
<b>Enable</b>	Display whether the settings in this channel are enabled (Yes) or not (No).
<b>WAN Type</b>	Displays the physical medium that the channel will use.
<b>VLAN Tag</b>	Displays the VLAN tag value that will be used for the packets traveling on this channel.
<b>Port-based Bridge</b>	The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. <b>Enable</b> - Check this box to enable the port-based bridge function on this channel. <b>P1 ~ P4</b> – Check the box(es) to build bridge connection on LAN.

Click any index (8, 9 and 10) to get the following web page:

If you choose Management, the configuration for this VLAN will be effective for Web configuration/telnet/TR069.</p> <p><b>IPTV</b> - The IPTV configuration will allow the WAN interface to send IGMP packets to IPTV servers.</p> <p><b>WAN Setup</b> – Choose <b>PPPoE/PPPoA</b> or <b>Static or Dynamic IP</b> to determine what WAN settings must be configured.</p> 
<b>ISP Access Setup, IP Address From ISP, WAN IP Network Settings, DNS Server IP Address</b>	<p>For other settings, refer to <b>Details Page for PPPoE in WAN1</b>.</p>

After finished the above settings, click **OK** to save the settings.

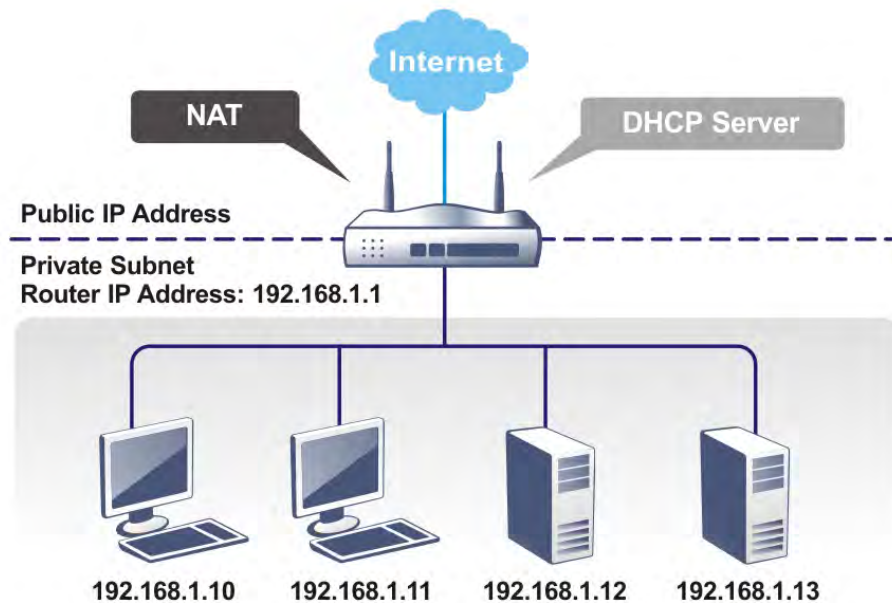

## 4.2 LAN

Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

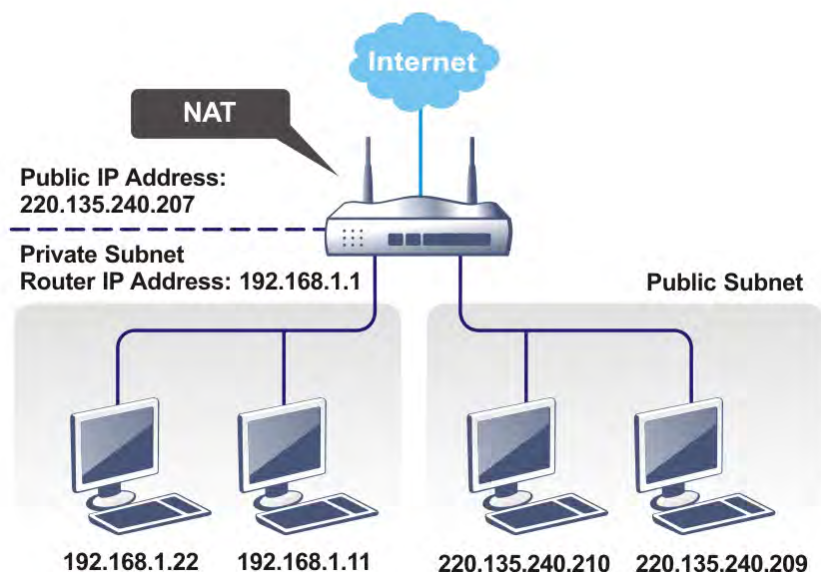

### 4.2.1 Basics of LAN

The most generic function of Vigor router is NAT. It creates a private subnet of your own. As mentioned previously, the router will talk to other public hosts on the Internet by using public IP address and talking to local hosts by using its private IP address. What NAT does is to translate the packets from public IP address to private IP address to forward the right packets to the right host and vice versa. Besides, Vigor router has a built-in DHCP server that assigns private IP address to each local host. See the following diagram for a briefly understanding.

In some special case, you may have a public IP subnet from your ISP such as 220.135.240.0/24. This means that you can set up a public subnet or call second subnet that each host is equipped with a public IP address. As a part of the public subnet, the Vigor router will serve for IP routing to help hosts in the public subnet to communicate with other public hosts or servers outside. Therefore, the router should be set as the gateway for public hosts.

## What is Routing Information Protocol (RIP)

Vigor router will exchange routing information with neighboring routers using the RIP to accomplish IP routing. This allows users to change the information of the router such as IP address and the routers will automatically inform for each other.

## What is Static Route

When you have several subnets in your LAN, sometimes a more effective and quicker way for connection is the **Static routes** function rather than other method. You may simply set rules to forward data from one specified subnet to another specified subnet without the presence of RIP.

## What are Virtual LANs and Rate Control

You can group local hosts by physical ports and create up to 4 virtual LANs. To manage the communication between different groups, please set up rules in Virtual LAN (VLAN) function and the rate of each.

## 4.2.2 General Setup

This page provides you the general settings for LAN. Click **LAN** to open the LAN settings page and choose **General Setup**.

There are four subnets provided by the router which allow users to divide groups into different subnets (LAN1 – LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 – LAN4 can be operated under **NAT** or **Route** mode. IP Routed Subnet can be operated under Route mode.

### LAN >> General Setup

Available settings are explained as follows:

Item	Description
<b>General Setup</b>	<p>Allow to configure settings for each subnet respectively.</p> <p><b>Index</b> - Display all of the LAN items.</p> <p><b>Status</b>- Basically, LAN1 status is enabled in default. LAN2 –LAN5 and IP Routed Subnet can be observed by checking the box of <b>Status</b>.</p> <p><b>DHCP</b>- LAN1 is configured with DHCP in default. If required, please check the DHCP box for each LAN.</p> <p><b>IP Address</b> - Display the IP address for each LAN item. Such information is set in default and you can not modify it.</p> <p><b>Details Page</b> - Click it to access into the setting page. Each LAN will have different LAN configuration page. <b>Each LAN must be configured in different subnet.</b></p> <p><b>IPv6</b> – Click it to access into the settings page of IPv6.</p>

## Advanced

DHCP packets can be processed by adding option number and data information when such function is enabled.

LAN >> General Setup

### DHCP Server Options Status

Options List				
Enable	Interface	Option	Type	Data

Enable: ☒

Interface: ☐ All ☒ LAN1 ☐ LAN2 ☐ LAN3 ☐ LAN4 ☐ IP Routed Subnet

Option Number:

DataType: ☒ ASCII Character (EX :Option:18, Data:/path)  
☐ Hexadecimal Digit (EX: Option:18, Data:2f70617468)  
☐ Address List (EX :Option:44, Data:172.16.2.10,172.16.2.20...)

Data:

#### Note:

1.You can configure option 44,46,and 66 using the "msubnet" telnet command. If you choose to configure option 44,46 or 66 here,the setting made previously using the telnet command will be overwritten.

2.You also can configure option 3 in the "LAN >> General Setup,DHCP Server Configuration" webpage's Gateway IP Address field and configure option 15 in the "Internet Access,DHCP Client" webpage's Domain Name field. If you choose to configure option 3 or 15 here,the setting in web UI will be overwritten.

**Enable/Disable** – Enable/Disable the function of DHCP Option. Each DHCP option is composed by an option number with data. For example,

Option number: 100

Data: abcd

When such function is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

**Interface:** Specify the LAN interface(s) that will be overwritten by such function.

**Option Number** – Type a number for such function.

**Note:** If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

**DataType** – Choose the type (ASCII, Hex or Address) for the data to be stored.

**Data** – Type the content of the data to be processed by the function of DHCP option.

### Force router to use DNS server IP address .....

Force Vigor router to use DNS servers configured in LAN1/LAN2/LAN3/LAN4/LAN5 instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).

### Inter-LAN Routing

Check the box to link two or more different subnets (LAN and LAN).

When you finish the configuration, please click **OK** to save and exit this page.

## Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
<b>Network Configuration</b> For NAT Usage IP Address <input type="text" value="192.168.1.1"/> Subnet Mask <input type="text" value="255.255.255.0"/> RIP Protocol Control <input type="button" value="Disable"/>	<b>DHCP Server Configuration</b> <input checked="" type="radio"/> Enable Server <input type="radio"/> Disable Server <input type="checkbox"/> Enable Relay Agent Start IP Address <input type="text" value="192.168.1.10"/> IP Pool Counts <input type="text" value="200"/> Gateway IP Address <input type="text" value="192.168.1.1"/> Lease Time <input type="text" value="86400"/> (s) <input checked="" type="checkbox"/> Clear DHCP lease for inactive clients periodically. <b>DNS Server IP Address</b> Primary IP Address <input type="text"/> Secondary IP Address <input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Network Configuration</b>	<p><b>For NAT Usage,</b></p> <p><b>IP Address</b> - Type in private IP address for connecting to a local private network (Default: 192.168.1.1).</p> <p><b>Subnet Mask</b> - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24)</p> <p><b>RIP Protocol Control,</b></p> <p><b>Disable</b> - deactivate the RIP protocol. It will lead to a stoppage of the exchange of routing information between routers. (Default)</p> <p><b>Enable</b> – activate the RIP protocol.</p>
<b>DHCP Server Configuration</b>	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p><b>Enable Server</b> - Let the router assign IP address to every host in the LAN.</p> <p><b>Disable Server</b> – Let you manually assign IP address to every host in the LAN.</p> <p><b>Enable Relay Agent</b> –Specify which subnet that DHCP server is located the relay agent should redirect the DHCP request to.</p>

	<p><b>DHCP Server IP Address</b> – It is available when <b>Enable Relay Agent</b> is checked. Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.</p> <p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Gateway IP Address</b> - Enter a value of the gateway IP address for the DHCP server. The value is usually as same as the 1st IP address of the router, which means the router is the default gateway.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Clear DHCP lease for inactive clients periodically</b> - Whenever a DHCP client requests an IP address from the LAN DHCP server, the server will give out an IP to this client for a certain amount of time (e.g., 1 day). However, even if this client only uses the IP for say 5 minutes, the server still "reserves" 1 day for that client. Because a DHCP server only has a limited number of IPs to lease to its DHCP clients, soon enough all the IPs will be used out and then no one will be able to get any IPs from this server anymore. Therefore, this feature is used to get the IP back from inactive clients (i.e. doesn't use the IP but the server still reserves the IP for him).</p>
<b>DNS Server IP Address</b>	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p><b>Primary IP Address</b> - You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. If your ISP does not provide it, the router will automatically apply default DNS Server IP address: 194.109.6.66 to this field.</p> <p><b>Secondary IP Address</b> - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. If your ISP does not provide it, the router will automatically apply default secondary DNS Server IP address: 194.98.0.1 to this field.</p> <p>The default DNS Server IP address can be found via Online Status:</p>

Online Status

Physical Connection

System Uptime: 22:22:45

IPv4

IPv6

LAN Status

Primary DNS: 8.8.8.8

Secondary DNS: 8.8.4.4

IP Address

TX Packets

RX Packets

192.168.1.1

0

41533

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign its own IP address to local users as a DNS proxy server and maintain a DNS cache.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click **OK** to save and exit this page.

## Details Page for LAN1 – IPv6 Setup

There are two configuration pages for LAN1, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

**LAN >> General Setup**

LAN 1 Ethernet TCP / IP and DHCP Setup

OK

It provides 2 daemons for LAN side IPv6 address configuration. One is **Router Advertisement Server** (stateless) and the other is **DHCPv6 Server** (Stateful).

Available settings are explained as follows:

Item	Description
<b>Router Advertisement Server</b>	<p><b>Enable</b> – Click it to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.</p> <p><b>Disable</b> – Click it to disable router advertisement server.</p> <p><b>Advertisement Lifetime</b> - The lifetime associated with the default router in units of seconds. It's used to control the lifetime of the prefix. The maximum value corresponds to 18.2 hours. A lifetime of 0 indicates that the router is not a default router and should not appear on the default router list.</p>
<b>DHCPv6 Server Configuration</b>	<p><b>Enable Server</b> –Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration.</p> <p><b>Disable Server</b> –Click it to disable DHCPv6 server.</p> <p><b>Start IPv6 Address / End IPv6 Address</b> –Type the start and end address for IPv6 server.</p>
<b>DNS Server IPv6 Address</b>	<p><b>Primary DNS Sever</b> – Type the IPv6 address for Primary DNS server.</p> <p><b>Secondary DNS Server</b> –Type another IPv6 address for DNS server if required.</p>
<b>Static IPv6 Address configuration</b>	<p><b>IPv6 Address</b> –Type static IPv6 address for LAN.</p> <p><b>Prefix Length</b> – Type the fixed value for prefix length.</p> <p><b>Add</b> – Click it to add a new entry.</p> <p><b>Delete</b> – Click it to remove an existed entry.</p>
<b>Current IPv6 Address Table</b>	Display current used IPv6 addresses.

When you finish the configuration, please click **OK** to save and exit this page.

--	--

OK

Available settings are explained as follows:

Item	Description
<b>Network Configuration</b>	<p><b>Enable/Disable</b> - Click <b>Enable</b> to enable such configuration; click <b>Disable</b> to disable such configuration.</p> <p><b>For NAT Usage</b> - Click this radio button to invoke NAT function.</p> <p><b>For Routing Usage</b> - Click this radio button to invoke this function.</p> <p><b>IP Address</b> - Type in private IP address for connecting to a local private network (Default: 192.168.1.1).</p> <p><b>Subnet Mask</b> - Type in an address code that determines the size of the network. (Default: 255.255.255.0/ 24)</p>
<b>DHCP Server Configuration</b>	<p>DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network.</p> <p><b>Enable Server</b> - Let the router assign IP address to every host in the LAN.</p> <p><b>Disable Server</b> - Let you manually assign IP address to every host in the LAN.</p> <p><b>Enable Relay Agent</b> - If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p><b>DHCP Server IP Address</b> - It is available when <b>Enable Relay Agent</b> is checked. Set the IP address of the DHCP server you are going to use so the Relay Agent can help to forward the DHCP request to the DHCP server.</p>

	<p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Gateway IP Address</b> - Enter a value of the gateway IP address for the DHCP server. The value is usually as same as the 1st IP address of the router, which means the router is the default gateway.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Retrieve IPs from inactive clients periodically</b> - Whenever a DHCP client requests an IP address from the LAN DHCP server, the server will give out an IP to this client for a certain amount of time (e.g., 1 day). However, even if this client only uses the IP for say 5 minutes, the server still "reserves" 1 day for that client. Because a DHCP server only has a limited number of IPs to lease to its DHCP clients, soon enough all the IPs will be used out and then no one will be able to get any IPs from this server anymore. Therefore, this feature is used to get the IP back from inactive clients (i.e. doesn't use the IP but the server still reserves the IP for him).</p>
<b>DNS Server IP Address</b>	<p>DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address.</p> <p><b>Primary IP Address</b> - You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. If your ISP does not provide it, the router will automatically apply default DNS Server IP address: 194.109.6.66 to this field.</p> <p><b>Secondary IP Address</b> - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. If your ISP does not provide it, the router will automatically apply default secondary DNS Server IP address: 194.98.0.1 to this field.</p> <p>The default DNS Server IP address can be found via Online Status:</p> <p>Online Status</p>  <p>The screenshot shows the 'Online Status' page. At the top, it says 'Physical Connection' and 'System Uptime: 22:22:45'. Below this is a table with two main sections: 'IPv4' and 'IPv6'. Under 'IPv4', there is a 'LAN Status' section showing 'IP Address' as 192.168.1.1, 'TX Packets' as 0, and 'RX Packets' as 41533. To the right of this, it shows 'Primary DNS: 8.8.8.8' and 'Secondary DNS: 8.8.4.4'.</p> <p>If both the Primary IP and Secondary IP Address fields are left empty, the router will assign its own IP address to local users as a DNS proxy server and maintain a DNS cache.</p>

When you finish the configuration, please click **OK** to save and exit this page.

## LAN &gt;&gt; General Setup

Available settings are explained as follows:

**DrayTek**

	<p>If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location.</p> <p><b>Start IP Address</b> - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254.</p> <p><b>IP Pool Counts</b> - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253.</p> <p><b>Lease Time</b> - Enter the time to determine how long the IP address assigned by DHCP server can be used.</p> <p><b>Use LAN Port</b> – Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2.</p> <p><b>Use MAC Address</b> - Check such box to specify MAC address.</p> <p><b>MAC Address:</b> Enter the MAC Address of the host one by one and click <b>Add</b> to create a list of hosts to be assigned, deleted or edited IP address from above pool. Set a list of MAC Address for 2<sup>nd</sup> DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2<sup>nd</sup> subnet won't get an IP address belonging to 1<sup>st</sup> subnet.</p> <p><b>Add</b> – Type the MAC address in the boxes and click this button to add.</p> <p><b>Delete</b> – Click it to delete the selected MAC address.</p> <p><b>Edit</b> – Click it to edit the selected MAC address.</p> <p><b>Cancel</b> – Click it to cancel the job of adding, deleting and editing.</p>
--	---

When you finish the configuration, please click **OK** to save and exit this page.

### 4.2.3 Static Route

Go to **LAN** to open setting page and choose **Static Route**. The router offers IPv4 and IPv6 for you to configure the static route. Both protocols bring different web pages.

#### Static Route for IPv4

LAN >> Static Route Setup

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check it to enable this profile.

<b>Destination IPv6 Address / Prefix Len</b>	Type the IP address with the prefix length for this entry.
<b>Gateway IPv6 Address</b>	Type the gateway address for this entry.
<b>Network Interface</b>	Use the drop down list to specify an interface for this static route.

After finishing all the settings here, please click **OK** to save the configuration.

### Add Static Routes to Private and Public Networks (based on IPv4)

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the **RIP Protocol Control**. Then click the **OK** button.

**Note:** There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **LAN >> Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

LAN >> Static Route Setup

Index No. 1

☒ Enable

Destination IP Address	192.168.1.10
Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.2
Network Interface	LAN1

OK Cancel Delete

- Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3. Click **OK**.

LAN >> Static Route Setup

Index No. 2

☒ Enable

Destination IP Address	211.100.88.0
Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.3
Network Interface	LAN1

OK Cancel Delete

- Go to **Diagnostics** and choose **Routing Table** to verify current routing table.

Diagnostics >> View Routing Table

S~	192.168.10.0/ 255.255.255.0	via 192.168.1.2	LAN1	
C~	192.168.1.0/ 255.255.255.0	directly connected	LAN1	
S~	211.100.88.0/ 255.255.255.0	via 192.168.1.3	LAN1	

## 4.2.4 VLAN

With the 5-port Gigabit switch on the LAN side, Vigor router provides extremely high speed connectivity for the highest speed local data transfer of any server or local PCs. On the wireless-equipped model, each of the wireless SSIDs can also be grouped within one of the VLANs.

### Tagged VLAN

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is **tag-based multi-subnet**.

### Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P1 ~ P4) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

#### LAN >> VLAN Configuration

☒ Permit untagged device in P1 to access router

1. For each VLAN row, if enable is checked for the VLAN Tag then the corresponding VID will be applied to wired LAN traffic.
2. Wireless LAN traffic is always untagged, but will still be a member of the VLAN group selected.
3. Each VID must be unique.

**Note:** Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click it to enable VLAN configuration.
<b>LAN</b>	<b>P1 – P4</b> – Check the LAN port(s) to be grouped under the

	selected VLAN.
<b>Wireless LAN</b>	<b>SSID1 – SSID4</b> – Check the SSID boxes to group them under the selected VLAN.
<b>Subnet</b>	Choose one of them to make the selected VLAN mapping to the specified subnet only. For example, LAN1 is specified for VLAN0. It means that PCs grouped under VLAN0 can get the IP address(es) that specified by the subnet.
<b>VLAN Tag</b>	<p><b>Enable</b> – Check the box to enable the function of VLAN with tag.</p> <p>The router will add specific VLAN number to all packets on the LAN while sending them out.</p> <p>Please type the tag value and specify the priority for the packets sending by LAN.</p> <p><b>VID</b> – Type the value as the VLAN ID number. The range is form 0 to 4095.</p> <p><b>Priority</b> – Type the packet priority number for such VLAN. The range is from 0 to 7.</p>
<b>Permit untagged device in P1 to access router</b>	It can help users to communicate with the router still even though configuring wrong VLAN tag setting. For Vigor router has one LAN physical port only, it is recommended to enable the management port (LAN 1) to ensure the data transmission is unimpeded.

**Note:** Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

Vigor2132 Series features a hugely flexible VLAN system. In its simplest form, each of the Gigabit LAN ports can be isolated from each other, for example to feed different companies or departments but keeping their local traffic completely separated.

To add or remove a VLAN, please refer to the following example.

1. If, VLAN 0 is consisted of hosts linked to P1 and P2 and VLAN 1 is consisted of hosts linked to P3 and P4. VLAN0 and VLAN1 are configured with different subnets.

- After checking the box to enable VLAN function, you will check the table according to the needs as shown below. Click **OK** to save the settings.

#### LAN >> VLAN Configuration

##### VLAN Configuration

The Vigor router also supports up to six private IP subnets on the LAN. Each can be independent (isolated) or common (able to communicate with each other). This is ideal for departmental or multi-occupancy applications.

## 4.2.5 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. When this function is enabled, all the assigned IP and MAC address binding together cannot be changed. If you modified the binding IP or MAC address, it might cause you not access into the Internet.

Click **LAN** and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

**Bind IP to MAC**  
☒ Enable ☐ Disable ☐ Strict Bind

**ARP Table** | [Select All](#) | [Sort](#) | [Refresh](#)

**Add or Update**  
IP Address:   
Mac Address: -----  
Comment:   
☐ Show Comment

**Note:** IP-MAC binding presets DHCP Allocations.  
If you select Strict Bind, unspecified LAN clients cannot access the Internet.

Backup IP Bind List :  Upload From File:

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Click this radio button to invoke this function. However, IP/MAC which is not listed in IP Bind List also can connect to Internet.
<b>Disable</b>	Click this radio button to disable this function. All the settings on this page will be invalid.
<b>Strict Bind</b>	Click this radio button to block the connection of the IP/MAC which is not listed in IP Bind List.
<b>ARP Table</b>	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking <b>Add</b> below.
<b>Select All</b>	Click this link to select all the items in the ARP table.
<b>Sort</b>	Reorder the table based on the IP address.

<b>Refresh</b>	Refresh the ARP table listed below to obtain the newest ARP table information.
<b>Add or Update</b>	<p><b>IP Address</b> – Type the IP address that will be used for the specified MAC address.</p> <p><b>Mac Address</b> – Type the MAC address that is used to bind with the assigned IP address.</p> <p><b>Comment</b> – Type a brief description for the entry.</p> <p><b>Show Comment</b> – Check this box to display the comment on IP Bind List box.</p>
<b>IP Bind List</b>	It displays a list for the IP bind to MAC information.
<b>Add</b>	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in <b>Add and Edit</b> to the table of <b>IP Bind List</b> .
<b>Update</b>	It allows you to edit and modify the selected IP address and MAC address that you create before.
<b>Delete</b>	You can remove any item listed in <b>IP Bind List</b> . Simply click and select the one, and click <b>Delete</b> . The selected item will be removed from the <b>IP Bind List</b> .
<b>Backup</b>	Store the configuration for Bind IP to MAC as a file.
<b>Restore</b>	Restore the previously stored configuration file and apply to such page.

**Note:** Before you select **Strict Bind**, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click **OK** to save the settings.

## 4.2.6 LAN Port Mirror

LAN port mirror can be applied for the users in LAN. Generally speaking, this function copies traffic from one or more specific ports to a target port. This mechanism helps manager track the network errors or abnormal packets transmission without interrupting the flow of data access the network. By the way, user can apply this function to monitor all traffics which user needs to check.

There are some advantages supported in this feature. First, it is more economical without other detecting equipments to be set up. Second, it may be able to view traffic on one or more ports within a VLAN at the same time. Third, it can transfer all data traffics to be mirrored to one analyzer connect to the mirroring port. Last, it is more convenient and easy to configure in user's interface.

### LAN >> LAN Port Mirror

#### LAN Port Mirror

Port Mirror: <input checked="" type="radio"/> Enable <input type="radio"/> Disable					
	Port1	Port2	Port3	Port4	WAN1
Mirror Port		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	
Mirrored Tx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mirrored Rx Port	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**Note:** The mirrored WAN1 is a software mirror, it will lead to a substantial decline in performance.

OK

Available settings are explained as follows:

Item	Description
Port Mirror	Check <b>Enable</b> to activate this function. Or, check <b>Disable</b> to close this function.
Mirror Port	Select a port to view traffic sent from mirrored ports.
Mirrored Tx Port	Select which ports are necessary to be mirrored for transmitting the packets.
Mirrored Rx Port	Select which ports are necessary to be mirrored for receiving the packets.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.2.7 Wired 802.1x

IEEE 802.1x is an IEEE Standard for port-based Network Access Control (PNAC). It is part of the IEEE 802.1 group of networking protocols. It provides an authentication mechanism for the device that is attached to a LAN or WLAN.

Wired 802.1x provides authentication for one network device on each LAN port. The RADIUS Server settings must be configured before enabling 802.1x because the EAP (Extensible Authentication Protocol) Authenticator relies on the RADIUS Server in its authentication process. Each LAN port with Wired 802.1x configured will only forward 802.1x packets and block all other packets until the authentication has successfully completed.

**LAN >> Wired 802.1x**

### Wired 802.1x

LAN 802.1x:

☒ Enable

802.1x ports:

☐ P1☐ P2☐ P3☐ P4

Please note that 802.1x enabled LAN ports will support EAPOL authentication for one network device only. Therefore, 802.1x enabled LAN ports will have issues when connecting to a L2 switch. If you want 802.1x support for multiple network devices, please disable 802.1x here and configure 802.1x on the connecting switch. This feature supports PEAP and EAP-TLS.

OK

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check the box to enable LAN 802.1x function.
<b>802.1x ports</b>	After enabling the function, simply specify the LAN port(s) to apply such function.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.2.8 Web Portal Setup

This page allows you to configure a profile with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router. No matter what the purpose of the wireless/LAN client is, he/she will be forced into the URL configured here while trying to access into the Internet or the desired web page through this router. That is, a company which wants to have an advertisement for its products to users can specify the URL in this page to reach its goal.

### LAN >> Web Portal Setup

#### Web Portal Table:

Profile	Status	Interface	
<a href="#">1.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">2.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">3.</a>	Disable	None	<a href="#">Preview</a>
<a href="#">4.</a>	Disable	None	<a href="#">Preview</a>

**Note:** Internet access must be enabled while webpage redirection is about to enable.

Each item is explained as follows:

Item	Description
Profile	Display the number link which allows you to configure the profile.
Status	Display the content (Disable, URL Redirect or Message) of the profile.
Interface	Display the applied interfaced of the profile.
Preview	Open a preview window according to the configured settings.

To configure the profile, click any index number link to open the following page.

### LAN >> Web Portal Setup

#### Profile Index: 1

☒ Disable

☐ URL Redirect

☐ Message

☐ Force the user to click on the button to proceed

**Note:** If the User Management application is enabled, it will override the Web Portal settings seen here.

Default Message

**Applied Interfaces**

☐ LAN1 ☐ LAN2 ☐ LAN3 ☐ LAN4

☐ SSID1 ☐ SSID2 ☐ SSID3 ☐ SSID4

☐ SSID1 ☐ SSID2 ☐ SSID3 ☐ SSID4

**Note:** URL Redirect may fail to display some web sites (e.g., <http://www.google.com.tw> or <http://tw.yahoo.com>) because of their protection for phishing attack. Please click the "Preview" icon to test it first.

[OK](#) [Cancel](#)

Available settings are explained as follows:

Item	Description
<b>Disable</b>	Click this button to close this function.
<b>URL Redirect</b>	<p>Any user who wants to access into Internet through this router will be redirected to the URL specified here first. It is a useful method for the purpose of advertisement. For example, force the wireless user(s) in hotel to access into the web page that the hotel wants the user(s) to visit.</p> <p><b>Force the user to click on the button to proceed</b> – Check the box to force the user clicking on a special button to proceed the operation of web redirection.</p>
<b>Message</b>	Type words or sentences here. The message will be displayed on the screen for several seconds when the wireless users access into the web page through the router.
<b>Applied Interfaces</b>	<p>Check the box (es) representing different interfaces to be applied by such profile.</p> <p>The advantage is that each LAN (1/2/3/4) interface <b>and/or</b> each SSID (1/2/3/4) for wireless network can be applied with different web portal separately.</p>

After finishing all the settings here, please click **OK** to save the configuration.

## 4.3 Route Policy

**Route Policy** (also well known as PBR, policy-based routing) is a feature where you may need to get a strategy for routing. Then packets will be directed to the specified interface if they match one of the rules. You can setup your routing in various reasons such as load balance, security, routing decision, and etc.

Through protocol, mode, IP address, port number and interface configuration, Route Policy can be used to configure any routing rules to fit actual request. In general, Route Policy can easily reach the following purposes:

- **Auto load balance to reduce the loading of the network traffic.**

You have to manually create policy rules in order to force the traffic going to dedicate network interface.

- **Strict Bind.**

Through dedicated interface (WAN/LAN), the data can be sent from the source IP to the destination IP.

- **Address Mapping.**

Allows you specify the outgoing WAN IP address (es) for an internal private IP address or a block of internal private IP addresses.

- **Other routing.**

Specify routing policy to determine the direction of the data transmission.

**Note:** For more detailed information about using policy route, refer to Support >>FAQ/Application Notes on [www.draytek.com](http://www.draytek.com).

### Route Policy

## How to Customize a Secure Route between VPN Router and Remote Router by Using Route Policy

### Example 1:

In the following figure, a LAN to LAN VPN tunnel is built between DrayTek VPN router (e.g., Vigor2132 series) and the remote router. Firewall Router can receive all of the traffic coming from remote PC which wants to access into Internet; and send back the packets to Remote Router through VPN Router.

1. Establish a **VPN tunnel** between VPN Router and the Remote Router.
2. Change to default route for the router located in Remote Router.
3. Access into the web user interface of the router in VPN Router. Then, open **Route Policy** and click **Advance Mode**.

## Route Policy

- To route the packets coming from the Firewall Router back to the remote router, access into the web user interface of the Firewall Router. Then, set “192.168.1.1/24” as the gateway IP address and set “172.16.3.0/24” as the destination IP address.

#### Example 2:

Below shows a scenario that local users behind Vigor router A want to access into a remote service (e.g., YouTube) which is blocked or restricted by local Service Provider in area with restrictions. A policy route can be created by the side of Router A to break through the Internet censorship circumvention.

A VPN tunnel has been established between Router A and router B.

- Access into the web user interface of Router A.
- Open **Route Policy**.
- Click any index number (e.g., #1 in this case).
- In the following web page, check **Enable**; type “192.168.1.10” as **Src IP Range**; type “213.57.89.100” as the **Destination IP** for the remote VPN server; and choose VPN as the **Interface** setting.

## 4.4 NAT

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

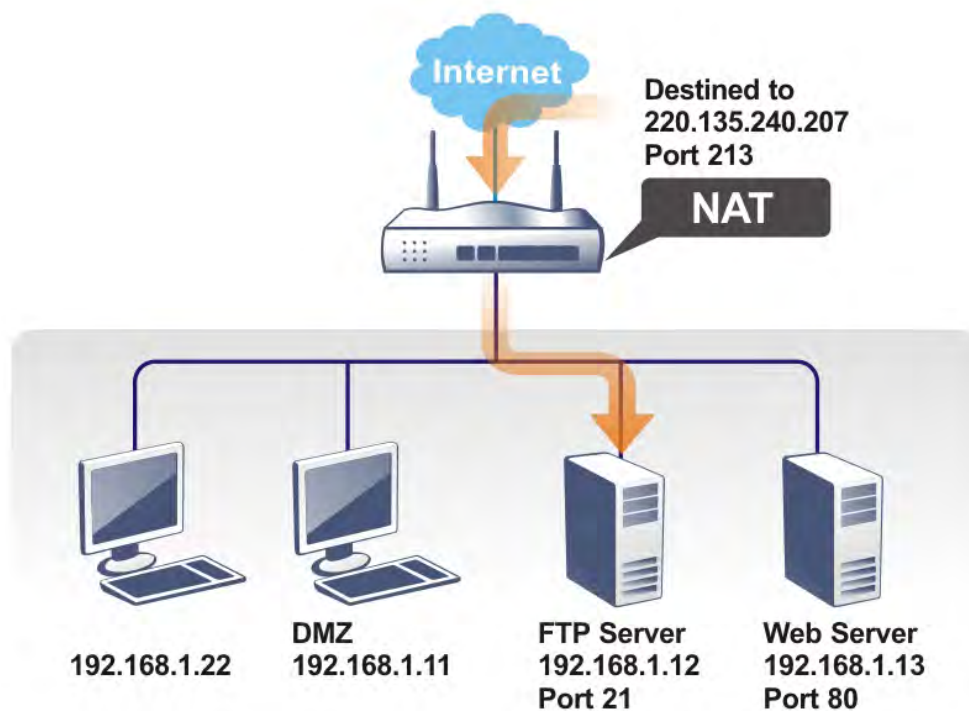

**Note:** On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Below shows the menu items for NAT.

LAN  
 NAT  
 Port Redirection  
 DMZ Host  
 Open Ports  
 Port Triggering  
 Hardware Acceleration

#### 4.4.1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with public IP address from external users to the mapping private IP address/port of the server.

The port redirection can only apply to incoming traffic.

To use this function, please go to **NAT** page and choose **Port Redirection** web page. The **Port Redirection Table** provides 20 port-mapping entries for the internal hosts.

**Note:** The port number values set in this page might be invalid due to the same values configured for Management Port Setup in [System Maintenance>>Management](#).

Each item is explained as follows:

Item	Description
<b>Index</b>	Display the number of the profile.
<b>Service Name</b>	Display the description of the specific network service.
<b>WAN Interface</b>	Display the WAN IP address used by the profile.
<b>Protocol</b>	Display the transport layer protocol (TCP or UDP).
<b>Public Port</b>	Display the port number which will be redirected to the specified <b>Private IP and Port</b> of the internal host.
<b>Private IP</b>	Display the IP address of the internal host providing the service.
<b>Status</b>	Display if the profile is enabled (v) or not (x).

Press any number under Index to access into next page for configuring port redirection.

## NAT >> Port Redirection

### Index No. 1

☐ Enable

Mode

Range

Service Name

Single

Range

---

Protocol

---

WAN IP

1.All

Public Port

0

-

Private IP

-

Private Port

0

**Note:** In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable such port redirection setting.
<b>Mode</b>	Two options (Single and Range) are provided here for you to choose. To set a range for the specific service, select <b>Range</b> . In Range mode, if the public port (start port and end port) and the starting IP of private IP had been entered, the system will calculate and display the ending IP of private IP automatically.
<b>Service Name</b>	Enter the description of the specific network service.
<b>Protocol</b>	Select the transport layer protocol (TCP or UDP).
<b>WAN IP</b>	Select the WAN IP used for port redirection. There are eight WAN IP alias that can be selected and used for port redirection. The default setting is <b>All</b> which means all the incoming data from any port will be redirected to specified range of IP address and port.
<b>Public Port</b>	Specify which port can be redirected to the specified <b>Private IP and Port</b> of the internal host. If you choose <b>Range</b> as the port redirection mode, you will see two boxes on this field. Simply type the required number on the first box. The second one will be assigned automatically later.
<b>Private IP</b>	Specify the private IP address of the internal host providing the service. If you choose <b>Range</b> as the port redirection mode, you will see two boxes on this field. Type a complete IP address in the first box (as the starting point) and the fourth digits in the second box (as the end point).
<b>Private Port</b>	Specify the private port number of the service offered by the internal host.

After finishing all the settings here, please click **OK** to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

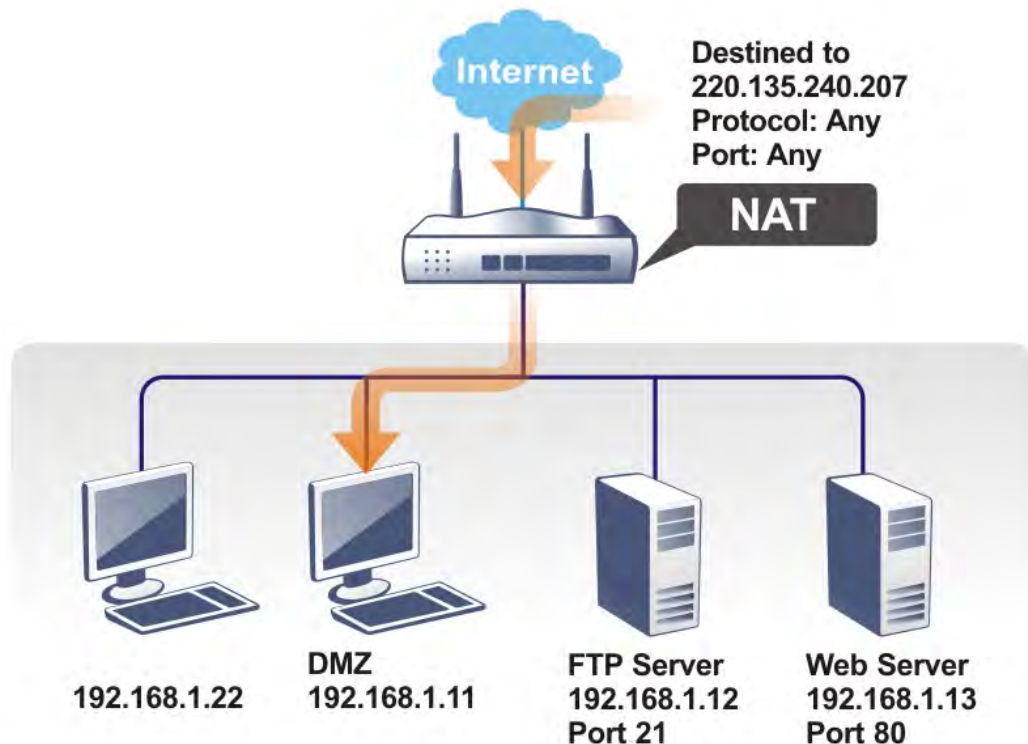

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8925. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

#### 4.4.2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click **DMZ Host** to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

#### NAT >> DMZ Host Setup

#### 4.4.4 Port Triggering

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

## 4.5 Hardware Acceleration

Hardware Acceleration is also called **PPA** in DrayTek for it is based on **Protocol Processing Engine (PPE)** of Infinion. It can only support 128 sessions for network traffic (IN & OUT) with implementing three kinds of modes - Disable, Auto and Manual.

### 4.5.1 Setup

When the data traffic is heavy and data transmission is getting slowly and slowly, you can configure this page to accelerate the data streaming by hardware itself. Open **Hardware Acceleration>>Setup** to access into the following page:

Hardware Acceleration >> Setup

---

Mode:  

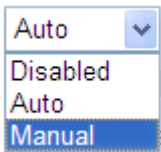

Protocol: ☒ TCP ☐ UDP

Option: ☒ Accelerate most heavy traffic sessions  
☐ Apply the Class Rule in Quality of Service  
☐ Specific Hosts:

2.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
3.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
4.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>
5.	<input type="checkbox"/>	<input type="text" value="0"/>	<input type="text" value="0"/>	<input type="text"/>	<input type="button" value="Choose PC"/>

Note: Bandwidth Management will not work if Hardware Acceleration was enabled.

Available settings are explained as follows:

Item	Description
Mode	<p><b>Auto Mode</b> - When the hardware acceleration is configured with the <b>Auto</b> mode, the sessions with the most heavy loading sessions and the lower latency traffic will be added into PPA. However, the Auto mode does not support UDP protocol by designed.</p> <p><b>Manual Mode</b> - The Manual mode implements three sub-items-- <i>Accelerate most heavy traffic sessions</i>, <i>Apply the Class Rule in Quality of Service</i>, and <i>Specific Hosts</i>. Each of these sub-items can support TCP and UDP protocol.</p> 
Protocol	There are two types supported by this function, TCP and UDP.
Option	<b>Accelerate most heavy traffic sessions</b> – Such option is

available in Auto Mode, too. But the UDP protocol is only supported in this sub-item.

**Apply the Class Rule in Quality of Service** – Users can apply the information provided by QoS in this sub-item.

**Note:** Please visit our website for referring the detailed configuration of QoS.

Bandwidth Management >> Quality of Service

Rule Edit

<input checked="" type="checkbox"/> ACT	<input checked="" type="checkbox"/> Hardware Acceleration
Ethernet Type	<input checked="" type="radio"/> IPv4 <input type="radio"/> IPv6
Local Address	Any
Remote Address	Any

**Specific Hosts** – This sub-item provides 5 hosts for adding NAT sessions into the PPA. For the PPA only support s128 sessions, these hosts will share these sessions. Therefore, the performance will be lower than only one host.

Choose this option to specify certain PCs on LAN to apply the hardware acceleration.

- **Enable** – Check the box to make PC(s) specified in the selected index entry to be applied.
- **Start port** – Type the starting port for the PC(s) in LAN.
- **End port** – Type the ending port for the PC(s) in LAN.
- **Private IP/Choose PC** – Type the IP address as the selected host. Or click the Choose PC button to specify one IP address from the pop-up window.

## Checking the PPA status

For checking whether the rule of PPA is working or not, a user can login to Vigor2132 Series by using telnet. User can view how many sessions is transferring in each direction of PPA table after entering “**ppa -v**”.

```
> ppa -v
% PPA mode is Auto
% PPA mode is Manual <traffic>
% PPA time is 10
% PPA range is 255
*****
WAN Acceleration session
Session - Src_ip:Src_port ----- Dest_ip:Dest_port --- Nat_ip:Nat_port
*****
*****

## 4.6 Firewall

### 4.6.1 Basics for Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet. Furthermore, it can filter out specific packets that trigger the router to build an unwanted outgoing connection.

#### Firewall Facilities

The users on the LAN are provided with secured protection by the following firewall facilities:

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

#### IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: **Call Filter** and **Data Filter**.

- **Call Filter** - When there is no existing Internet connection, **Call Filter** is applied to all traffic, all of which should be outgoing. It will check packets according to the filter rules. If legal, the packet will pass. Then the router shall “**initiate a call**” to build the Internet connection and send the packet to Internet.
- **Data Filter** - When there is an existing Internet connection, **Data Filter** is applied to incoming and outgoing traffic. It will check packets according to the filter rules. If legal, the packet will pass the router.

The following illustrations are flow charts explaining how router will treat incoming traffic and outgoing traffic respectively.

## Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not just examine the header information also monitor the state of the connection.

## Denial of Service (DoS) Defense

The **DoS Defense** functionality helps you to detect and mitigate the DoS attack. The attacks are usually categorized into two types, the flooding-type attacks and the vulnerability attacks. The flooding-type attacks will attempt to exhaust all your system's resource while the vulnerability attacks will try to paralyze the system by offending the vulnerabilities of the protocol or operation system.

The **DoS Defense** function enables the Vigor router to inspect every incoming packet based on the attack signature database. Any malicious packet that might duplicate itself to paralyze the host in the secure LAN will be strictly blocked and a Syslog message will be sent as warning, if you set up Syslog server.

Also the Vigor router monitors the traffic. Any abnormal traffic flow violating the pre-defined parameter, such as the number of thresholds, is identified as an attack and the Vigor router will activate its defense mechanism to mitigate in a real-time manner.

The below shows the attack types that DoS/DDoS defense function can detect:

- |                      |                          |
|----------------------|--------------------------|
| 1. SYN flood attack  | 9. SYN fragment          |
| 2. UDP flood attack  | 10. Fraggle attack       |
| 3. ICMP flood attack | 11. TCP flag scan        |
| 4. Port Scan attack  | 12. Tear drop attack     |
| 5. IP options        | 13. Ping of Death attack |
| 6. Land attack       | 14. ICMP fragment        |
| 7. Smurf attack      | 15. Unknown protocol     |
| 8. Trace route       |                          |

Below shows the menu items for Firewall.

## 4.6.2 General Setup

General Setup allows you to adjust settings of IP Filter and common options. Here you can enable or disable the **Call Filter** or **Data Filter**. Under some circumstance, your filter set can be linked to work in a serial manner. So here you assign the **Start Filter Set** only. Also you can configure the **Log Flag** settings, **Apply IP filter to VPN incoming packets**, and **Accept incoming fragmented UDP packets**.

Click **Firewall** and click **General Setup** to open the general setup page.

### General Setup Page

Such page allows you to enable / disable Call Filter and Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

**General Setup**

General Setup

Default Rule

**Call Filter**  
☒ Enable  
☐ Disable

Start Filter Set Set#1

**Data Filter**  
☒ Enable  
☐ Disable

Start Filter Set Set#2

☒ Accept large incoming fragmented UDP or ICMP packets ( for some games, ex. CS )  
☐ Enable Strict Security Firewall  
Block routing packet from WAN  
☐ IPv4 ☐ IPv6

**Note:** The packets will be filtered by the following firewall functions sequentially:  
1. Data Filter Sets and Rules  
2. Block routing packets from WAN  
3. Default Rule

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Call Filter</b>	Check <b>Enable</b> to activate the Call Filter function. Assign a start filter set for the Call Filter.
<b>Data Filter</b>	Check <b>Enable</b> to activate the Data Filter function. Assign a start filter set for the Data Filter.
<b>Accept large incoming...</b>	Some on-line games (for example: Half Life) will use lots of fragmented UDP packets to transfer game data. Instinctively as a secure firewall, Vigor router will reject these fragmented packets to prevent attack unless you enable “ <b>Accept large incoming fragmented UDP or ICMP Packets</b> ”. By checking this box, you can play these kinds of on-line games. If security concern is in higher priority, you cannot enable “ <b>Accept large incoming</b>

	<b>fragmented UDP or ICMP Packets”.</b>
<b>Enable Strict Security Firewall</b>	<p>For the sake of security, the router will execute strict security checking for data transmission.</p> <p>Such feature is enabled in default. All the packets, while transmitting through Vigor router, will be filtered by firewall. If the firewall system (e.g., content filter server) does not make any response (pass or block) for these packets, then the router’s firewall will block the packets directly.</p>
<b>Block routing packet from WAN</b>	<p>Usually, IPv6 network sessions/traffic from WAN to LAN will be accepted by IPv6 firewall in default.</p> <p><b>IPv6</b> - To prevent remote client accessing into the PCs on LAN, check the box to make the packets (routed from WAN to LAN) via IPv6 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT.</p> <p><b>IPv4</b> - To prevent remote client accessing into the PCs on LAN, check the box to make the incoming packets via IPv4 being blocked by such router. It is effective only for the packets routed but not for packets translated by NAT.</p>

## Default Rule Page

Such page allows you to choose filtering profiles including QoS, User Management, APP Enforcement, URL Content Filter, Web Content Filter and DNS Filter for data transmission via Vigor router.

Firewall >> General Setup

General Setup

General Setup    **Default Rule**

**Actions for default rule:**

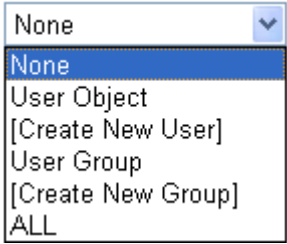

Application	Action/Profile	Syslog
<b>Filter</b>	Pass ▾	<input type="checkbox"/>
<b>Sessions Control</b>	0 / 32000	<input type="checkbox"/>
<b>Quality of Service</b>	None ▾	<input type="checkbox"/>
<b>User Management</b>	None ▾	<input type="checkbox"/>
<b>APP Enforcement</b>	None ▾	<input type="checkbox"/>
<b>URL Content Filter</b>	None ▾	<input type="checkbox"/>
<b>Web Content Filter</b>	None ▾	<input type="checkbox"/>
<b>DNS Filter</b>	None ▾	<input type="checkbox"/>

Advance Setting

Available settings are explained as follows:

Item	Description
<b>Filter</b>	<p>Select <b>Pass</b> or <b>Block</b> for the packets that do not match with the filter rules.</p> <p>Filter</p> <div> <div>Pass ▾</div> <div>Pass</div> <div>Block</div> </div>
<b>Sessions Control</b>	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
<b>Quality of Service</b>	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p> <div> <div>None ▾</div> <div>None</div> <div>Class 1</div> <div>Class 2</div> <div>Class 3</div> <div>Other</div> </div>
<b>User Management</b>	<p>Such item is available only when <b>Rule-Based</b> is selected in</p>

	<p><b>User Management&gt;&gt;General Setup.</b> The general firewall rule will be applied to the user/user group/all users specified here.</p>  <p><b>Note:</b> When there is no user profile or group profile existed, <b>Create New User</b> or <b>Create New Group</b> item will appear for you to click to create a new one.</p>
<b>APP Enforcement</b>	<p>Select an <b>APP Enforcement</b> profile for global IM/P2P application blocking. If there is no profile for you to select, please choose <b>[Create New]</b> from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the <b>APP Enforcement</b> profile selected here. For detailed information, refer to the section of <b>APP Enforcement</b> profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>URL Content Filter</b>	<p>Select one of the <b>URL Content Filter</b> profile settings (created in <b>CSM&gt;&gt; URL Content Filter</b>) for applying with this router. Please set at least one profile for choosing in <b>CSM&gt;&gt; URL Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>URL Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>Web Content Filter</b>	<p>Select one of the <b>Web Content Filter</b> profile settings (created in <b>CSM&gt;&gt; Web Content Filter</b>) for applying with this router. Please set at least one profile in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>Web Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>DNS Filter</b>	<p>Select one of the DNS Filter profile settings (created in <b>CSM&gt;&gt;DNS Filter</b>) for applying with this router. Please set at least one profile in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or click the DNS Filter link in this page to create a new profile.</p>
<b>Advance Setting</b>	<p>Click <b>Edit</b> to open the following window. However, it is <b>strongly recommended</b> to use the default settings here.</p>

#### Firewall >> General Setup

Advance Setting

Codepage	ANSI(1252)-Latin I	
Window size:	65535	
Session timeout:	1440	Minute

OK Close

**Codepage** - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.

If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.

**Window size** – It determines the size of TCP protocol (0~65535). The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

**Session timeout** – Setting timeout for sessions can make the best utilization of network resources.

After finishing all the settings here, please click **OK** to save the configuration.

### 4.6.3 Filter Setup

Click **Firewall** and click **Filter Setup** to open the setup page.

Firewall >> Filter Setup

Filter Setup				<a href="#">Set to Factory Default</a>	
Set	Comments	Set	Comments		
<a href="#">1.</a>	Default Call Filter	<a href="#">7.</a>			
<a href="#">2.</a>	Default Data Filter	<a href="#">8.</a>			
<a href="#">3.</a>		<a href="#">9.</a>			
<a href="#">4.</a>		<a href="#">10.</a>			
<a href="#">5.</a>		<a href="#">11.</a>			
<a href="#">6.</a>		<a href="#">12.</a>			

To edit or add a filter, click on the set number to edit the individual set. The following page will be shown. Each filter set contains up to 7 rules. Click on the rule number button to edit each rule. Check **Active** to enable the rule.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments :

Filter Rule	Active	Comments	Move Up	Move Down
<a href="#">1</a>	<input checked="" type="checkbox"/>	Block NetBios		<a href="#">Down</a>
<a href="#">2</a>	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
<a href="#">3</a>	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
<a href="#">4</a>	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
<a href="#">5</a>	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
<a href="#">6</a>	<input type="checkbox"/>		<a href="#">UP</a>	<a href="#">Down</a>
<a href="#">7</a>	<input type="checkbox"/>		<a href="#">UP</a>	

Next Filter Set

Available settings are explained as follows:

Item	Description
<b>Filter Rule</b>	Click a button numbered (1 ~ 7) to edit the filter rule. Click the button will open Edit Filter Rule web page. For the detailed information, refer to the following page.
<b>Active</b>	Enable or disable the filter rule.
<b>Comment</b>	Enter filter set comments/description. Maximum length is 23-character long.
<b>Move Up/Down</b>	Use <b>Up</b> or <b>Down</b> link to move the order of the filter rules.
<b>Next Filter Set</b>	Set the link to the next filter set to be executed after the current filter run. Do not make a loop with many filter sets.

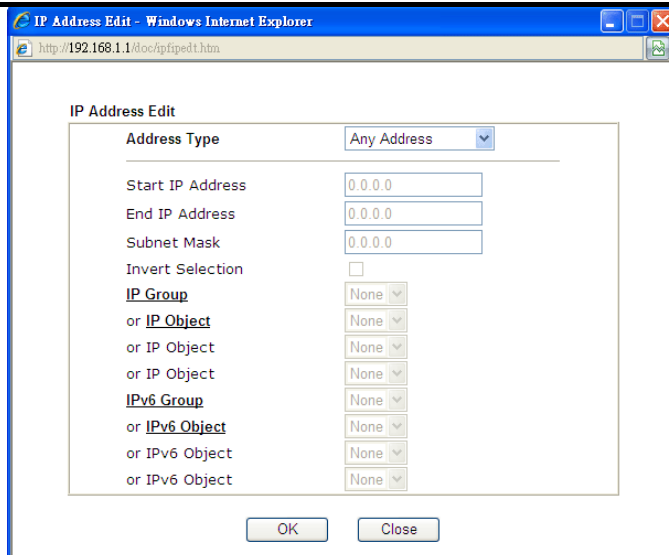

To edit **Filter Rule**, click the **Filter Rule** index button to enter the **Filter Rule** setup page.

## Filter Set 1 Rule 1

<input checked="" type="checkbox"/> Check to enable the Filter Rule		
Comments:	Block NetBios	
Index(1-15) in <b>Schedule</b> Setup:	, , ,	
Clear sessions when schedule ON:	<input type="checkbox"/> Enable	
<hr/>

<u>APP Enforcement</u> :	None	<input type="checkbox"/>
<u>URL Content Filter</u> :	None	<input type="checkbox"/>
<u>Web Content Filter</u> :	None	<input type="checkbox"/>
<u>DNS Filter</u>	None	<input type="checkbox"/>
<hr/>		
Advance Setting	<input type="button" value="Edit"/>	

Available settings are explained as follows:

Item	Description
<b>Check to enable the Filter Rule</b>	Check this box to enable the filter rule.
<b>Comments</b>	Enter filter set comments/description. Maximum length is 14- character long.
<b>Index(1-15)</b>	Set PCs on LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in <b>Applications &gt;&gt; Schedule</b> setup. The default setting of this field is blank and the function will always work.
<b>Clear sessions when schedule ON</b>	Check this box to clear the sessions when the above schedule profiles are applied.
<b>Direction</b>	Set the direction of packet flow. It is for <b>Data Filter</b> only. For the <b>Call Filter</b> , this setting is not available since <b>Call Filter</b> is only applied to outgoing traffic. <b>Note:</b> RT means routing domain for 2nd subnet or other LAN.
<b>Source/Destination IP</b>	Click <b>Edit</b> to access into the following dialog to choose the source/destination IP or IP ranges.

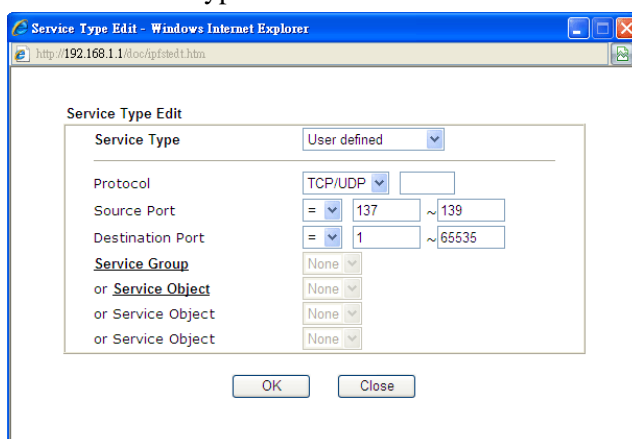

To set the IP address manually, please choose **Any Address/Single Address/Range Address/Subnet Address** as the Address Type and type them in this dialog. In addition, if you want to use the IP range from defined groups or objects, please choose **Group and Objects** as the Address Type.

From the **IP Group** drop down list, choose the one that you want to apply. Or use the **IP Object** drop down list to choose the object that you want.

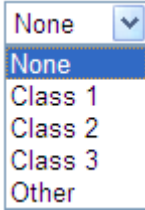

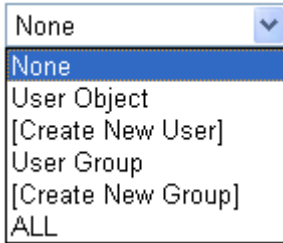

## Service Type

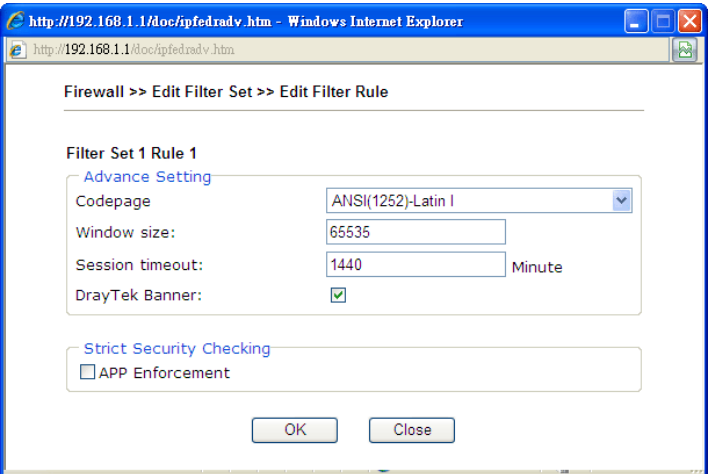

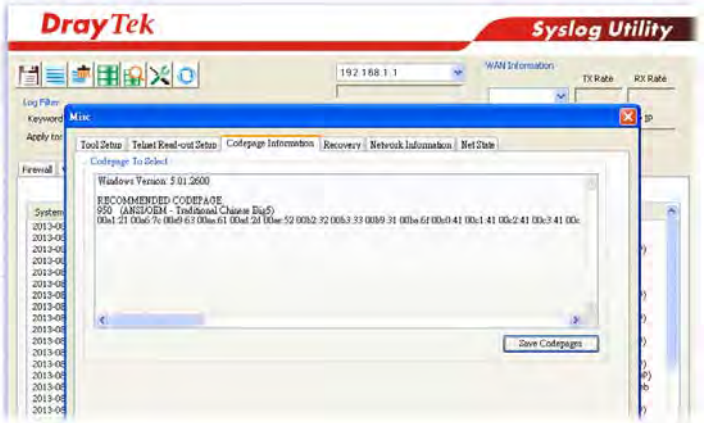

Click **Edit** to access into the following dialog to choose a suitable service type.

To set the service type manually, please choose **User defined** as the Service Type and type them in this dialog. In addition, if you want to use the service type from defined groups or objects, please choose **Group and Objects** as the Service Type.

	<div> <div>User defined</div> <div> <div>User defined</div> <div>Group and Objects</div> </div> </div> <p><b>Protocol</b> - Specify the protocol(s) which this filter rule will apply to.</p> <p><b>Source/Destination Port</b> –</p> <p>(=) – when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type.</p> <p>(!=) – when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type.</p> <p>(&gt;) – the port number greater than this value is available.</p> <p>(&lt;) – the port number less than this value is available for this profile.</p> <p><b>Service Group/Object</b> - Use the drop down list to choose the one that you want.</p>
<b>Fragments</b>	<p>Specify the action for fragmented packets. And it is used for <b>Data Filter</b> only.</p> <p><b>Don't care</b> -No action will be taken towards fragmented packets.</p> <p><b>Unfragmented</b> -Apply the rule to unfragmented packets.</p> <p><b>Fragmented</b> - Apply the rule to fragmented packets.</p> <p><b>Too Short</b> - Apply the rule only to packets that are too short to contain a complete header.</p>
<b>Filter</b>	<p>Specifies the action to be taken when packets match the rule.</p> <p><b>Block Immediately</b> - Packets matching the rule will be dropped immediately.</p> <p><b>Pass Immediately</b> - Packets matching the rule will be passed immediately.</p> <p><b>Block If No Further Match</b> - A packet matching the rule, and that does not match further rules, will be dropped.</p> <p><b>Pass If No Further Match</b> - A packet matching the rule, and that does not match further rules, will be passed through.</p>
<b>Branch to other Filter Set</b>	<p>If the packet matches the filter rule, the next filter rule will branch to the specified filter set. Select next filter rule to branch from the drop-down menu. Be aware that the router will apply the specified filter rule for ever and will not return to previous filter rule any more.</p>
<b>Sessions Control</b>	<p>The number typed here is the total sessions of the packets that do not match the filter rule configured in this page. The default setting is 60000.</p>
<b>MAC Bind IP</b>	<p><b>Strict</b> – Make the MAC address and IP address settings configured in <b>IP Object</b> for <b>Source IP</b> and <b>Destination IP</b></p>

	<p>be bound for applying such filter rule.</p> <p><b>No-Strict</b> - no limitation.</p>
<b>Quality of Service</b>	<p>Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.</p> 
<b>User Management</b>	<p>Such item is available only when <b>Rule-Based</b> is selected in <b>User Management&gt;&gt;General Setup</b>. The general firewall rule will be applied to the user/user group/all users specified here.</p>  <p><b>Note:</b> When there is no user profile or group profile existed, <b>Create New User</b> or <b>Create New Group</b> item will appear for you to click to create a new one.</p>
<b>APP Enforcement</b>	<p>Select an <b>APP Enforcement</b> profile for global IM/P2P application blocking. If there is no profile for you to select, please choose <b>[Create New]</b> from the drop down list in this page to create a new profile. All the hosts in LAN must follow the standard configured in the <b>APP Enforcement</b> profile selected here. For detailed information, refer to the section of <b>APP Enforcement</b> profile setup. For troubleshooting needs, you can specify to record information for IM/P2P by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>URL Content Filter</b>	<p>Select one of the <b>URL Content Filter</b> profile settings (created in <b>CSM&gt;&gt; URL Content Filter</b>) for applying with this router. Please set at least one profile for choosing in <b>CSM&gt;&gt; URL Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create a new profile. For troubleshooting needs, you can specify to record information for <b>URL Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>Web Content Filter</b>	<p>Select one of the <b>Web Content Filter</b> profile settings (created in <b>CSM&gt;&gt; Web Content Filter</b>) for applying with this router. Please set at least one profile for anti-virus in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or choose <b>[Create New]</b> from the drop down list in this page to create</p>

	<p>a new profile. For troubleshooting needs, you can specify to record information for <b>Web Content Filter</b> by checking the Log box. It will be sent to Syslog server. Please refer to section <b>Syslog/Mail Alert</b> for more detailed information.</p>
<b>DNS Filter</b>	<p>Select one of the DNS Filter profile settings (created in CSM&gt;&gt;DNS Filter) for applying with this router. Please set at least one profile in <b>CSM&gt;&gt; Web Content Filter</b> web page first. Or click the DNS Filter link from the drop down list in this page to create a new profile.</p>
<b>Advance Setting</b>	<p>Click <b>Edit</b> to open the following window. However, it is <b>strongly recommended</b> to use the default settings here.</p>  <p><b>Codepage</b> - This function is used to compare the characters among different languages. Choose correct codepage can help the system obtaining correct ASCII after decoding data from URL and enhance the correctness of URL Content Filter. The default value for this setting is ANSI 1252 Latin I. If you do not choose any codepage, no decoding job of URL will be processed. Please use the drop-down list to choose a codepage.</p> <p>If you do not have any idea of choosing suitable codepage, please open Syslog. From Codepage Information of Setup dialog, you will see the recommended codepage listed on the dialog box.</p>  <p><b>Window size</b> – It determines the size of TCP protocol (0~65535). The more the value is, the better the</p>

---

performance will be. However, if the network is not stable, small value will be proper.

**Session timeout**—Setting timeout for sessions can make the best utilization of network resources. However, Queue timeout is configured for TCP protocol only; session timeout is configured for the data flow which matched with the firewall rule.

**DrayTek Banner** – Please uncheck this box and the following screen will not be shown for the unreachable web page. The default setting is Enabled.

**Strict Security Checking** - For the sake of security, you might want the router executing strict security checking for data transmission. The router performance will be affected if you invoke strict security checking.

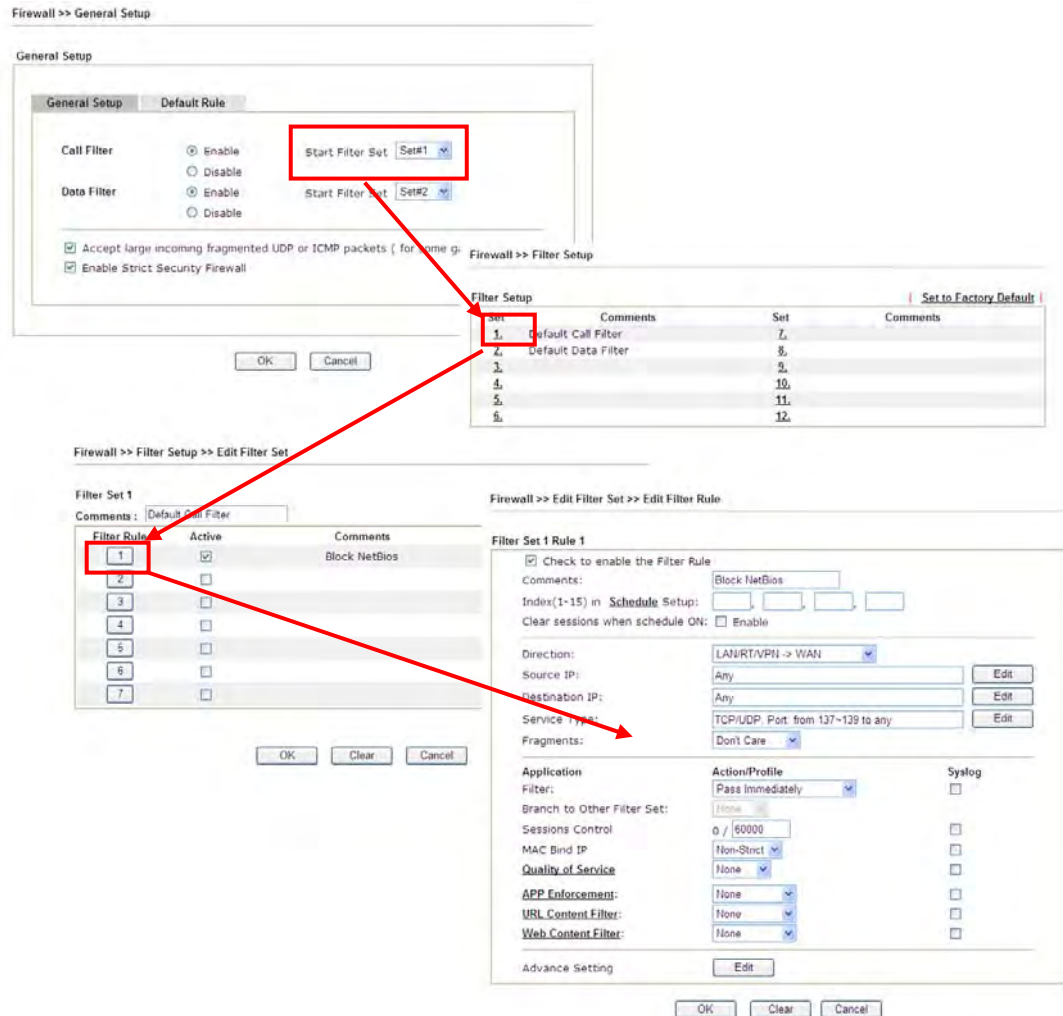

**APP Enforcement** – Check this box to execute the critical checking for all the files transferred via IM/P2P.

---

## Example

As stated before, all the traffic will be separated and arbitrated using one of two IP filters: call filter or data filter. You may preset 12 call filters and data filters in **Filter Setup** and even link them in a serial manner. Each filter set is composed by 7 filter rules, which can be further defined. After that, in **General Setup** you may specify one set for call filter and one set for data filter to execute first.

## 4.6.4 DoS Defense

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the **DoS Defense** setup. The DoS Defense functionality is disabled for default.

Click **Firewall** and click **DoS Defense** to open the setup page.

Firewall >> DoS defense Setup

DoS defense Setup

☒ Enable DoS Defense Select All

Enable DoS defense function to prevent the attacks from hacker or crackers.

OK Clear All Cancel

Available settings are explained as follows:

Item	Description
<b>Enable Dos Defense</b>	Check the box to activate the DoS Defense Functionality.
<b>Select All</b>	Click this button to select all the items listed below.
<b>Enable SYN flood defense</b>	<p>Check the box to activate the SYN flood defense function. Once detecting the Threshold of the TCP SYN packets from the Internet has exceeded the defined value, the Vigor router will start to randomly discard the subsequent TCP SYN packets for a period defined in Timeout. The goal for this is prevent the TCP SYN packets' attempt to exhaust the limited-resource of Vigor router.</p> <p>By default, the threshold and timeout values are set to 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as "attack event" and the session will be paused for 10 seconds.</p>
<b>Enable UDP flood defense</b>	Check the box to activate the UDP flood defense function. Once detecting the Threshold of the UDP packets from the Internet has exceeded the defined value, the Vigor router

	<p>will start to randomly discard the subsequent UDP packets for a period defined in Timeout.</p> <p>The default setting for threshold and timeout are 2000 packets per second and 10 seconds, respectively. That means, when 2000 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
<b>Enable ICMP flood defense</b>	<p>Check the box to activate the ICMP flood defense function. Similar to the UDP flood defense function, once if the Threshold of ICMP packets from Internet has exceeded the defined value, the router will discard the ICMP echo requests coming from the Internet.</p> <p>The default setting for threshold and timeout are 250 packets per second and 10 seconds, respectively. That means, when 250 packets per second received, they will be regarded as “attack event” and the session will be paused for 10 seconds.</p>
<b>Enable PortScan detection</b>	<p>Port Scan attacks the Vigor router by sending lots of packets to many ports in an attempt to find ignorant services would respond. Check the box to activate the Port Scan detection. Whenever detecting this malicious exploration behavior by monitoring the port-scanning Threshold rate, the Vigor router will send out a warning.</p> <p>By default, the Vigor router sets the threshold as 2000 packets per second. That means, when 2000 packets per second received, they will be regarded as “attack event”.</p>
<b>Block IP options</b>	<p>Check the box to activate the Block IP options function. The Vigor router will ignore any IP packets with IP option field in the datagram header. The reason for limitation is IP option appears to be a vulnerability of the security for the LAN because it will carry significant information, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages...etc. An eavesdropper outside might learn the details of your private networks.</p>
<b>Block Land</b>	<p>Check the box to enforce the Vigor router to defense the Land attacks. The Land attack combines the SYN attack technology with IP spoofing. A Land attack occurs when an attacker sends spoofed SYN packets with the identical source and destination addresses, as well as the port number to victims.</p>
<b>Block Smurf</b>	<p>Check the box to activate the Block Smurf function. The Vigor router will ignore any broadcasting ICMP echo request.</p>
<b>Block trace router</b>	<p>Check the box to enforce the Vigor router not to forward any trace route packets.</p>
<b>Block SYN fragment</b>	<p>Check the box to activate the Block SYN fragment function. The Vigor router will drop any packets having SYN flag and more fragment bit set.</p>
<b>Block Fraggle Attack</b>	<p>Check the box to activate the Block fraggle Attack function.</p>

	<p>Any broadcast UDP packets received from the Internet is blocked.</p> <p>Activating the DoS/DDoS defense functionality might block some legal packets. For example, when you activate the fraggle attack defense, all broadcast UDP packets coming from the Internet are blocked. Therefore, the RIP packets from the Internet might be dropped.</p>
<b>Block TCP flag scan</b>	<p>Check the box to activate the Block TCP flag scan function. Any TCP packet with anomaly flag setting is dropped. Those scanning activities include <i>no flag scan</i>, <i>FIN without ACK scan</i>, <i>SYN FINscan</i>, <i>Xmas scan</i> and <i>full Xmas scan</i>.</p>
<b>Block Tear Drop</b>	<p>Check the box to activate the Block Tear Drop function. Many machines may crash when receiving ICMP datagrams (packets) that exceed the maximum length. To avoid this type of attack, the Vigor router is designed to be capable of discarding any fragmented ICMP packets with a length greater than 1024 octets.</p>
<b>Block Ping of Death</b>	<p>Check the box to activate the Block Ping of Death function. This attack involves the perpetrator sending overlapping packets to the target hosts so that those target hosts will hang once they re-construct the packets. The Vigor routers will block any packets realizing this attacking activity.</p>
<b>Block ICMP Fragment</b>	<p>Check the box to activate the Block ICMP fragment function. Any ICMP packets with more fragment bit set are dropped.</p>
<b>Block Unassigned Numbers</b>	<p>Check the box to activate the function. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.</p>
<b>Warning Messages</b>	<p>We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.</p> <p>All the warning messages related to <b>DoS Defense</b> will be sent to user and user can review it through Syslog daemon. Look for the keyword <b>DoS</b> in the message, followed by a name to indicate what kind of attacks is detected.</p>

## SysLog / Mail Alert Setup

<b>SysLog Access Setup</b> <input checked="" type="checkbox"/> Enable Syslog Save to: <input checked="" type="checkbox"/> Syslog Server <input type="checkbox"/> USB Disk <b>Router Name</b> <input type="text"/> Server IP Address <input type="text"/> Destination Port <input type="text" value="514"/> Mail Syslog <input type="checkbox"/> Enable Enable syslog message: <input checked="" type="checkbox"/> Firewall Log <input checked="" type="checkbox"/> User Access Log <input checked="" type="checkbox"/> WAN Log <input checked="" type="checkbox"/> Router/DSL information <b>AlertLog Setup</b> <input type="checkbox"/> Enable AlertLog Port <input type="text" value="514"/>		<b>Mail Alert Setup</b> <input checked="" type="checkbox"/> Enable <input type="button" value="Send a test e-mail"/> SMTP Server <input type="text"/> SMTP Port <input type="text" value="25"/> Mail To <input type="text"/> Return-Path <input type="text"/> <input type="checkbox"/> Authentication User Name <input type="text"/> Password <input type="text"/> Enable E-Mail Alert: <input checked="" type="checkbox"/> DoS Attack <input checked="" type="checkbox"/> IM-P2P <input checked="" type="checkbox"/> VPN LOG
--	--	---

Note: 1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".  
 2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.7 User Management

User Management is a security feature which disallows any IP traffic (except DHCP-related packets) from a particular host until that host has correctly supplied a valid username and password. Instead of managing with IP address/MAC address, User Management function manages hosts with user account. Network administrator can give different firewall policies or rules for different hosts with different User Management accounts. This is more flexible and convenient for network management. Not only offering the basic checking for Internet access, User Management also provides additional firewall rules, e.g. CSM checking for protecting hosts.

**Note:** Filter rules configured under Firewall usually are applied to the host (the one that the router installed) only. With user management, the rules can be applied to every user connected to the router with customized profiles.

User Online Status  
Objects Setting

## 4.7.1 General Setup

General Setup can determine the standard (rule-based or user-based) for the users controlled by User Management. The mode (standard) selected here will influence the contents of the filter rule(s) applied to every user.

User Management >> General Setup

**General Setup**

**Mode Selection:**

☒ **Rule-Based** is a management method based on IP address. Administrator may set different firewall rules to different IP address.

☐ **User-Based** is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

**Authentication page:**

Web Authentication: ☒ HTTPS ☐ HTTP

☐ Display IP address on the dialog box pops up after successful login.

**Landing page:**

(Max 255 characters) [Preview](#) [Set to Factory Default](#)

```
<body stats=1><script language='javascript'>
window.location='http://www.draytek.com'</script></body>
```

Available settings are explained as follows:

Item	Description
<b>Mode</b>	<p>There are two modes offered here for you to choose. Each mode will bring different filtering effect to the users involved.</p> <p><b>User-Based</b> - If you choose such mode, the router will apply the filter rules configured in <b>User Management&gt;&gt;User Profile</b> to the users.</p> <p><b>Rule-Based</b> –If you choose such mode, the router will apply the filter rules configured in <b>Firewall&gt;&gt;General Setup</b> and <b>Filter Rule</b> to the users.</p>
<b>Authentication page</b>	<p><b>Web Authentication</b> - Choose the protocol for web authentication.</p> <p><b>Display IP Address on tracking window</b> – Check the box to display the IP address of the client on the tracking window.</p>
<b>Landing Page</b>	<p>Type the information to be displayed on the first web page when the LAN user accessing into Internet via such router.</p>

After finishing all the settings here, please click **OK** to save the configuration.

## 4.7.2 User Profile

This page allows you to set customized profiles (up to 200) which will be applied for users controlled under **User Management**. Simply open **User Management>>User Profile**.

Available settings are explained as follows:

Item	Description
<b>Enable this account</b>	Check this box to enable such user profile.
<b>Username</b>	Type a name for such user profile (e.g., <i>LAN_User_Group_1</i> , <i>WLAN_User_Group_A</i> , <i>WLAN_User_Group_B</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the User Name specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router. However the accessing operation will be restricted with the conditions configured in this user profile. The maximum length of the name you can set is 24 characters.
<b>Password</b>	Type a password for such profile (e.g., <i>lug123</i> , <i>wug123</i> , <i>wug456</i> , etc). When a user tries to access Internet through this router, an authentication step must be performed first. The user has to type the password specified here to pass the authentication. When the user passes the authentication, he/she can access Internet via this router with the limitation configured in this user profile. The maximum length of the password you can set is 24 characters.
<b>Confirm Password</b>	Type the password again for confirmation.
<b>Idle Timeout</b>	If the user is idle over the limitation of the timer, the <b>network connection will be stopped for such user</b> . By default, the Idle Timeout is set to 10 minutes.
<b>Max User Login</b>	Such profile can be used by many users. You can set the limitation for the number of users accessing Internet with the conditions of such profile. The default setting is 0 which means no limitation in the number of users.
<b>Policy</b>	<p>It is available only when <b>User-Based</b> mode selected in <b>User Management&gt;&gt;General Setup</b>.</p>  <p><b>Default</b> – If you choose such item, the filter rules pre-configured in <b>Firewall</b> can be adopted for such user profile.</p> <p><b>Create New Policy</b> – If you choose such item, the following page will be popped up for you to define another filter rule as a new policy.</p>

	<p>Firewall &gt;&gt; Edit Filter Set &gt;&gt; Edit Filter Rule</p> <p>Filter Set 1 Rule 2</p> <p><input checked="" type="checkbox"/> Check to enable the Filter Rule</p> <p>Comments: <input type="text"/></p> <p>Index(1-15) in <u>Schedule</u> Setup: <input type="text"/>, <input type="text"/>, <input type="text"/>, <input type="text"/></p> <p>Clear sessions when schedule ON: <input type="checkbox"/> Enable</p> <hr/> <p>Direction: <input type="text" value="LAN/RT/VPN -&gt; WAN"/></p> <p>Source IP: <input type="text" value="Any"/></p> <p>Destination IP: <input type="text" value="Any"/></p> <p>Service Type: <input type="text" value="Any"/></p> <p>For the detailed configuration, simply refer to <b>Firewall&gt;&gt;Filter Rule</b>. The firewall filter rules that are not selected in <b>Firewall&gt;&gt;General&gt;&gt;Default rule</b> can be available for use in <b>User Management&gt;&gt;User Profile</b>.</p>
<b>External Service Authentication</b>	<p>The router will authenticate the dial-in user by itself or by external service such as Radius server. If Radius is selected here, it is not necessary to configure the password setting above.</p>
<b>Log</b>	<p>Time of login/log out, block/unblock for the user(s) can be sent to and displayed in Syslog. Please choose any one of the log items to take down relational records for the user(s).</p> 
<b>Pop Browser Tracking Window</b>	<p>If such function is enabled, a pop up window will be displayed on the screen with time remaining for connection if Idle Timeout is set. However, the system will update the time periodically to keep the connection always on. Thus, Idle Timeout will not interrupt the network connection.</p>
<b>Authentication</b>	<p>Any user (from LAN side or WLAN side) tries to connect to Internet via Vigor router must be authenticated by the router first. There are three ways offered by the router for the user to choose for authentication.</p> <p><b>Web</b> – If it is selected, the use can type the URL of the router from any browser. Then, a login window will be popped up and ask the user to type the user name and password for authentication. If succeed, a <b>Welcome Message</b> (configured in <b>User Management &gt;&gt; General Setup</b>) will be displayed. After authentication, the destination URL (if requested by the user) will be guided automatically by the router.</p> <p><b>Alert Tool</b> – If it is selected, the user can open Alert Tool and type the user name and password for authentication. A window with remaining time of connection for such user will be displayed. Next, the user can access Internet through any browser on Windows. Note that Alert Tool can be downloaded from DrayTek web site.</p> <p><b>Telnet</b> – If it is selected, the user can use Telnet command to</p>

	perform the authentication job.
<b>Landing Page</b>	<p>When a user tries to access into the web user interface of Vigor router series with the user name and password specified in this profile, he/she will be lead into the web page configured in Landing Page field in <b>User Management&gt;&gt;General Setup</b>.</p> <p>Check this box to enable such function.</p>
<b>Index (1-15) in Schedule Setup</b>	<p>You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>
<b>Enable Time Quota</b>	<p>Time quota means the total connection time allowed by the router for the user with such profile. Check the box to enable the function of time quota. The first box displays the remaining time of the network connection. The second box allows to type the number of time (unit is minute) which is available for the user (using such profile) to access Internet.</p> <p> – Click this box to set and increase the time quota for such profile.</p> <p> – Click this box to decrease the time quota for such profile.</p> <div style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p><b>Note:</b> A dialog will be popped up to notify how many time remained when a user accesses into Internet through Vigor router successfully.</p>  <p>When the time is up, all the connection jobs including network, IM, social media, facebook, and etc. will be terminated.</p> </div>
<b>Enable Data Quota</b>	<p>Data Quota means the total amount for data transmission allowed for the user. The unit is MB.</p> <p> – Click this box to set and increase the data quota for such profile.</p> <p> – Click this box to decrease the data quota for such profile.</p>
<b>Reset quota to default when scheduling time expired</b>	<p>Set default time quota and data quota for such profile. When the scheduling time is up, the router will use the default quota settings automatically.</p>

	<p><b>Enable</b> – Check it to use the default setting for time quota and data quota.</p> <p><b>Default Time Quota</b> – Type the value for the time manually.</p> <p><b>Default Data Quota</b> – Type the value for the data manually.</p>
--	---

After finishing all the settings here, please click **OK** to save the configuration.

### 4.7.3 User Group

This page allows you to bind several user profiles into one group. These groups will be used in **Firewall>>General Setup** as part of filter rules.

User Management >> User Group

User Group Table: [Set to Factory Default](#)

Index	Name	Index	Name

Total Number : 1

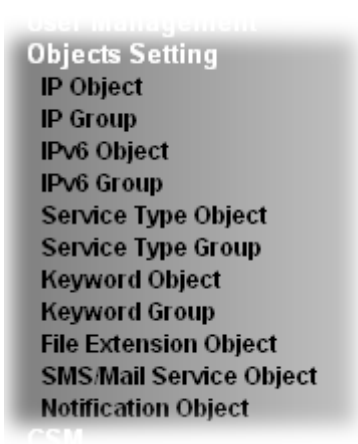

Available settings are explained as follows:

Item	Description
<b>Refresh Seconds</b>	Use the drop down list to choose the time interval of the page refresh.  Refresh Seconds: 
<b>Refresh</b>	Click this link to refresh this page manually.
<b>Index</b>	Display the number of the user online.
<b>User</b>	Display the users which connect to Vigor router currently. You can click the link under the username to open the user profile setting page for that user.
<b>IP Address</b>	Display the IP address of the device.
<b>Profile</b>	Display the authority of the account.

<b>Last Login Time</b>	Display the login time that such user connects to the router last time.
<b>Expired Time</b>	Display the expired time of the network connection for the user.
<b>Data Quota</b>	Display the quota for data transmission.
<b>Idle Time</b>	Display the idle timeout setting for such profile.
<b>Action</b>	<b>Block</b> - can prevent specified user accessing into Internet. <b>Unblock</b> – the user will be unblocked. <b>Logout</b> – the user will be logged out forcefully.

## 4.8 Objects Settings

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

## 4.8.1 IP Object

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with **objects** and bind them with **groups** for using conveniently. Later, we can select that object/group that can apply it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address). You can set up to 192 sets of IP Objects with different conditions.

Objects Setting >> IP Object

<b>Set to Factory Default</b>	Clear all profiles.
<b>Index</b>	Display the profile number that you can configure.
<b>Name</b>	Display the name of the object profile.

To set a new profile, please do the steps listed below:

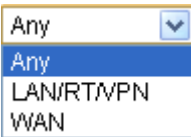

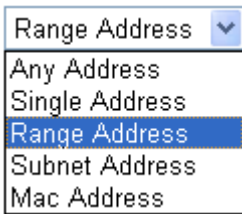

1. Click the number (e.g., #1) under Index column for configuration in details.
2. The configuration page will be shown as follows:

Profile Index : 1

Name:	RD Department
Interface:	Any
Address Type:	Range Address
Mac Address:	00:00:00:00:00:00
Start IP Address:	192.168.1.59
End IP Address:	192.168.1.65
Subnet Mask:	0.0.0.0
Invert Selection:	<input type="checkbox"/>

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Name</b>	Type a name for this profile. Maximum 15 characters are allowed.
<b>Interface</b>	<p>Choose a proper interface.</p>  <p>For example, the <b>Direction</b> setting in <b>Edit Filter Rule</b> will ask you specify IP or IP range for WAN or LAN/RT/VPN or any IP address. If you choose LAN/RT/VPN as the <b>Interface</b> here, and choose LAN/RT/VPN as the direction setting in <b>Edit Filter Rule</b>, then all the IP addresses specified with LAN/RT/VPN interface will be opened for you to choose in <b>Edit Filter Rule</b> page.</p>
<b>Address Type</b>	<p>Determine the address type for the IP address.</p> <p>Select <b>Single Address</b> if this object contains one IP address only.</p> <p>Select <b>Range Address</b> if this object contains several IPs within a range.</p> <p>Select <b>Subnet Address</b> if this object contains one subnet for IP address.</p> <p>Select <b>Any Address</b> if this object contains any IP address.</p> <p>Select <b>Mac Address</b> if this object contains Mac address.</p> 
<b>MAC Address</b>	Type the MAC address of the network card which will be controlled.
<b>Start IP Address</b>	Type the start IP address for Single Address type.

<b>End IP Address</b>	Type the end IP address if the Range Address type is selected.
<b>Subnet Mask</b>	Type the subnet mask if the Subnet Address type is selected.
<b>Invert Selection</b>	If it is checked, all the IP addresses except the ones listed above will be applied later while it is chosen.

- After finishing all the settings here, please click **OK** to save the configuration. Below is an example of IP objects settings.

Objects Setting >> IP Object

IP Object Profiles:

Index	Name	Index
<u>1.</u>	RD Department	<u>17.</u>

<b>Compression</b>	

Available settings are explained as follows:

Item	Description
Profile Name	Type a name for this profile. The maximum length of the name you can set is 7 characters.

3. Type a name for such profile and check all the items of file extension that will be processed in the router. Finally, click **OK** to save this profile.

## 4.8.10 SMS/Mail Service Object

### SMS Service Object

This page allows you to set ten profiles which will be applied in **Application>>SMS/Mail Alert Service**.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
<u>1.</u>		kotsms.com.tw (TW)	
<u>2.</u>		kotsms.com.tw (TW)	
<u>3.</u>		kotsms.com.tw (TW)	
<u>4.</u>		kotsms.com.tw (TW)	
<u>5.</u>		kotsms.com.tw (TW)	
<u>6.</u>		kotsms.com.tw (TW)	
<u>7.</u>		kotsms.com.tw (TW)	
<u>8.</u>		kotsms.com.tw (TW)	
<u>9.</u>	Custom 1		
<u>10.</u>	Custom 2		

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Index	Display the profile number that you can configure.
Profile	Display the name for such SMS profile.
SMS Provider	Display the service provider which offers SMS service.

To set a new profile, please do the steps listed below:

1. Click the **SMS Provider** tab, and click the number (e.g., #1) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server
Index	Profile Name	
<u>1.</u>		
<u>2.</u>		
<u>3.</u>		
<u>4.</u>		

2. The configuration page will be shown as follows:

Object Settings >> SMS / Mail Service Object

Profile Index: 1

Profile Name	Line_down
Service Provider	kotsms.com.tw (TW) ▼
Username	line1
Password	***
Quota	10
Sending Interval	3 (seconds)

**Note:** 1. Only one message can be sent during the "Sending Interval" time.  
2. If the "Sending Interval" was set to 0, there will be no limitation.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for such SMS profile. The maximum length of the name you can set is 31 characters.
<b>Service Provider</b>	Use the drop down list to specify the service provider which offers SMS service.
<b>Username</b>	Type a user name that the sender can use to register to selected SMS provider. The maximum length of the name you can set is 31 characters.
<b>Password</b>	Type a password that the sender can use to register to selected SMS provider. The maximum length of the password you can set is 31 characters.
<b>Quota</b>	Type the number of the credit that you purchase from the service provider chosen above. Note that one credit equals to one SMS text message on the standard route.
<b>Sending Interval</b>	To avoid quota being exhausted soon, type time interval for sending the SMS.

3. After finishing all the settings here, please click **OK** to save the configuration.

Object Settings >> SMS / Mail Service Object

SMS Provider		Mail Server	<a href="#">Set to Factory Default</a>
Index	Profile Name	SMS Provider	
<u>1.</u>	Line_down	kotsms.com.tw (TW)	
<u>2.</u>		kotsms.com.tw (TW)	
<u>3.</u>		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	

## Customized SMS Service

Vigor router offers several SMS service provider to offer the SMS service. However, if your service provider cannot be found from the service provider list, simply use Index 9 and Index 10 to make customized SMS service. The profile name for Index 9 and Index 10 are fixed.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server	Set to Factory Default	
Index	Profile Name	SMS Provider	
1.		kotsms.com.tw (TW)	
2.		kotsms.com.tw (TW)	
3.		kotsms.com.tw (TW)	
4.		kotsms.com.tw (TW)	
5.		kotsms.com.tw (TW)	
6.		kotsms.com.tw (TW)	
7.		kotsms.com.tw (TW)	
8.		kotsms.com.tw (TW)	
9.	Custom 1		
10.	Custom 2		

You can click the number (e.g., #9) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

### Profile Index: 10

Profile Name	Custom 2
Service Provider	
<div></div>	
Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0? username=###txtUser### &password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg###

<b>Profile</b>	Display the name for such mail server profile.

To set a new profile, please do the steps listed below:

1. Click the **Mail Server** tab, and click the number (e.g., #1) under Index column for configuration in details.

Object Settings >> SMS / Mail Service Object

The screenshot shows a web interface with two tabs: 'SMS Provider' and 'Mail Server'. The 'Mail Server' tab is selected. Below the tabs is a table with an 'Index' column. The first row of the table is highlighted, showing the number '1.' in the Index column.

2. The configuration page will be shown as follows:

Object Settings >> SMS / Mail Service Object

The screenshot shows the configuration page for 'Profile Index: 1'. It contains several input fields and checkboxes. The 'Profile Name' field is set to 'Mail\_Notify'. The 'SMTP Server' field is set to '192.168.1.98'. The 'SMTP Port' field is set to '465'. The 'Sender Address' field is set to 'carrieni@draytek.com'. There are two checked checkboxes: 'Use SSL' and 'Authentication'. The 'Username' field is set to 'john'. The 'Password' field is masked with four dots. The 'Sending Interval' field is set to '0' with the unit '(seconds)' next to it. At the bottom of the form are three buttons: 'OK', 'Clear', and 'Cancel'.

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for such mail service profile. The maximum length of the name you can set is 31 characters.
<b>SMTP Server</b>	Type the IP address of the mail server. The maximum length of the name you can set is 63 characters.
<b>SMTP Port</b>	Type the port number for SMTP server.
<b>Sender Address</b>	Type the e-mail address of the sender.
<b>Use SSL</b>	Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.
<b>Authentication</b>	<p>The mail server must be authenticated with the correct username and password to have the right of sending message out. Check the box to enable the function.</p> <p><b>Username</b> – Type a name for authentication. The maximum length of the name you can set is 31 characters.</p> <p><b>Password</b> – Type a password for authentication. The</p>

	maximum length of the password you can set is 31 characters.
<b>Sending Interval</b>	Define the interval for the system to send the SMS out.

3. After finishing all the settings here, please click **OK** to save the configuration.

## 4.9 CSM Profile

### Content Security Management (CSM)

CSM is an abbreviation of **Content Security Management** which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

### APP Enforcement Filter

As the popularity of all kinds of instant messenger application arises, communication cannot become much easier. Nevertheless, while some industry may leverage this as a great tool to connect with their customers, some industry may take reserve attitude in order to reduce employee misuse during office hour or prevent unknown security leak. It is similar situation for corporation towards peer-to-peer applications since file-sharing can be convenient but insecure at the same time. To address these needs, we provide CSM functionality.

### URL Content Filter

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

### Web Content Filter

We all know that the content on the Internet just like other types of media may be inappropriate sometimes. As a responsible parent or employer, you should protect those in your trust against the hazards. With Web filtering service of the Vigor router, you can protect your business from common primary threats, such as productivity, legal liability, network and security threats. For parents, you can protect your children from viewing adult websites or chat rooms.

Once you have activated your Web Filtering service in Vigor router and chosen the categories of website you wish to restrict, each URL address requested (e.g. www.bbc.co.uk) will be checked against our server database. This database is updated as frequent as daily by a global team of Internet researchers. The server will look up the URL and return a category to your router. Your Vigor router will then decide whether to allow access to this site according to the categories you have selected. Please note that this action will not introduce any delay in your Web surfing because each of multiple load balanced database servers can handle millions of requests for categorization.

<b>Note:</b> The priority of URL Content Filter is higher than Web Content Filter.
--

## 4.9.1 APP Enforcement Profile

You can define policy profiles for IM (Instant Messenger)/P2P (Peer to Peer)/Protocol/Misc application. This page allows you to set 32 profiles for different requirements. The APP Enforcement Profile will be applied in **Default Rule of Firewall>>General Setup** for filtering.

## 4.9.2 APPE Signature Upgrade

The APPE Enforcement Profile adopted by Vigor router will be treated as the APPE signature. DrayTek will periodically upgrade versions for all of the APPs supported by Vigor router. However, it might be inconvenient for users to upgrade the APP version one by one. This feature is specially designed to offer a quick method to execute APP version upgrade. Users can perform the APPE signature upgrade manually or configure the settings on this page to make Vigor router performing the APPE signature automatically.

### CSM >> APPE Signature Upgrade

Available settings are explained as follows

Item	Description
Upgrade Setting	<p><b>APPE Module Version</b> – Display current version status of APPE signature.</p> <p><b>New version from the Internet</b> – <b>Download</b> button is available only when Vigor router detects new APPE version. After clicking it, a dialog will appear with information added to such new version. Click <b>OK</b> to exit the dialog and start the signature upgrade.</p> <p><b>Upgrade via interface</b> – Choose one of the WAN interfaces as a channel for APPE signature upgrade.</p>
Setup Download Server	<p>Specify the download server by typing the URL of the server located. Or you can click <a href="#">Find more</a> link to search the one you want.</p> <p><b>Signature authentication/download message</b> – Display the status of APPE Signature Upgrade.</p>
Upgrade Manually	<p><b>Import</b> – Click this button to open the following page. Press Choose File to locate the signature file which downloaded from MyVigor portal or FTP server previously. Then, click</p>

	<p><b>Upgrade</b> and wait for the system completing the process.</p> 
<b>Upgrade Automatically</b>	<p><b>Scheduled Update</b> - Check the box to make Vigor router upgrading the APPE signature based on the schedule configured here.</p>

### 4.9.3 URL Content Filter Profile

To provide an appropriate cyberspace to users, Vigor router equips with **URL Content Filter** not only to limit illegal traffic from/to the inappropriate web sites but also prohibit other web feature where malicious code may conceal.

Once a user type in or click on an URL with objectionable keywords, URL keyword blocking facility will decline the HTTP request to that web page thus can limit user's access to the website. You may imagine **URL Content Filter** as a well-trained convenience-store clerk who won't sell adult magazines to teenagers. At office, **URL Content Filter** can also provide a job-related only environment hence to increase the employee work efficiency. How can URL Content Filter work better than traditional firewall in the field of filtering? Because it checks the URL strings or some of HTTP data hiding in the payload of TCP packets while legacy firewall inspects packets based on the fields of TCP/IP headers only.

On the other hand, Vigor router can prevent user from accidentally downloading malicious codes from web pages. It's very common that malicious codes conceal in the executable objects, such as ActiveX, Java Applet, compressed files, and other executable files. Once downloading these types of files from websites, you may risk bringing threat to your system. For example, an ActiveX control object is usually used for providing interactive web feature. If malicious code hides inside, it may occupy user's system.

For example, if you add key words such as "sex", Vigor router will limit web access to web sites or web pages such as "www.sex.com", "www.backdoor.net/images/sex/p\_386.html". Or you may simply specify the full or partial URL such as "www.sex.com" or "sex.com".

Also the Vigor router will discard any request that tries to retrieve the malicious code.

Click **CSM** and click **URL Content Filter Profile** to open the profile setting page.

**CSM >> URL Content Filter Profile**

**URL Content Filter Profile Table:**

**| Set to Factory Default |**

Profile	Name	Profile	Name

Each item is explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles.
<b>Profile</b>	Display the number of the profile which allows you to click to set different policy.
<b>Name</b>	Display the name of the URL Content Filter Profile.

<b>Administration Message</b>	<p>You can type the message manually for your necessity.</p> <p><b>Default Message</b> - You can type the message manually for your necessity or click this button to get the default message which will be displayed on the field of <b>Administration Message</b>.</p>
-------------------------------	--

You can set eight profiles as URL content filter. Simply click the index number under Profile to open the following web page.

CSM >> URL Content Filter Profile

Profile Index: 1

Profile Name:

Priority:  Log:

**1.URL Access Control**

☐ Enable URL Access Control ☐ Prevent web access from IP address

Action:  Group/Object Selections:

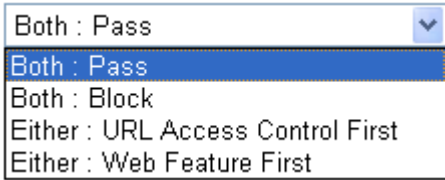

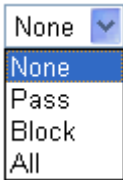

**2.Web Feature**

☐ Enable Restrict Web Feature

Action:  ☐ Cookie ☐ Proxy ☐ Upload File Extension Profile:

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type a name for the CSM profile. The maximum length of the name you can set is 15 characters.
<b>Priority</b>	<p>It determines the action that this router will apply.</p> <p><b>Both: Pass</b> – The router will let all the packages that match with the conditions specified in URL Access Control and Web Feature below passing through. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p><b>Both: Block</b> –The router will block all the packages that match with the conditions specified in URL Access Control and Web Feature below. When you choose this setting, both configuration set in this page for URL Access Control and Web Feature will be inactive.</p> <p><b>Either: URL Access Control First</b> – When all the packages matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for URL first, then Web feature second.</p> <p><b>Either: Web Feature First</b> –When all the packages</p>

	<p>matching with the conditions specified in URL Access Control and Web Feature below, such function can determine the priority for the actions executed. For this one, the router will process the packages with the conditions set below for web feature first, then URL second.</p> 
<b>Log</b>	<p><b>None</b> – There is no log file will be recorded for this profile.  <b>Pass</b> – Only the log about Pass will be recorded in Syslog.  <b>Block</b> – Only the log about Block will be recorded in Syslog.  <b>All</b> – All the actions (Pass and Block) will be recorded in Syslog.</p> 
<b>URL Access Control</b>	<p><b>Enable URL Access Control</b> - Check the box to activate URL Access Control. Note that the priority for <b>URL Access Control</b> is higher than <b>Restrict Web Feature</b>. If the web content match the setting set in URL Access Control, the router will execute the action specified in this field and ignore the action specified under Restrict Web Feature.</p> <p><b>Prevent web access from IP address</b> - Check the box to deny any web surfing activity using IP address, such as http://202.6.3.2. The reason for this is to prevent someone dodges the URL Access Control. You must clear your browser cache first so that the URL content filtering facility operates properly on a web page that you visited before.</p> <p><b>Action</b> – This setting is available only when <b>Either : URL Access Control First</b> or <b>Either : Web Feature First</b> is selected.</p> <p><b>Pass</b> - Allow accessing into the corresponding webpage with the keywords listed on the box below.</p> <p><b>Block</b> - Restrict accessing into the corresponding webpage with the keywords listed on the box below.  If the web pages do not match with the keyword set here, it will be processed with reverse action.</p> <p>Action:</p>  <p><b>Group/Object Selections</b> – The Vigor router provides several frames for users to define keywords and each frame</p>

supports multiple keywords. The keyword could be a noun, a partial noun, or a complete URL string. Multiple keywords within a frame are separated by space, comma, or semicolon. In addition, the maximal length of each frame is 32-character long. After specifying keywords, the Vigor router will decline the connection request to the website whose URL string matched to any user-defined keyword. It should be noticed that the more simplified the blocking keyword list is, the more efficiently the Vigor router performs.

## Web Feature

**Enable Restrict Web Feature** - Check this box to make the keyword being blocked or passed.

**Action** - This setting is available only when **Either: URL Access Control First** or **Either: Web Feature First** is selected. **Pass** allows accessing into the corresponding webpage with the keywords listed on the box below.

**Pass** - Allow accessing into the corresponding webpage with the keywords listed on the box below.

**Block** - Restrict accessing into the corresponding webpage with the keywords listed on the box below.

If the web pages do not match with the specified feature set here, it will be processed with reverse action.

**Cookie** - Check the box to filter out the cookie transmission from inside to outside world to protect the local user's privacy.

**Proxy** - Check the box to reject any proxy transmission. To control efficiently the limited-bandwidth usage, it will be of great value to provide the blocking mechanism that filters out the multimedia files downloading from web pages.

**Upload** - Check the box to block the file upload by way of web page.

**File Extension Profile** - Choose one of the profiles that you configured in **Object Setting>> File Extension**

	<p><b>Objects</b> previously for passing or blocking the file downloading.</p> <p>File Extension Profile: <span style="border: 1px solid black; padding: 2px;">None</span></p> <p><span style="border: 1px solid black; padding: 2px;">None</span></p> <p><span style="border: 1px solid black; padding: 2px;">1-image</span></p>
--	---

After finishing all the settings, please click **OK** to save the configuration.

#### 4.9.4 Web Content Filter Profile

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

Service Activation Wizard allows you to use trial version of WCF directly without accessing into the server (**MyVigor**) located on <http://myvigor.draytek.com>.

However, if you use the **Web Content Filter Profile** page to activate WCF feature, it is necessary for you to access into the server (**MyVigor**) located on <http://myvigor.draytek.com>. Therefore, you need to register an account on <http://myvigor.draytek.com> for using corresponding service. Please refer to section of creating MyVigor account.

**Note:** If you have used **Service Activation Wizard** to activate WCF service, you can skip this section.

WCF adopts the mechanism developed and offered by certain service provider (e.g., DrayTek). No matter activating WCF feature or getting a new license for web content filter, you have to click **Activate** to satisfy your request. Note that service provider matching with Vigor router currently offers a period of time for trial version for users to experiment. If you want to purchase a formal edition, simply contact with the channel partner or your dealer.

Click **CSM** and click **Web Content Filter Profile** to open the profile setting page. The default setting for Setup Query Server /Setup Test Server is **auto-selected**. You can choose another server for your necessity by clicking **Find more** to open <http://myvigor.draytek.com> for searching another qualified and suitable one.

**Note 1:** Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by **CommTouch**. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

**Note 2:** CommTouch is merged by **Cyren**, and **GlobalView** services will be continued to deliver powerful cloud-based information security solutions! Refer to: <http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html>

After finishing all the settings, please click **OK** to save the configuration.

## 4.9.5 DNS Filter Profile

The DNS Filter monitors DNS queries on UDP port 53 and will pass the DNS query information to the WCF to help with categorizing HTTPS URL's.

DNS can be specified in **LAN>>General Setup** by using the server (e.g., 168.95.1.1) on router or external DNS server (e.g., 8.8.8.8). If the router server is used, **DNS Filter General Setting** will be applied to DNS query from clients on LAN. However, if the external DNS server is used, **DNS Filter** profile will be applied to DNS query coming from clients on LAN.

**Note:** For DNS filter must use the WCF service profile to filter the packets, therefore WCF license must be activated first. Otherwise, DNS filter does not have any effect on packets.

### CSM >> DNS Filter

## 4.10 Bandwidth Management

Below shows the menu items for Bandwidth Management.

### 4.10.1 Sessions Limit

A PC with private IP address can access to the Internet via NAT router. The router will generate the records of NAT sessions for such connection. The P2P (Peer to Peer) applications (e.g., BitTorrent) always need many sessions for proccession and also they will occupy over resources which might result in important accesses impacted. To solve the problem, you can use limit session to limit the session proccession for specified Hosts.

In the **Bandwidth Management** menu, click **Sessions Limit** to open the web page.

**Bandwidth Management >> Sessions Limit**

**Sessions Limit**

☐ Enable ☒ Disable

Default Max Sessions:

**Limitation List**

Index	Start IP	End IP	Max Sessions
-------	----------	--------	--------------

**Specific Limitation**

Start IP:  End IP:

Maximum Sessions:

**Administration Message** (Max 256 characters) **Preview** |

You have reached the maximum number of permitted Internet sessions.<p>Please close one or more applications to allow further Internet access.<p>Contact your system administrator for further information.

**Time Schedule**

Index(1-15) in **Schedule** Setup: , , ,

**Note:** Action and Idle Timeout settings will be ignored.

To activate the function of limit session, simply click **Enable** and set the default session limit. Available settings are explained as follows:

Item	Description
Session Limit	<b>Enable</b> - Click this button to activate the function of limit session.
	<b>Disable</b> - Click this button to close the function of limit

	<p>session.</p> <p><b>Default session limit</b> - Defines the default session number used for each computer in LAN.</p>
<b>Limitation List</b>	<p>Displays a list of specific limitations that you set on this web page.</p>
<b>Specific Limitation</b>	<p><b>Start IP</b>- Defines the start IP address for limit session.</p> <p><b>End IP</b> - Defines the end IP address for limit session.</p> <p><b>Maximum Sessions</b> - Defines the available session number for each host in the specific range of IP addresses. If you do not set the session number in this field, the system will use the default session limit for the specific limitation you set for each index.</p> <p><b>Add</b> - Adds the specific session limitation onto the list above.</p> <p><b>Edit</b> - Allows you to edit the settings for the selected limitation.</p> <p><b>Delete</b> - Remove the selected settings existing on the limitation list.</p>
<b>Administration Message</b>	<p>Type the words which will be displayed when reaches the maximum number of Internet sessions permitted.</p> <p><b>Default Message</b> - Click this button to apply the default message offered by the router.</p>
<b>Time Schedule</b>	<p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

After finishing all the settings, please click **OK** to save the configuration.

## 4.10.2 Bandwidth Limit

The downstream or upstream from FTP, HTTP or some P2P applications will occupy large of bandwidth and affect the applications for other programs. Please use Limit Bandwidth to make the bandwidth usage more efficient.

In the **Bandwidth Management** menu, click **Bandwidth Limit** to open the web page.

Bandwidth Management >> Bandwidth Limit

Bandwidth Limit

☒ Enable ☐ IP Routed Subnet ☒ Disable

TX Limit :   RX Limit :

Note : For TX/RX, a setting of "0" means unlimited bandwidth.

Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

To activate the function of limit bandwidth, simply click **Enable** and set the default upstream and downstream limit.

Available settings are explained as follows:

Item	Description
<b>Bandwidth Limit</b>	<p><b>Enable</b> - Click this button to activate the function of limit bandwidth.</p> <p><b>IP Routed Subnet</b> - Check this box to apply the bandwidth limit to the second subnet specified in <b>LAN&gt;&gt;General Setup</b>.</p> <p><b>Disable</b> - Click this button to close the function of limit bandwidth.</p> <p><b>Default TX limit</b> - Define the default speed of the upstream for each computer in LAN.</p> <p><b>Default RX limit</b> - Define the default speed of the</p>

	<p>downstream for each computer in LAN.</p> <p><b>Allow auto adjustment</b>...- Check this box to make the best utilization of available bandwidth.</p>
<b>Limitation List</b>	<p>Display a list of specific limitations that you set on this web page.</p>
<b>Specific Limitation</b>	<p><b>Start IP</b> - Define the start IP address for limit bandwidth.</p> <p><b>End IP</b> - Define the end IP address for limit bandwidth.</p> <p><b>Each /Shared</b> - Select <b>Each</b> to make each IP within the range of Start IP and End IP having the same speed defined in TX limit and RX limit fields; select <b>Shared</b> to make all the IPs within the range of Start IP and End IP share the speed defined in TX limit and RX limit fields.</p> <p><b>TX limit</b> - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>RX limit</b> - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>Add</b> - Add the specific speed limitation onto the list above.</p> <p><b>Edit</b> - Allow you to edit the settings for the selected limitation.</p> <p><b>Delete</b> - Remove the selected settings existing on the limitation list.</p>
<b>Smart Bandwidth Limit</b>	<p>Check this box to have the bandwidth limit determined by the system automatically.</p> <p><b>TX limit</b> - Define the limitation for the speed of the upstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p> <p><b>RX limit</b> - Define the limitation for the speed of the downstream. If you do not set the limit in this field, the system will use the default speed for the specific limitation you set for each index.</p>
<b>Time Schedule</b>	<p><b>Index (1-15) in Schedule Setup</b> - You can type in four sets of time schedule for your request. All the schedules can be set previously in <b>Application &gt;&gt; Schedule</b> web page and you can use the number that you have set in that web page.</p>

### 4.10.3 Quality of Service

Deploying QoS (Quality of Service) management to guarantee that all applications receive the service levels required and sufficient bandwidth to meet performance expectations is indeed one important aspect of modern enterprise network.

One reason for QoS is that numerous TCP-based applications tend to continually increase their transmission rate and consume all available bandwidth, which is called TCP slow start. If other applications are not protected by QoS, it will detract much from their performance in the overcrowded network. This is especially essential to those are low tolerant of loss, delay or jitter (delay variation).

Another reason is due to congestions at network intersections where speeds of interconnected circuits mismatch or traffic aggregates, packets will queue up and traffic can be throttled back to a lower speed. If there's no defined priority to specify which packets should be discarded (or in another term "dropped") from an overflowing queue, packets of sensitive applications mentioned above might be the ones to drop off. How this will affect application performance?

There are two components within Primary configuration of QoS deployment:

- **Classification:** Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- **Scheduling:** Based on classification of service level to assign packets to queues and associated service types

The basic QoS implementation in Vigor routers is to classify and schedule packets based on the service type information in the IP header. For instance, to ensure the connection with the headquarter, a teleworker may enforce an index of QoS Control to reserve bandwidth for HTTPS connection while using lots of application at the same time.

One more larger-scale implementation of QoS network is to apply DSCP (Differentiated Service Code Point) and IP Precedence disciplines at Layer 3. Compared with legacy IP Precedence that uses Type of Service (ToS) field in the IP header to define 8 service classes, DSCP is a successor creating 64 classes possible with backward IP Precedence compatibility. In a QoS-enabled network, or Differentiated Service (DiffServ or DS) framework, a DS domain owner should sign a Service License Agreement (SLA) with other DS domain owners to define the service level provided toward traffic from different domains. Then each DS node in these domains will perform the priority treatment. This is called per-hop-behavior (PHB). The definition of PHB includes Expedited Forwarding (EF), Assured Forwarding (AF), and Best Effort (BE). AF defines the four classes of delivery (or forwarding) classes and three levels of drop precedence in each class.

Vigor routers as edge routers of DS domain shall check the marked DSCP value in the IP header of bypassing traffic, thus to allocate certain amount of resource execute appropriate policing, classification or scheduling. The core routers in the backbone will do the same checking before executing treatments in order to ensure service-level consistency throughout the whole QoS-enabled network.

However, each node may take different attitude toward packets with high priority marking since it may bind with the business deal of SLA among different DS domain owners. It's not easy to achieve deterministic and consistent high-priority QoS traffic throughout the whole network with merely Vigor router's effort.

## Bandwidth management with intelligent VoIP QoS

Small offices normally choose the affordable Internet plan instead of increasing the bandwidth over 100Mbps. Hence, how to reserve and prioritize bandwidth for the essential applications is critical to operation. The Vigor2132 Series has VoIP QoS (the option of **Enable the First Priority for VoIP SIP/RTP**) to guarantee the priority for VoIP calls automatically once VoIP calls was detected.

In addition to QoS, you can manage the bandwidth consumption of every employee based on the individual IP via Session Limit and Bandwidth Limit. The Smart Bandwidth Limit allows you to only set bandwidth reservation for PCs operated essential tasks. Other PCs have the session limitation to prevent the inappropriate usages (e.g. P2P download). Once exceeding the limitation, their speed rates will be downgrade to your customized numbers. You can guarantee all subscribed bandwidth to have proper usage.

In the **Bandwidth Management** menu, click **Quality of Service** to open the web page.

Bandwidth Management >> Quality of Service

General Setup
[Set to Factory Default](#)

Class 3		<a href="#">Edit</a>	

☒ **Enable the First Priority for VoIP SIP/RTP:**  
 SIP UDP Port:  (Default: 5060)
 

[OK](#)

Available settings are explained as follows:

Item	Description
General Setup	<b>Index</b> - Display the WAN interface number that you can edit.
	<b>Status</b> - Display if the WAN interface is available for such function or not.

Item	Description
	<p><b>Bandwidth</b> – Display the inbound and outbound bandwidth setting for the WAN interface.</p> <p><b>Direction</b> – Display which direction that such function will influence.</p> <p><b>Class 1/Class2/Class 3/Others</b> – Display the bandwidth percentage for each class.</p> <p><b>UDP Bandwidth Control</b> – Display the UDP bandwidth control is enabled or not.</p> <p><b>Online Statistics</b> – Display an online statistics for quality of service for your reference</p> <p><b>Setup</b> – Allow to configure general QoS setting for WAN interface.</p>
<b>Class Rule</b>	<p><b>Index</b> – Display the class number that you can edit.</p> <p><b>Name</b> – Display the name of the class.</p> <p><b>Rule</b> – Allow to configure detailed settings for the selected Class.</p> <p><b>Service Type</b> – Allow to configure detailed settings for the service type.</p>
<b>Enable the First Priority for VoIP SIP/RTP</b>	<p>When this feature is enabled, the VoIP SIP/UDP packets will be sent with highest priority.</p> <p><b>SIP UDP Port</b> – Set a port number used for SIP.</p>

This page displays the QoS settings result of the WAN interface. Click the **Setup** link to access into next page for the general setup of WAN interface. As to class rule, simply click the **Edit** link to access into next for configuration.

You can configure general setup for the WAN interface, edit the Class Rule, and edit the Service Type for the Class Rule for your request.

## Online Statistics

Display an online statistics for quality of service for your reference. This feature is available only when the Quality of Service for WAN interface is enabled.

## WAN2 Online Statistics

Refresh Interval: 5 seconds

Refresh

Index	Direction	Class Name	Reserved-bandwidth Ratio	Outbound Throughput (Bytes/sec)
1	OUT	VoIP	---	0
2	OUT		25%	0
3	OUT		25%	0
4	OUT		25%	0
5	OUT	Others	25%	0

Cancel

## General Setup for WAN Interface

When you click **Setup**, you can configure the bandwidth ratio for QoS of the WAN interface. There are four queues allowed for QoS control. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. Yet, the last one is reserved for the packets which are not suitable for the user-defined class rules.

### Bandwidth Management >> Quality of Service

#### WAN1 General Setup

☐ Enable the QoS Control

OUT

WAN Inbound Bandwidth		<input type="text" value="100"/>	<input type="radio"/> Kbps	<input checked="" type="radio"/> Mbps

Class 3		<input type="text" value="25"/>	%	
	Others	<input type="text" value="25"/>	%	
<input type="checkbox"/> Enable UDP Bandwidth Control		Limited_bandwidth Ratio <input type="text" value="25"/> %		
<input type="checkbox"/> Outbound TCP ACK Prioritize				

**Note:**1.Before enable QoS, you should test the real bandwidth first. QoS may not work properly if the bandwidth is not accurate.

2.You can do speed test by <http://speedtest.net> or contact with your ISP for speed test program.

OK

Clear

Cancel

Available settings are explained as follows:

Item	Description
Enable the QoS Control	The factory default for this setting is checked. Please also define which traffic the QoS Control settings will apply to.

	<p><b>IN</b> - apply to incoming traffic only.</p> <p><b>OUT</b> - apply to outgoing traffic only.</p> <p><b>BOTH</b> - apply to both incoming and outgoing traffic.</p> <p>Check this box and click <b>OK</b>, then click <b>Setup</b> link again. You will see the <b>Online Statistics</b> link appearing on this page.</p>
<b>WAN Inbound Bandwidth</b>	It allows you to set the connecting rate of data input for WAN interface. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 1000kbps for this box. The default value is 10000kbps.
<b>WAN Outbound Bandwidth</b>	It allows you to set the connecting rate of data output for WAN interface. For example, if your ADSL supports 1M of downstream and 256K upstream, please set 256kbps for this box. The default value is 10000kbps.
<b>Reserved Bandwidth Ratio</b>	It is reserved for the group index in the form of ratio of <b>reserved bandwidth to upstream speed</b> and <b>reserved bandwidth to downstream speed</b> .
<b>Enable UDP Bandwidth Control</b>	Check this and set the limited bandwidth ratio on the right field. This is a protection of TCP application traffic since UDP application traffic such as streaming video will exhaust lots of bandwidth.
<b>Outbound TCP ACK Prioritize</b>	The difference in bandwidth between download and upload are great in ADSL2+ environment. For the download speed might be impacted by the uploading TCP ACK, you can check this box to push ACK of upload faster to speed the network traffic.
<b>Limited_bandwidth Ratio</b>	The ratio typed here is reserved for limited bandwidth of UDP application.

**Note:** The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

### Edit the Class Rule for QoS

1. The first three (Class 1 to Class 3) class rules can be adjusted for your necessity. To add, edit or delete the class rule, please click the **Edit** link of that one.

Bandwidth Management >> Quality of Service

**General Setup** | [Set to Factory Default](#) |

Index	Status	Bandwidth	Direction	Class 1	Class 2	Class 3	Others	UDP Bandwidth Control	Online Statistics

Item	Description
<b>Service Name</b>	Type in a new service for your request. The maximum length of the name you can set is 11 characters.
<b>Service Type</b>	Choose the type (TCP, UDP or TCP/UDP or other) for the new service.
<b>Port Configuration</b>	<p><b>Type</b> - Click <b>Single</b> or <b>Range</b> as the <b>Type</b>. If you select Range, you have to type in the starting port number and the end porting number on the boxes below.</p> <p><b>Port Number</b> – Type in the starting port number and the end porting number here if you choose Range as the type.</p>

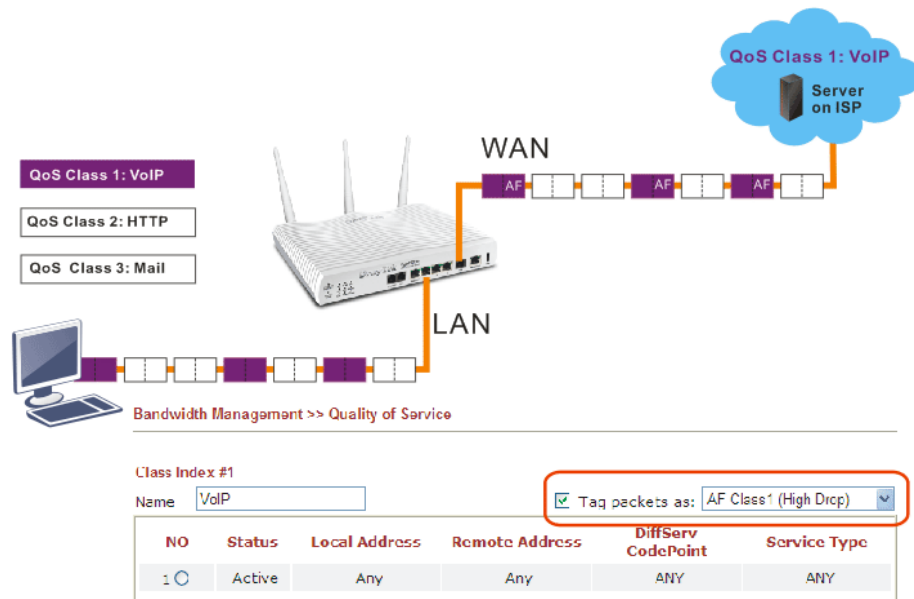

4. After finishing all the settings here, please click **OK** to save the configuration.

By the way, you can set up to 10 service types. If you want to edit/delete an existed service type, please select the radio button of that one and click **Edit/Delete** for modification.

## Retag the Packets for Identification

Packets coming from LAN IP can be retagged through QoS setting. When the packets sent out through WAN interface, all of them will be tagged with certain header and that will be easily to be identified by server on ISP.

For example, in the following illustration, the VoIP packets in LAN go into Vigor router without any header. However, when they go forward to the Server on ISP through Vigor router, all of the packets are tagged with AF (configured in Bandwidth >>QoS>>Class) automatically.

## 4.11 Applications

Below shows the menu items for Applications.

### 4.11.1 Dynamic DNS

The ISP often provides you with a dynamic IP address when you connect to the Internet via your ISP. It means that the public IP address assigned to your router changes each time you access the Internet. The Dynamic DNS feature lets you assign a domain name to a dynamic WAN IP address. It allows the router to update its online WAN IP address mappings on the specified Dynamic DNS server. Once the router is online, you will be able to use the registered domain name to access the router or internal virtual servers from the Internet. It is particularly helpful if you host a web server, FTP server, or other server behind the router.

Before you use the Dynamic DNS feature, you have to apply for free DDNS service to the DDNS service providers. The router provides up to three accounts from three different DDNS service providers. Basically, Vigor routers are compatible with the DDNS services supplied by most popular DDNS service providers such as [www.dyndns.org](http://www.dyndns.org), [www.no-ip.com](http://www.no-ip.com), [www.dtdns.com](http://www.dtdns.com), [www.changeip.com](http://www.changeip.com), [www.dynamic-nameserver.com](http://www.dynamic-nameserver.com). You should visit their websites to register your own domain name for the router.

#### Enable the Function and Add a Dynamic DNS Account

1. Assume you have a registered domain name from the DDNS provider, say *hostname.dyndns.org*, and an account with username: *test* and password: *test*.
2. In the DDNS setup menu, check **Enable Dynamic DNS Setup**.

Applications >> Dynamic DNS Setup

Dynamic DNS Setup

Set to Factory Default

☒ Enable Dynamic DNS Setup

View Log

Force Update

Auto-Update interval  Min(s) (1~14400)

Accounts:

Index	Domain Name	Active
1.		X
2.		X
3.		X
4.		X
5.		X
6.		X

OK

Clear All

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles and recover to factory settings.
<b>Enable Dynamic DNS Setup</b>	Check this box to enable DDNS function.
<b>View Log</b>	Display DDNS log status.
<b>Force Update</b>	Force the router updates its information to DDNS server.
<b>Auto-Update interval</b>	Set the time for the router to perform auto update for DDNS service.
<b>Index</b>	Click the number below Index to access into the setting page of DDNS setup to set account(s).
<b>Domain Name</b>	Display the domain name that you set on the setting page of DDNS setup.
<b>Active</b>	Display if this account is active or inactive.

3. Select Index number 1 to add an account for the router. Check **Enable Dynamic DNS Account**, and choose correct Service Provider: dyndns.org, type the registered hostname: *hostname* and domain name suffix: dyndns.org in the **Domain Name** block. The following two blocks should be typed your account Login Name: *test* and Password: *test*.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

☒ Enable Dynamic DNS Account

WAN Interface WAN1 First

Service Provider dyndns.org (www.dyndns.org)

Service Type Dynamic

Domain Name chronic6653 .dyndns.org dyndns.org

Login Name chronic6653 (max. 64 characters)

Password ..... (max. 23 characters)

☐ Wildcards

☐ Backup MX

Determine Real WAN IP Internet IP

## Index : 1

<input checked="" type="checkbox"/>	Enable Dynamic DNS Account
Service Provider	dyn.com (www.dyn.com) ▼
Service Type	Dynamic ▼
Domain Name	chronic5536 . dyndns.org ▼ dyndns.org ▼
Login Name	chronic5536 (max. 64 characters)
Password	***** (max. 23 characters)
<input type="checkbox"/>	Wildcards
<input type="checkbox"/>	Backup MX
Mail Extender	
Determine Real WAN IP	Internet IP ▼

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Enable Dynamic DNS Account</b>	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
<b>Service Provider</b>	Select the service provider for the DDNS account.
<b>Service Type</b>	Select a service type (Dynamic, Custom or Static). If you choose Custom, you can modify the domain that is chosen in the Domain Name field.
<b>Domain Name</b>	Type in one domain name that you applied previously. Use the drop down list to choose the desired domain.
<b>Login Name</b>	Type in the login name that you set for applying domain.
<b>Password</b>	Type in the password that you set for applying domain.
<b>Wildcard and Backup MX</b>	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.
<b>Mail Extender</b>	If the mail server is defined with another name, please type the name in this area. Such mail server will be used as backup mail exchange.
<b>Determine Real WAN IP</b>	<p>If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP.</p> <p>When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update.</p> <p>There are two methods offered for you to choose:</p> <ul style="list-style-type: none"> <li>● <b>WAN IP</b> - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away.</li> <li>● <b>Internet IP</b> – If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.</li> </ul>

4. Click **OK** button to activate the settings. You will see your setting has been saved.

#### **Disable the Function and Clear all Dynamic DNS Accounts**

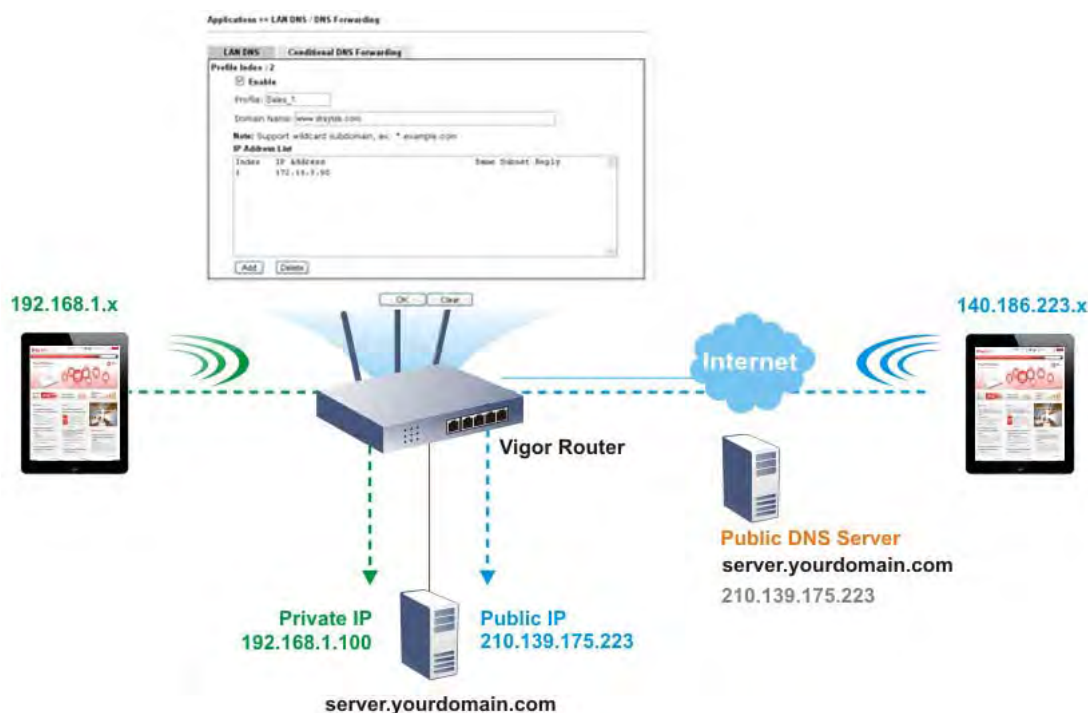

In the DDNS setup menu, uncheck **Enable Dynamic DNS Setup**, and push **Clear All** button to disable the function and clear all accounts from the router.

#### **Delete a Dynamic DNS Account**

In the DDNS setup menu, click the **Index** number you want to delete and then push **Clear All** button to delete the account.

## 4.11.2 LAN DNS / DNS Forwarding

The LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2132 Series will respond the specified private IP address.

Open **Application>>LAN DNS** to get the following page:

Applications >> LAN DNS / DNS Forwarding

LAN DNS Resolution / Conditional DNS Forwarding						<a href="#">Set to Factory Default</a>
Enable	Index	Profile	Domain Name	Forwarding	DNS Server	
<input type="checkbox"/>	1.			-		
<input type="checkbox"/>	2.			-		
<input type="checkbox"/>	3.			-		
<input type="checkbox"/>	4.			-		
<input type="checkbox"/>	5.			-		
<input type="checkbox"/>	6.			-		
<input type="checkbox"/>	7.			-		
<input type="checkbox"/>	8.			-		
<input type="checkbox"/>	9.			-		
<input type="checkbox"/>	10.			-		

<< 1-10 | 11-20 >>

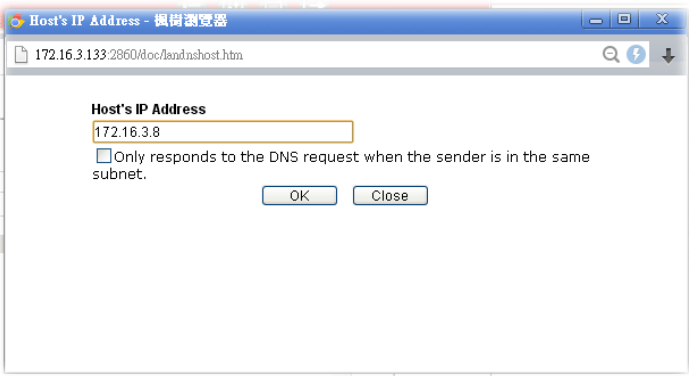

OK

Each item is explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles and recover to factory settings.
<b>Enable</b>	Check the box to enable the selected profile.

● **Only responds to the DNS....** – Different LAN PCs can share the same domain name. However, you have to check this box to make the router identify & respond the IP address for the DNS query coming from different LAN PC.

**Delete** – Click it to remove an existed IP address on the list.

3. Click **OK** button to save the settings.
4. If you need to configure LAN DNS settings, click index 1 to edit the LAN DNS profile just created. Or, you can click index 2 to use this profile as conditional DNS forwarding.

**Applications >> LAN DNS / DNS Forwarding**

LAN DNS	Conditional DNS Forwarding
<b>Profile Index : 1</b> <input checked="" type="checkbox"/> <b>Enable</b> Profile: <input type="text" value="LAN_D1"/> Domain Name: <input style="width: 250px;" type="text"/> <b>Note:</b> Support wildcard subdomain, ex: *.example.com DNS Server IP Address: <input style="width: 350px;" type="text"/>	
<input type="button" value="OK"/> <input type="button" value="Clear"/>	

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable such profile.
<b>Profile</b>	Type a name for such profile. <b>Note:</b> If you type a name here for conditional DNS forwarding and click <b>OK</b> to save the configuration, the name also will be applied to LAN DNS automatically.
<b>Domain Name</b>	Type the domain name for such profile.
<b>DNS Server IP Address</b>	Type the IP address of the DNS server you want to use for DNS forwarding.

5. Click **OK** button to save the settings.
6. A new LAN DNS profile has been created.

LAN DNS Resolution / Conditional DNS Forwarding					<a href="#">Set to Factory Default</a>
Enable	Index	Profile	Domain Name	Forwarding	DNS Server
<input checked="" type="checkbox"/>	<u>1.</u>	sales_1	www.draytek.com	-

### 4.11.3 Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of the Network Time Protocols (NTP) selected on **System Maintenance>>Time and Date**. You can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

You have to set your time before set schedule. In **System Maintenance>> Time and Date** menu, press **Inquire Time** button to set the Vigor router's clock to current time of your PC. The clock will reset once if you power down or reset the router. There is another way to set up time. You can inquiry an NTP server (a time server) on the Internet to synchronize the router's clock. This method can only be applied when the WAN connection has been built up.

Applications &gt;&gt; Schedule

Schedule:				<a href="#">Set to Factory Default</a>
Index	Status	Index	Status	
<u>1.</u>	x	<u>9.</u>	x	
<u>2.</u>	x	<u>10.</u>	x	
<u>3.</u>	x	<u>11.</u>	x	
<u>4.</u>	x	<u>12.</u>	x	
<u>5.</u>	x	<u>13.</u>	x	
<u>6.</u>	x	<u>14.</u>	x	
<u>7.</u>	x	<u>15.</u>	x	
<u>8.</u>	x			

Status: v --- Active, x --- Inactive

Each item is explained as follows:

Item	Description
<b>Set to Factory Default</b>	Clear all profiles and recover to factory settings.
<b>Index</b>	Click the number below Index to access into the setting page of schedule.
<b>Status</b>	Display if this schedule setting is active or inactive.

You can set up to 15 schedules. Then you can apply them to your **Internet Access** or **VPN and Remote Access >> LAN-to-LAN** settings.

To add a schedule:

1. Click any index, say Index No. 1.
2. The detailed settings of the call schedule with index 1 are shown below.

Applications >> Schedule

Index No. 1

☒ Enable Schedule Setup

Start Date (yyyy-mm-dd) 2000 1 1

Start Time (hh:mm) 0 : 0

Duration Time (hh:mm) 0 : 0

Action Force On

Idle Timeout 0 minute(s).(max. 255, 0 for default)

How Often

☐ Once

☒ Weekdays

☐ Sun ☒ Mon ☒ Tue ☒ Wed ☒ Thu ☒ Fri ☐ Sat

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>Enable Schedule Setup</b>	Check to enable the schedule.
<b>Start Date (yyyy-mm-dd)</b>	Specify the starting date of the schedule.
<b>Start Time (hh:mm)</b>	Specify the starting time of the schedule.
<b>Duration Time (hh:mm)</b>	Specify the duration (or period) for the schedule.
<b>Action</b>	Specify which action Call Schedule should apply during the period of the schedule. <b>Force On</b> -Force the connection to be always on. <b>Force Down</b> -Force the connection to be always down. <b>Enable Dial-On-Demand</b> -Specify the connection to be dial-on-demand and the value of idle timeout should be specified in <b>Idle Timeout</b> field. <b>Disable Dial-On-Demand</b> -Specify the connection to be up when it has traffic on the line. Once there is no traffic over idle timeout, the connection will be down and never up again during the schedule.
<b>Idle Timeout</b>	Specify the duration (or period) for the schedule. <b>How often</b> -Specify how often the schedule will be applied <b>Once</b> -The schedule will be applied just once <b>Weekdays</b> -Specify which days in one week should perform the schedule.

3. Click **OK** button to save the settings.

### Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

**Office**

**Hour:**

**(Force On)**

**Mon - Sun      9:00 am      to      6:00 pm**

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

## 4.11.4 RADIUS

### RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Applications >> RADIUS

#### RADIUS Setup

<input type="checkbox"/> Enable	
Server IP Address	<input type="text"/>
Destination Port	<input type="text" value="1812"/>
Shared Secret	<input type="text"/>
Confirm Shared Secret	<input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check to enable RADIUS client feature.
<b>Server IP Address</b>	Enter the IP address of RADIUS server
<b>Destination Port</b>	The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138.
<b>Shared Secret</b>	The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters.
<b>Confirm Shared Secret</b>	Re-type the Shared Secret for confirmation.

After finished the above settings, click **OK** button to save the settings.

## 4.11.5 UPnP

The **UPnP** (Universal Plug and Play) protocol is supported to bring to network connected devices the ease of installation and configuration which is already available for directly connected PC peripherals with the existing Windows 'Plug and Play' system. For NAT routers, the major feature of UPnP on the router is "NAT Traversal". This enables applications inside the firewall to automatically open the ports that they need to pass through a router.

**Note:** UPnP is required for some applications such as PPS, Skype, eMule...and etc. If you are not familiar with UPnP, it is suggested to turn off this function for security.

Applications >> UPnP

### UPnP

- ☒ Enable UPnP Service
- ☐ Enable Connection Control Service
- ☐ Enable Connection Status Service

**Note:** To allow NAT pass-through to a UPnP-enabled client on the LAN, enable UPnP service above and ensure that the used connection service is also ticked.

OK

Clear

Cancel

Available settings are explained as follows:

Item	Description
Enable UPNP Service	Accordingly, you can enable either the <b>Connection Control Service</b> or <b>Connection Status Service</b> .

The reminder as regards concern about Firewall and UPnP

### Can't work with Firewall Software

Enabling firewall applications on your PC may cause the UPnP function not working properly. This is because these applications will block the accessing ability of some network ports.

### Security Considerations

Activating the UPnP function on your network may incur some security threats. You should consider carefully these risks before activating the UPnP function.

- Some Microsoft operating systems have found out the UPnP weaknesses and hence you need to ensure that you have applied the latest service packs and patches.
- Non-privileged users can control some router functions, including removing and adding port mappings.

The UPnP function dynamically adds port mappings on behalf of some UPnP-aware applications. When the applications terminate abnormally, these mappings may not be removed.

## 4.11.6 IGMP

IGMP is the abbreviation of *Internet Group Management Protocol*. It is a communication protocol which is mainly used for managing the membership of Internet Protocol multicast groups.

Applications >> IGMP

IGMP

☐ **Enable IGMP Proxy**

WAN1

IGMP Proxy acts as a multicasts on the LAN side. Enable IGMP proxy to access any multicast group. This function will be disabled when Bridge Mode is enabled.

☐ **Enable IGMP Snooping**

Enable: Forwards multicast traffic only to ports that are members of that group.  
Disable: Treats multicast traffic the same as broadcast traffic.

OK

Cancel

Working Multicast Groups						<a href="#">Refresh</a>
Index	Group ID	P1	P2	P3	P4	

Available settings are explained as follows:

Item	Description
<b>Enable IGMP Proxy</b>	Check this box to enable this function. The application of multicast will be executed through WAN port. In addition, such function is available in NAT mode.
<b>Enable IGMP Snooping</b>	Check this box to enable this function. Multicast traffic will be forwarded to ports that have members of that group. Disabling IGMP snooping will make multicast traffic treated in the same manner as broadcast traffic.
<b>Refresh</b>	Click this link to renew the working multicast group status.
<b>Group ID</b>	This field displays the ID port for the multicast group. The available range for IGMP starts from 224.0.0.0 to 239.255.255.254.
<b>P1 to P4</b>	It indicates the LAN port used for the multicast group.

After finishing all the settings here, please click **OK** to save the configuration.

### 4.11.7 Wake on LAN

A PC client on LAN can be woken up by the router it connects. When a user wants to wake up a specified PC through the router, he/she must type correct MAC address of the specified PC on this web page of **Wake on LAN (WOL)** of this router.

In addition, such PC must have installed a network card supporting WOL function. By the way, WOL function must be set as “Enable” on the BIOS setting.

Application >> Wake on LAN

#### Wake on LAN

**Note:** Wake on LAN integrates with **Bind IP to MAC** function, only binded PCs can wake up through IP.

Wake by: MAC Address

IP Address: ---

MAC Address:   :  :  :  :  :   Wake Up!

Result

Available settings are explained as follows:

Item	Description
<b>Wake by</b>	Two types provide for you to wake up the bound IP. <ul style="list-style-type: none"><li>● If you choose Wake by <b>MAC Address</b>, you have to type the correct MAC address of the host in MAC Address boxes.</li><li>● If you choose <b>Wake by IP Address</b>, you have to choose the correct IP address.</li></ul>
<b>IP Address</b>	The IP addresses that have been configured in <b>Firewall&gt;&gt;Bind IP to MAC</b> will be shown in this drop down list. Choose the IP address from the drop down list that you want to wake up.
<b>MAC Address</b>	Type any one of the MAC address of the bound PCs.
<b>Wake Up</b>	Click this button to wake up the selected IP. See the following figure. The result will be shown on the box.

### 4.11.8 SMS / Mail Alert Service

The function of SMS (Short Message Service)/Mail Alert is that Vigor router sends a message to user's mobile or e-mail box through specified service provider to assist the user knowing the real-time abnormal situations.

Vigor router allows you to set up to **10** SMS profiles which will be sent out according to different conditions.

#### SMS Provider

This page allows you to specify SMS provider, who will get the SMS, what the content is and when the SMS will be sent.

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	SMS Provider	Recipient	Notify Profile	Schedule(1-15)	
1 <input type="checkbox"/>	1 - ???		1 - ???		
2 <input type="checkbox"/>	1 - ???		1 - ???		
3 <input type="checkbox"/>	1 - ???		1 - ???		
4 <input type="checkbox"/>	1 - ???		1 - ???		
5 <input type="checkbox"/>	1 - ???		1 - ???		
6 <input type="checkbox"/>	1 - ???		1 - ???		
7 <input type="checkbox"/>	1 - ???		1 - ???		
8 <input type="checkbox"/>	1 - ???		1 - ???		
9 <input type="checkbox"/>	1 - ???		1 - ???		
10 <input type="checkbox"/>	1 - ???		1 - ???		

**Note:** All the SMS Alert profiles share the same "Sending Interval" setting if they use the same SMS Provider.

OK Cancel

Available settings are explained as follows:

Item	Description
Index	Check the box to enable such profile.
SMS Provider	Use the drop down list to choose SMS service provider. You can click <b>SMS Provider</b> link to define the SMS server.
Recipient	Type the name of the one who will receive the SMS.
Notify Profile	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the <b>Notify Profile</b> link to define the content of the SMS.
Schedule(1-15)	Type the schedule number that the SMS will be sent out. You can click the <b>Schedule(1-15)</b> link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

## Mail Server

This page allows you to specify Mail Server profile, who will get the notification e-mail, what the content is and when the message will be sent.

Application >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	Mail Service	Recipient	Notify Profile	Schedule(1-15)	
1 <input type="checkbox"/>	1 - ???		1 - ???		
2 <input type="checkbox"/>	1 - ???		1 - ???		
3 <input type="checkbox"/>	1 - ???		1 - ???		
4 <input type="checkbox"/>	1 - ???		1 - ???		
5 <input type="checkbox"/>	1 - ???		1 - ???		
6 <input type="checkbox"/>	1 - ???		1 - ???		
7 <input type="checkbox"/>	1 - ???		1 - ???		
8 <input type="checkbox"/>	1 - ???		1 - ???		
9 <input type="checkbox"/>	1 - ???		1 - ???		
10 <input type="checkbox"/>	1 - ???		1 - ???		

**Note:** All the Mail Alert profiles share the same "Sending Interval" setting if they use the sam Mail Server.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Index</b>	Check the box to enable such profile.
<b>Mail Service</b>	Use the drop down list to choose mail service provider. You can click <b>Mail Service</b> link to define the mail server.
<b>Recipient</b>	Type the e-mail address of the one who will receive the notification message.
<b>Notify Profile</b>	Use the drop down list to choose a message profile. The recipient will get the content stated in the message profile. You can click the <b>Notify Profile</b> link to define the content of the mail message.
<b>Schedule (1-15)</b>	Type the schedule number that the notification will be sent out. You can click the <b>Schedule (1-15)</b> link to define the schedule.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.12 VPN and Remote Access

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

The VPN built is suitable for:

- Communication between home office and customer
- Secure connection between Teleworker, staff on business trip and main office
- Exchange data between remote office and main office
- POS between chain store and headquarters

Below shows the menu items for VPN and Remote Access.

Applications  
VPN and Remote Access  
Remote Access Control  
PPP General Setup  
IPsec General Setup  
IPsec Peer Identity  
Remote Dial-in User  
LAN to LAN  
Connection Management  
Certificate Management

### 4.12.1 Remote Access Control

Enable the necessary VPN service as you need. If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port.

#### VPN and Remote Access >> Remote Access Control Setup

##### Remote Access Control Setup

<input checked="" type="checkbox"/>	Enable PPTP VPN Service
<input checked="" type="checkbox"/>	Enable IPsec VPN Service
<input checked="" type="checkbox"/>	Enable L2TP VPN Service

**Note:** To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT Open Ports or Port Redirection is also configured.

OK Clear Cancel

After finishing all the settings here, please click **OK** to save the configuration.

### 4.12.2 PPP General Setup

This submenu only applies to PPP-related VPN connections, such as PPTP, L2TP, L2TP over IPsec.

#### VPN and Remote Access >> PPP General Setup

##### PPP General Setup

<b>PPP/MP Protocol</b>	
Dial-In PPP Authentication	PAP/CHAP/MS-CHAP/MS-CHAPv2
Dial-In PPP Encryption(MPPE)	Optional MPPE
Mutual Authentication (PAP)	<input type="radio"/> Yes <input checked="" type="radio"/> No
Username	
Password	
<b>IP Address Assignment for Dial-In Users (When DHCP Disable set)</b>	
Assigned IP start LAN 1	192.168.1.200
LAN 2	192.168.2.200
LAN 3	192.168.3.200
LAN 4	192.168.4.200

OK

Available settings are explained as follows:

Item	Description
Dial-In PPP Authentication	<b>PAP Only</b> - elect this option to force the router to authenticate dial-in users with the PAP protocol. <b>PAP/CHAP/MS-CHAP/MS-CHAPv2</b> - Selecting this option means the router will attempt to authenticate dial-in users with the CHAP protocol first. If the dial-in user does not support this protocol, it will fall back to use the PAP

	protocol for authentication.
<b>Dial-In PPP Encryption (MPPE)</b>	<p><b>Optional MPPE</b> - This option represents that the MPPE encryption method will be optionally employed in the router for the remote dial-in user. If the remote dial-in user does not support the MPPE encryption algorithm, the router will transmit “no MPPE encrypted packets”. Otherwise, the MPPE encryption scheme will be used to encrypt the data.</p> <ul style="list-style-type: none"> <li>● <b>Require MPPE (40/128bits)</b> - Selecting this option will force the router to encrypt packets by using the MPPE encryption algorithm. In addition, the remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data.</li> <li>● <b>Maximum MPPE</b> - This option indicates that the router will use the MPPE encryption scheme with maximum bits (128-bit) to encrypt the data.</li> </ul>
<b>Mutual Authentication (PAP)</b>	<p>The Mutual Authentication function is mainly used to communicate with other routers or clients who need bi-directional authentication in order to provide stronger security, for example, Cisco routers. So you should enable this function when your peer router requires mutual authentication. You should further specify the <b>User Name</b> and <b>Password</b> of the mutual authentication peer.</p> <p>The length of the name/password is limited to 23/19 characters.</p>
<b>Assigned IP Start</b>	<p>Enter a start IP address for the dial-in PPP connection. You should choose an IP address from the local private network. For example, if the local private network is 192.168.1.0/255.255.255.0, you could choose 192.168.1.200 as the Start IP Address.</p> <p>You can configure up to four start IP addresses for LAN1 ~ LAN4.</p>

### 4.12.3 IPSec General Setup

In **IPSec General Setup**, there are two major parts of configuration.

There are two phases of IPSec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPSec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPSec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPSec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

Authentication Header (AH) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

Encapsulating Security Payload (ESP) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

#### VPN and Remote Access >> IPSec General Setup

##### VPN IKE/IPsec General Setup

Dial-in Set up for Remote Dial-in users and Dynamic IP Client (LAN to LAN).

**IKE Authentication Method**

Pre-Shared Key

Confirm Pre-Shared Key

**IPsec Security Method**

☒ Medium (AH)  
Data will be authentic, but will not be encrypted.

High (ESP) ☒ DES ☒ 3DES ☒ AES  
Data will be encrypted and authentic.

Available settings are explained as follows:

Item	Description
<b>IKE Authentication Method</b>	This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPSec-related VPN connections such as L2TP over IPSec and IPSec tunnel. There is one method offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, <b>Pre-Shared Key</b> .

	<p><b>Pre-Shared Key</b>- Specify a key for IKE authentication.</p> <p><b>Confirm Pre-Shared Key</b>- Retype the characters to confirm the pre-shared key.</p> <p><b>Note:</b> Any packets from the remote dial-in user which does not match the rule defined in <b>VPN and Remote Access&gt;&gt;Remote Dial-In User</b> will be applied with the method specified here.</p>
<b>IPSec Security Method</b>	<p><b>Medium</b> - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</p> <p><b>High (ESP)</b> - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p>

After finishing all the settings here, please click **OK** to save the configuration.

## 4.12.4 IPSec Peer Identity

To use digital certificate for peer authentication in either LAN-to-LAN connection or Remote User Dial-In connection, here you may edit a table of peer certificate for selection. As shown below, the router provides **32** entries of digital certificates for peer dial-in users.

**VPN and Remote Access >> IPSec Peer Identity**

X509 Peer ID Accounts:

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Click it to clear all indexes.
<b>Index</b>	Click the number below Index to access into the setting page of IPSec Peer Identity.
<b>Name</b>	Display the profile name of that index.

Click each index to edit one peer digital certificate. There are three security levels of digital signature authentication: Fill each necessary field to authenticate the remote peer. The following explanation will guide you to fill all the necessary fields.

VPN and Remote Access >> IPsec Peer Identity

Profile Index : 4

Profile Name

☒ Enable this account

☐ Accept Any Peer ID

☒ Accept Subject Alternative Name

Type

Domain Name

☐ Accept Subject Name

Country (C)

State (ST)

Location (L)

Organization (O)

Organization Unit (OU)

Common Name (CN)

Email (E)

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Type the name of the profile. The maximum length of the name you can set is 32 characters.
<b>Enable this account</b>	Check it to enable such account profile.
<b>Accept Any Peer ID</b>	Click to accept any peer regardless of its identity.
<b>Accept Subject Alternative Name</b>	Click to check one specific field of digital signature to accept the peer with matching value. The field can be <b>IP Address</b> , <b>Domain</b> , or <b>E-mail Address</b> . The box under the Type will appear according to the type you select and ask you to fill in corresponding setting.
<b>Accept Subject Name</b>	Click to check the specific fields of digital signature to accept the peer with matching value. The field includes <b>Country (C)</b> , <b>State (ST)</b> , <b>Location (L)</b> , <b>Organization (O)</b> , <b>Organization Unit (OU)</b> , <b>Common Name (CN)</b> , and <b>Email (E)</b> .

After finishing all the settings here, please click **OK** to save the configuration.

## 4.12.5 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profile, so that users can be authenticated to dial-in via VPN connection. You may set parameters including specified connection peer ID, connection type (VPN connection - including PPTP, IPsec Tunnel, and L2TP by itself or over IPsec) and corresponding security methods, etc.

The router provides 32 access accounts for dial-in users. Besides, you can extend the user accounts to the RADIUS server through the built-in RADIUS client function. The following figure shows the summary table.

VPN and Remote Access >> Remote Dial-in User

Available settings are explained as follows:

Item	Description
<b>User account and Authentication</b>	<p><b>Enable this account</b> - Check the box to enable this function.</p> <p><b>Idle Timeout</b>- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds.</p>
<b>Allowed Dial-In Type</b>	<p><b>PPTP</b> - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</p> <p><b>IPSec Tunnel</b> - Allow the remote dial-in user to make an IPSec VPN connection through Internet.</p> <p><b>L2TP with IPSec Policy</b> - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p> <ul style="list-style-type: none"> <li>● <b>None</b> - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>● <b>Nice to Have</b> - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.</li> <li>● <b>Must</b> -Specify the IPSec policy to be definitely</li> </ul>

	<p>applied on the L2TP connection.</p> <p><b>SSL Tunnel</b> – Allow the remote dial-in user to make an SSL VPN connection through Internet.</p> <p><b>Specify Remote Node</b> -You can specify the IP address of the remote dial-in user, or peer ID (used in IKE aggressive mode).</p> <p>Uncheck the checkbox means the connection type you select above will apply the authentication methods and security methods in the <b>general settings</b>.</p> <p><b>Netbios Naming Packet</b> -</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.</li> <li>● <b>Block</b> – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.</li> </ul> <p><b>Multicast via VPN</b> - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click this button to let multicast packets pass through the router.</li> <li>● <b>Block</b> – This is default setting. Click this button to let multicast packets be blocked by the router.</li> </ul> <p><b>User Name</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The length of the name/password is limited to 23 characters.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The length of the name/password is limited to 19 characters.</p> <p><b>Enable Mobile One-Time Passwords (mOTP)</b> - Check this box to make the authentication with mOTP function.</p> <p><b>PIN Code</b> – Type the code for authentication (e.g., 1234).</p> <p><b>Secret</b> – Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).</p>
<b>Subnet</b>	<p>Chose one of the subnet selections for such VPN profile.</p> <p><b>Assign Static IP Address</b> – Please type a static IP address for the subnet you specified.</p>
<b>IKE Authentication Method</b>	<p>This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <p><b>Pre-Shared Key</b> - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</p> <p><b>Digital Signature (X.509)</b> – Check the box of Digital Signature to invoke this function and Select one predefined Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer</b></p>

	<b>Identity.</b>
<b>IPSec Security Method</b>	<p>This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node. Check the Medium, DES, 3DES or AES box as the security method.</p> <p><b>Medium-Authentication Header (AH)</b> means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it.</p> <p><b>High-Encapsulating Security Payload (ESP)</b> means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</p> <p><b>Local ID (Optional)</b>- Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p>

After finishing all the settings here, please click **OK** to save the configuration.

#### 4.12.6 LAN to LAN

Here you can manage LAN-to-LAN connections by maintaining a table of connection profiles. You may set parameters including specified connection direction (dial-in or dial-out), connection peer ID, connection type (VPN connection - including PPTP, IPSec Tunnel, and L2TP by itself or over IPSec) and corresponding security methods, etc.

The router supports up to 32 VPN tunnels simultaneously. The following figure shows the summary table.

VPN and Remote Access >> Remote Dial-in User

Available settings are explained as follows:

Item	Description
<b>Set to Factory Default</b>	Click to clear all indexes.

<b>Name</b>	Indicate the name of the LAN-to-LAN profile. The symbol ??? represents that the profile is empty.
<b>Active</b>	V – means the profile has been enabled. X – means the profile has not been enabled.
<b>Status</b>	Online – means such LAN to LAN profile is in use. Offline – means such LAN to LAN profile isn't in use even if the profile has been enabled.

To edit each profile:

1. Click each index to edit each profile and you will get the following page. Each LAN-to-LAN profile includes 4 subgroups. If the fields gray out, it means you may leave it untouched. The following explanations will guide you to fill all the necessary fields.

For the web page is too long, we divide the page into several sections for explanation.

#### VPN and Remote Access >> LAN to LAN

	Index(1-15) in <b>Schedule</b> Setup: <input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>

Available settings are explained as follows:

Item	Description
<b>Common Settings</b>	<b>Profile Name</b> – Specify a name for the profile of the LAN-to-LAN connection. <b>Enable this profile</b> - Check here to activate this profile. <b>Netbios Naming Packet</b> <ul style="list-style-type: none"> <li>● <b>Pass</b> – click it to have an inquiry for data transmission between the hosts located on both sides of VPN</li> </ul>

	<p>Tunnel while connecting.</p> <ul style="list-style-type: none"> <li>● <b>Block</b> – When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.</li> </ul> <p><b>Multicast via VPN</b> - Some programs might send multicast packets via VPN connection.</p> <ul style="list-style-type: none"> <li>● <b>Pass</b> – Click this button to let multicast packets pass through the router.</li> <li>● <b>Block</b> – This is default setting. Click this button to let multicast packets be blocked by the router.</li> </ul> <p><b>Call Direction</b> - Specify the allowed call direction of this LAN-to-LAN profile.</p> <ul style="list-style-type: none"> <li>● <b>Both</b>:-initiator/responder</li> <li>● <b>Dial-Out</b>- initiator only</li> <li>● <b>Dial-In</b>- responder only.</li> </ul> <p><b>Always On</b>-Check to enable router always keep VPN connection.</p> <p><b>Idle Timeout</b>: The default value is 300 seconds. If the connection has been idled over the value, the router will drop the connection.</p> <p><b>Enable PING to keep alive</b> - This function is to help the router to determine the status of IPSec VPN connection, especially useful in the case of abnormal VPN IPSec tunnel disruption. For details, please refer to the note below. Check to enable the transmission of PING packets to a specified IP address.</p> <p><b>Enable PING to keep alive</b> is used to handle abnormal IPSec VPN connection disruption. It will help to provide the state of a VPN connection for router's judgment of redial. Normally, if any one of VPN peers wants to disconnect the connection, it should follow a serial of packet exchange procedure to inform each other. However, if the remote peer disconnect without notice, Vigor router will by no where to know this situation. To resolve this dilemma, by continuously sending PING packets to the remote host, the Vigor router can know the true existence of this VPN connection and react accordingly. This is independent of DPD (dead peer detection).</p> <p><b>PING to the IP</b> - Enter the IP address of the remote host that located at the other-end of the VPN tunnel.</p>
<b>Dial-Out Settings</b>	<p><b>Type of Server I am calling - PPTP</b> - Build a PPTP VPN connection to the server through the Internet. You should set the identity like User Name and Password below for the authentication of remote server.</p> <p><b>IPSec Tunnel</b> - Build an IPSec VPN connection to the server through Internet.</p> <p><b>L2TP with IPSec Policy</b> - Build a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPSec. Select from below:</p>

	<ul style="list-style-type: none"> <li>● <b>None:</b> Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>● <b>Nice to Have:</b> Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-out VPN connection becomes one pure L2TP connection.</li> <li>● <b>Must:</b> Specify the IPSec policy to be definitely applied on the L2TP connection.</li> </ul> <p><b>User Name</b> - This field is applicable when you select, PPTP or L2TP with or without IPSec policy above. The length of the name is limited to 49 characters.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The length of the password is limited to 15 characters.</p> <p><b>PPP Authentication</b> - This field is applicable when you select, PPTP or L2TP with or without IPSec policy above. PAP/CHAP/MS-CHAP/MS-CHAPv2 is the most common selection due to wild compatibility.</p> <p><b>VJ compression</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. VJ Compression is used for TCP/IP protocol header compression. Normally set to <b>Yes</b> to improve bandwidth utilization.</p> <p><b>IKE Authentication Method</b> - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy.</p> <ul style="list-style-type: none"> <li>● <b>Pre-Shared Key</b> - Input 1-63 characters as pre-shared key.</li> <li>● <b>Digital Signature (X.509)</b> - Select one predefined Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b>.</li> </ul> <p><b>Peer ID</b> - Select one of the predefined Profiles set in <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b>.</p> <p><b>Local ID</b> – Specify a local ID (<b>Alternative Subject Name First</b> or <b>Subject Name First</b>) to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.</p> <p><b>IPSec Security Method</b> - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy.</p> <ul style="list-style-type: none"> <li>● <b>Medium AH (Authentication Header)</b> means data will be authenticated, but not be encrypted. By default, this option is active.</li> <li>● <b>High (ESP-Encapsulating Security Payload)</b> means payload (data) will be encrypted and authenticated. Select from below: <ul style="list-style-type: none"> <li>■ <b>DES without Authentication</b> -Use DES encryption algorithm and not apply any authentication scheme.</li> <li>■ <b>DES with Authentication</b>-Use DES encryption algorithm and apply MD5 or SHA-1</li> </ul> </li> </ul>
--	---

authentication algorithm.

- **3DES without Authentication**-Use triple DES encryption algorithm and not apply any authentication scheme.
- **3DES with Authentication**-Use triple DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.
- **AES without Authentication**-Use AES encryption algorithm and not apply any authentication scheme.
- **AES with Authentication**-Use AES encryption algorithm and apply MD5 or SHA-1 authentication algorithm.

**Advanced** - Specify mode, proposal and key life of each IKE phase, Gateway, etc.

The window of advance setup is shown as below:

**IKE advanced settings**

IKE phase 1 mode: ☒ Main mode ☐ Aggressive mode

IKE phase 1 proposal: Auto

IKE phase 2 proposal: HMAC\_SHA1/HMAC\_MD5

IKE phase 1 key lifetime: 28800 (900 - 86400)

IKE phase 2 key lifetime: 3600 (600 - 86400)

Perfect Forward Secret: ☒ Disable ☐ Enable

Local ID:

OK Close

Note: If you select 'Auto' in IKE phase 1 proposal, the router will send the following proposals to negotiate with the remote site. The proposals include: DES\_(MD5|SHA)\_G1, 3DES\_MD5\_G1, 3DES\_MD5\_G2, 3DES\_(MD5|SHA)\_G5, AES128\_MD5\_(G2|G5), AES256\_SHA\_(G2|G5), AES256\_SHA\_G14

**IKE phase 1 mode** -Select from **Main** mode and **Aggressive** mode. The ultimate outcome is to exchange security proposals to create a protected secure channel. **Main** mode is more secure than **Aggressive** mode since more exchanges are done in a secure channel to set up the IPSec session. However, the **Aggressive** mode is faster. The default value in Vigor router is Main mode.

- **IKE phase 1 proposal**-To propose the local available authentication schemes and encryption algorithms to the VPN peers, and get its feedback to find a match. Two combinations are available for Aggressive mode and nine for **Main** mode. We suggest you select the combination that covers the most schemes.
- **IKE phase 2 proposal**-To propose the local available algorithms to the VPN peers, and get its feedback to find a match. Three combinations are available for both modes. We suggest you select the combination that covers the most algorithms.
- **IKE phase 1 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 28800 seconds. You may specify a value in between 900 and 86400 seconds.
- **IKE phase 2 key lifetime**-For security reason, the lifetime of key should be defined. The default value is 3600 seconds. You may specify a value in between 600 and 86400 seconds.
- **Perfect Forward Secret (PFS)**-The IKE Phase 1 key will be reused to avoid the computation complexity in

	<p>phase 2. The default value is inactive this function.</p> <ul style="list-style-type: none"> <li>● <b>Local ID-In Aggressive</b> mode, Local ID is on behalf of the IP address while identity authenticating with remote VPN server. The length of the ID is limited to 47 characters.</li> </ul> <p><b>Index(1-15)</b> - Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in <b>Applications &gt;&gt; Schedule</b> setup. The default setting of this field is blank and the function will always work.</p>

Available settings are explained as follows:

Item	Description
<b>Dial-In Settings</b>	<p><b>Allowed Dial-In Type</b> - Determine the dial-in connection with different types.</p> <ul style="list-style-type: none"> <li>● <b>PPTP</b> - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below.</li> <li>● <b>IPSec Tunnel</b>- Allow the remote dial-in user to trigger an IPSec VPN connection through Internet.</li> <li>● <b>L2TP with IPSec Policy</b> - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with</li> </ul>

	<p>IPSec. Select from below:</p> <ul style="list-style-type: none"> <li>■ <b>None</b> - Do not apply the IPSec policy. Accordingly, the VPN connection employed the L2TP without IPSec policy can be viewed as one pure L2TP connection.</li> <li>■ <b>Nice to Have</b> - Apply the IPSec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection.</li> <li>■ <b>Must</b> - Specify the IPSec policy to be definitely applied on the L2TP connection.</li> </ul> <p><b>Specify Remote VPN Gateway</b> - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side.</p> <p>If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings.</p> <p><b>User Name</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The length of the named is limited to 11 characters.</p> <p><b>Password</b> - This field is applicable when you select PPTP or L2TP with or without IPSec policy above. The length of the password is limited to 11 characters.</p> <p><b>VJ Compression</b> - VJ Compression is used for TCP/IP protocol header compression. This field is applicable when you select PPTP or L2TP with or without IPSec policy above.</p> <p><b>IKE Authentication Method</b> - This group of fields is applicable for IPSec Tunnels and L2TP with IPSec Policy when you specify the IP address of the remote node. The only exception is Digital Signature (X.509) can be set when you select IPSec tunnel either with or without specify the IP address of the remote node.</p> <ul style="list-style-type: none"> <li>● <b>Pre-Shared Key</b> - Check the box of Pre-Shared Key to invoke this function and type in the required characters (1-63) as the pre-shared key.</li> <li>● <b>Digital Signature (X.509)</b> - Check the box of Digital Signature to invoke this function and select one predefined Profiles set in the <b>VPN and Remote Access &gt;&gt;IPSec Peer Identity</b>. <ul style="list-style-type: none"> <li>■ <b>Local ID</b> - Specify which one will be inspected first.</li> <li>■ <b>Alternative Subject Name First</b> - The alternative subject name (configured in <b>Certificate Management&gt;&gt;Local Certificate</b>) will be inspected first.</li> <li>■ <b>Subject Name First</b> - The subject name (configured in <b>Certificate Management&gt;&gt;Local Certificate</b>) will be</li> </ul> </li> </ul>
--	---

	<p>inspected first.</p> <p><b>IPSec Security Method</b> - This group of fields is a must for IPSec Tunnels and L2TP with IPSec Policy when you specify the remote node.</p> <ul style="list-style-type: none"> <li>● <b>Medium-</b> Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active.</li> <li>● <b>High-</b> Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.</li> </ul>
<b>TCP/IP Network Settings</b>	<p><b>My WAN IP</b> –This field is only applicable when you select PPTP or L2TP with or without IPSec policy above. The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p><b>Remote Gateway IP</b> - This field is only applicable when you select PPTP or L2TP with or without IPSec policy above. The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP.</p> <p><b>Remote Network IP/ Remote Network Mask</b> - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPSec, this is the destination clients IDs of phase 2 quick mode.</p> <p><b>Local Network IP / Local Network Mask</b> - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required.</p> <p><b>More</b> - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.</p>

**RIP Direction** - The option specifies the direction of RIP (Routing Information Protocol) packets. You can enable/disable one of direction here. Herein, we provide four options: TX/RX Both, TX Only, RX Only, and Disable.

**From first subnet to remote network, you have to do** - If the remote network only allows you to dial in with single IP, please choose **NAT**, otherwise choose **Route**.

**Change default route to this VPN tunnel** - Check this box to change the default route with this VPN tunnel.

2. After finishing all the settings here, please click **OK** to save the configuration.

## 4.12.7 Connection Management

You can find the summary table of all VPN connections. You may disconnect any VPN connection by clicking **Drop** button. You may also aggressively Dial-out by using Dial-out Tool and clicking **Dial** button.

VPN and Remote Access >> Connection Management

Dial-out Tool

Refresh Seconds : 10

VPN Connection Status

Current Page: 1 Page No.

VPN	Type	Remote IP	Virtual Network	Tx Pkts	Tx Rate(Bps)	Rx Pkts	Rx Rate(Bps)	UpTime
xxxxxxxx : Data is encrypted.								
xxxxxxxx : Data isn't encrypted.								

Available settings are explained as follows:

Item	Description
<b>Dial-out Tool</b>	<p>This filed displays the profile configured in LAN-to-LAN (with Index number and VPN Server IP address).</p> <p><b>Dial</b> - Click this button to execute dial out function.</p> <p><b>Refresh Seconds</b> - Choose the time for refresh the dial information among 5, 10, and 30.</p> <p><b>Refresh</b> - Click this button to refresh the whole connection status.</p>

## 4.13 Certificate Management

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

Any entity wants to utilize digital certificates should first request a certificate issued by a CA server. It should also retrieve certificates of other trusted CA servers so it can authenticate the peer with certificates issued by those trusted CA servers.

Here you can manage generate and manage the local digital certificates, and set trusted CA certificates. Remember to adjust the time of Vigor router before using the certificate so that you can get the correct valid period of certificate.

Below shows the menu items for Certificate Management.

-----END CERTIFICATE REQUEST-----

```

## IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as “Local Certificate”. If you have already gotten a certificate from a third party, you may import it directly.

**Import X509 Local Certificate**

<p>Select a local certificate file.</p> <p><input type="button" value="Select"/></p> <p>Click <a href="#">Import</a> to upload the local certificate.</p> <p><input type="button" value="Import"/> <input type="button" value="Cancel"/></p>
--

**REFRESH**

Click this button to refresh the information listed below.

**View**

Click this button to view the detailed settings for certificate request.

The screenshot shows a web browser window titled 'Certificate Signing Request Information - 楓樹瀏覽器'. The address bar shows '192.168.1.1/doc/XLoCfVi.htm'. The main content area displays a table titled 'Certificate Signing Request Information' with the following details:

Name :	Local
Issuer :	<script>reorder_subject('');</script>
Subject :	<script>reorder_subject('/C=TW/ST=H S/L=HS/O=DrayTek/CN=DT/emailAddress
Subject Alternative Name :	IP:192.168.1.23
Valid From :	
Valid To :	

Below the table is a 'Close' button.

**Note:** You have to copy the certificate request information from above window. Next, access your CA server and enter the page of certificate request, copy the information into it and submit a request. A new certificate will be issued to you by the CA server. You can save it.

**Delete**

Click this button to remove the selected certificate.

**4.13.2 Trusted CA Certificate**

Trusted CA certificate lists three sets of trusted CA certificate. In addition, you can build a RootCA certificate if required.

When the local client and remote client are required to make certificate authentication (e.g., IPsec X.509) for data passing through SSL tunnel and avoiding the attack of MITM, a trusted root certificate authority (Root CA) will be used to authenticate the digital certificates offered by both ends.

However, the procedure of applying digital certificate from a trusted root certificate authority is complicated and time-consuming. Therefore, Vigor router offers a mechanism which allows you to generate root CA to save time and provide convenience for general user. Later, such root CA generated by DrayTek server can perform the issuing of local certificate.

**Note:** Root CA can be deleted but not edited.

## X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify	
Trusted CA-1	---	---	View	Delete
Trusted CA-2	---	---	View	Delete
Trusted CA-3	---	---	View	Delete

IMPORT

REFRESH

## Importing a Trusted CA

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window. Use **Select** to find out the saved text file. Then click **Import**. The one you imported will be listed on the Trusted CA Certificate window. Then click **Import** to use the pre-saved file.

## Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

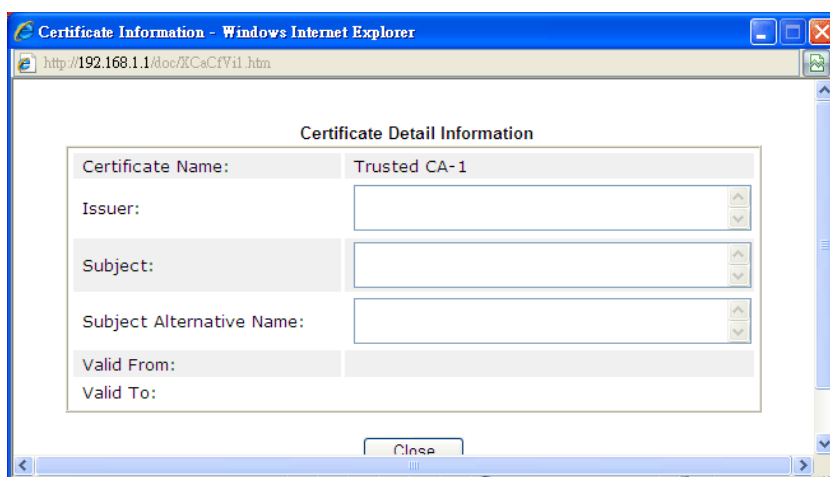

Select

Click **Import** to upload the certification.

Import

Cancel

For viewing each trusted CA certificate, click **View** to open the certificate detail information window. If you want to delete a CA certificate, choose the one and click **Delete** to remove all the certificate information.

### 4.13.3 Certificate Backup

Local certificate and Trusted CA certificate for this router can be saved within one file. Please click **Backup** on the following screen to save them. If you want to set encryption password for these certificates, please type characters in both fields of **Encrypt password** and **Retype password**.

Also, you can use **Restore** to retrieve these two settings to the router whenever you want.

Certificate Management >> Certificate Backup

#### Certificate Backup / Restoration

##### Backup

Encrypt password:

Confirm password:

Click  to download certificates to your local PC as a file.

##### Restoration

Select a backup file to restore.

Decrypt password:

Click  to upload the file.

## 4.14 VoIP

**Note:** This function is used for “V” models.

Voice over IP network (VoIP) enables you to use your broadband Internet connection to make toll quality voice calls over the Internet.

There are many different call signaling protocols, methods by which VoIP devices can talk to each other. The most popular protocols are SIP, MGCP, Megaco and H.323. These protocols are not all compatible with each other (except via a soft-switch server).

The Vigor V models support the SIP protocol as this is an ideal and convenient deployment for the ITSP (Internet Telephony Service Provider) and softphone and is widely supported. SIP is an end-to-end, signaling protocol that establishes user presence and mobility in VoIP structure. Every one who wants to talk using his/her SIP Uniform Resource Identifier, “SIP Address”. The standard format of SIP URI is

**sip: user:password @ host: port**

Some fields may be optional in different use. In general, “host” refers to a domain. The “userinfo” includes the user field, the password field and the @ sign following them. This is very similar to a URL so some may call it “SIP URL”. SIP supports peer-to-peer direct calling and also calling via a SIP proxy server (a role similar to the gatekeeper in H.323 networks), while the MGCP protocol uses client-server architecture, the calling scenario being very similar to the current PSTN network.

After a call is setup, the voice streams transmit via RTP (Real-Time Transport Protocol). Different codecs (methods to compress and encode the voice) can be embedded into RTP packets. Vigor V models provide various codecs, including G.711 A/μ-law, G.723, G.726 and G.729 A & B. Each codec uses a different bandwidth and hence provides different levels of voice quality. The more bandwidth a codec uses the better the voice quality, however the codec used must be appropriate for your Internet bandwidth.

Usually there will be two types of calling scenario, as illustrated below:

- **Calling via SIP Servers**

First, the Vigor V models of yours will have to register to a SIP Registrar by sending registration messages to validate. Then, both parties’ SIP proxies will forward the sequence of messages to caller to establish the session.

If you both register to the same SIP Registrar, then it will be illustrated as below:

The major benefit of this mode is that you don't have to memorize your friend's IP address, which might change very frequently if it's dynamic. Instead of that, you will only have to use **dial plan** or directly dial your friend's **account name** if you are with the same SIP Registrar.

- **Peer-to-Peer**

Before calling, you have to know your friend's IP Address. The Vigor VoIP Routers will build connection between each other.

- Our Vigor V models firstly apply efficient codecs designed to make the best use of available bandwidth, but Vigor V models also equip with automatic QoS assurance. QoS Assurance assists to assign high priority to voice traffic via Internet. You will always have the required inbound and outbound bandwidth that is prioritized exclusively for Voice traffic over Internet but you just get your data a little slower and it is tolerable for data traffic.

## 4.14.1 DialPlan

This page allows you to set phone book, digit map, call barring, regional settings and PSTN setup for the VoIP function. Click the links on this page to access into next pages for detailed settings.

VoIP >> DialPlan Setup

### DialPlan Configuration

<p><a href="#">Phone Book</a></p> <p><a href="#">Digit Map</a></p> <p><a href="#">Call Barring</a></p> <p><a href="#">Regional</a></p> <p><a href="#">PSTN Setup</a></p>
--

### Secure Phone configuration

<p><input checked="" type="checkbox"/> Enable Secure Phone (ZRTP+SRTP)</p> <p><input checked="" type="checkbox"/> Enable SAS Voice Prompt</p>
---

OK

Available settings are explained as follows:

Item	Description
Enable Secure Phone	It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.
Enable SAS Voice Prompt	If it is enabled, SAS prompt will be heard for both ends every time. If it is disabled, no SAS prompt will be heard any more.

## Application for Secure Phone

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** and **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will send SAS voice prompt to A and vigor router B will send the SAS voice prompt to B.
2. Then the RTP traffic is secured until the call ends.
3. If vigor router A wants to call vigor router B again next time, both A and B will not hear any voice prompt again even checking **Enable SAS Voice Prompt** on web UI. It means only the first call between them will have voice prompt.

Enable SAS Voice Prompt, for ex: if vigor router A calls vigor router B with checking **Enable Secure Phone** but not **Enable SAS Voice Prompt**, then:

1. After the connection established, vigor router A will **NOT** send SAS voice prompt to vigor router A and vigor router B will NOT send the SAS voice prompt to vigor router B.
2. Even no voice prompt, but the RTP traffic is still secured until the call ends.

**Note:** If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

## Phone Book

In this section, you can set your VoIP contacts in the “phonebook”. It can help you to make calls quickly and easily by using “speed-dial” **Phone Number**. There are total 60 index entries in the phonebook for you to store all your friends and family members’ SIP addresses. **Loop through** and **Backup Phone Number** will be displayed if you are using Vigor2132V series for setting the phone book.

VoIP >> DialPlan Setup

### Phone Book

### Phone Book Index No. 1

☒ Enable

Phone Number

Display Name

SIP URL

Dial Out Account

Loop through

Backup Phone Number

Secure Phone

@

Default

None

None

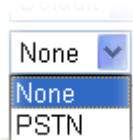

OK

Clear

Cancel

Available settings are explained as follows:

Item	Description
Enable	Click this to enable this entry.

<b>Phone Number</b>	The speed-dial number of this index. This can be any number you choose, using digits <b>0-9</b> and <b>*</b> .
<b>Display Name</b>	The Caller-ID that you want to be displayed on your friend's screen. This let your friend can easily know who's calling without memorizing lots of SIP URL Address.
<b>SIP URL</b>	Enter your friend's SIP Address.
<b>Dial Out Account</b>	Choose one of the SIP accounts for this profile to dial out. It is useful for both sides (caller and callee) that registered to different SIP Registrar servers. If caller and callee do not use the same SIP server, sometimes, the VoIP phone call connection may not succeed. By using the specified dial out account, the successful connection can be assured.
<b>Loop through</b>	Choose PSTN to enable loop through function. 
<b>Backup Phone Number</b>	When the VoIP phone obstructs or the Internet breaks down for some reasons, the backup phone will be dialed out to replace the VoIP phone number. At this time, the phone call will be changed from VoIP phone into PSTN call according to the loop through direction chosen. Note that, during the phone switch, the blare of phone will appear for a short time. And when the VoIP phone is switched into the PSTN phone, the telecom co. might charge you for the connection fee. Please type in backup phone number for this VoIP phone setting.
<b>Secure Phone</b>	<b>ZRTP+SRTP</b> - It allows users to have encrypted RTP stream with the peer side using the same protocol (ZRTP+SRTP). Check this box to have secure call.

After finishing all the settings here, please click **OK** to save the configuration.

**Note:** If the incoming or outgoing calls do not match any entry on the phonebook, the router will try to make the call "being protected". But, if the call ends up "unprotected"(e.g. peer side does not support ZRTP+SRTP), the router will not play out a warning message.

## Digit Map

For the convenience of user, this page allows users to edit prefix number for the SIP account with adding number, stripping number or replacing number. It is used to help user having a quick and easy way to dial out through VoIP interface.

**Note:**

1. The length for Min Len and Max Len fields should be between 0~25.
2. Wildcard '?' is supported.

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to invoke this setting.
<b>Match Prefix</b>	It is used to match with the number you dialed and may modified by the action (add, strip or replace) with the <b>OP Number</b> .
<b>Mode</b>	<p><b>None</b> - No action.</p> <p><b>Add</b> - When you choose this mode, the OP number will be added before the match prefix number for calling out through the specific route.</p> <p><b>Strip</b> - When you choose this mode, the partial or whole match prefix number will be deleted according to the OP number. Take the above picture (Prefix Table Setup web page) as an example, the OP number of 886 will be deleted completely for the match prefix number is set with 886.</p> <p><b>Replace</b> - When you choose this mode, the OP number will be replaced by the prefix number for calling out through the specific VoIP interface. Take the above picture (Prefix Table Setup web page) as an example, the prefix number of 03 will be replaced by 8863. For example: dial number of "031111111" will be changed to "8863111111" and sent to SIP server.</p>

	<div>Mode</div> <div> Replace ▼  None  Add  Strip  Replace </div>
<b>OP Number</b>	The front number you type here is the first part of the account number that you want to execute special function (according to the chosen mode) by using the prefix number.
<b>Min Len</b>	Set the minimal length of the dial number for applying the prefix number settings. Take the above picture (Prefix Table Setup web page) as an example, if the dial number is between 7 and 9, that number can apply the prefix number settings here.
<b>Max Len</b>	Set the maximum length of the dial number for applying the prefix number settings.
<b>Route</b>	Choose the one that you want to enable the prefix number settings from the saved SIP accounts. Please set up one SIP account first to make this interface available. This item will be changed according to the port settings configured in <b>VoIP&gt;&gt; Phone Settings</b> .
<b>Move UP /Move Down</b>	Click the link to move the selected entry up or down.

After finishing all the settings here, please click **OK** to save the configuration.

## Call Barring

Call barring is used to block phone calls coming from the one that is not welcomed.

Note: Wildcard '?' is supported.

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check it to enable this entry.
<b>Call Direction</b>	<p>Determine the direction for the phone call, IN – incoming call, OUT-outgoing call, IN &amp; OUT – both incoming and outgoing calls.</p> 
<b>Barring Type</b>	<p>Determine the type of the VoIP phone call, URI/URL or number.</p> 
<b>Specific URI/URL or Specific Number</b>	This field will be changed based on the type you selected for barring Type.
<b>Route</b>	<p><b>All</b> means all the phone calls will be blocked with such mechanism.</p> <p>Choose the</p>
<b>Index (1-15) in Schedule</b>	Enter the index of schedule profiles to control the call barring according to the preconfigured schedules. Refer to section <b>Applications&gt;&gt;Schedule</b> for detailed configuration.

Additionally, you can set advanced settings for call barring such as **Block Anonymous**, **Block Unknown Domain** or **Block IP Address**. Simply click the relational links to open the web page.

For **Block Anonymous** – this function can block the incoming calls without caller ID on the interface (Phone port) specified in the following window. Such control also can be done based on preconfigured schedules.

#### VoIP >> DialPlan Setup

##### Call Barring Block Anonymous

Route	<input type="checkbox"/> Phone1	<input type="checkbox"/> Phone2
Index(1-15) in <b>Schedule</b> Setup	<input type="text"/>	<input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>

**Note:**Block the incoming calls which do not have the caller ID.

For **Block Unknown Domain** – this function can block incoming calls (through Phone port) from unrecognized domain that is not specified in SIP accounts. Such control also can be done based on preconfigured schedules.

#### VoIP >> DialPlan Setup

##### Call Barring Block Unknown Domain

Route	<input type="checkbox"/> Phone1	<input type="checkbox"/> Phone2
Index(1-15) in <b>Schedule</b> Setup	<input type="text"/>	<input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>

**Note:**If the domain of the incoming call is different from the domain found in SIP accounts, the call should be blocked.

For **Block IP Address** – this function can block incoming calls (through Phone port) coming from IP address. Such control also can be done based on preconfigured schedules.

#### VoIP >> DialPlan Setup

##### Call Barring Block IP Address

Route	<input type="checkbox"/> Phone1	<input type="checkbox"/> Phone2
Index(1-15) in <b>Schedule</b> Setup	<input type="text"/>	<input type="text"/> , <input type="text"/> , <input type="text"/> , <input type="text"/>

**Note:**The incoming calls by means of IP dialing (e.g.#192\*168\*1\*1#) should be blocked.

## Regional

This page allows you to process incoming or outgoing phone calls by regional. Default values (common used in most areas) will be shown on this web page. You *can change* the number based on the region that the router is placed.

Available settings are explained as follows:

Item	Description
<b>Enable Regional</b>	Check this box to enable this function.
<b>Last Call Return [Miss]</b>	Sometimes, people might miss some phone calls. Please dial number typed in this field to know where the last phone call comes from and call back to that one.
<b>Last Call Return [In]</b>	You have finished an incoming phone call, however you want to call back again for some reason. Please dial number typed in this field to call back to that one.
<b>Last Call Return [Out]</b>	Dial the number typed in this field to call the previous outgoing phone call again.
<b>Call Forward [All][Act]</b>	Dial the number typed in this field to forward all the incoming calls to the specified place.
<b>Call Forward [Deact]</b>	Dial the number typed in this field to release the call forward function.
<b>Call Forward [Busy][Act]</b>	Dial the number typed in this field to forward all the incoming calls to the specified place while the phone is busy.
<b>Call Forward [No</b>	Dial the number typed in this field to forward all the incoming calls to the specified place while there is no

<b>Ans][Act]</b>	answer of the connected phone.
<b>Do Not Disturb [Act]</b>	Dial the number typed in this field to invoke the function of DND.
<b>Do Not Distrub [Deact]</b>	Dial the number typed in this field to release the DND function.
<b>Hide caller ID [Act]</b>	Dial the number typed in this field to make your phone number (ID) not displayed on the display panel of remote end.
<b>Hide caller ID [Deact]</b>	Dial the number typed in this field to release this function.
<b>Call Waiting [Act]</b>	Dial the number typed in this field to make all the incoming calls waiting for your answer.
<b>Call Waiting [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Anonymous[Act]</b>	Dial the number typed in this field to block all the incoming calls with unknown ID.
<b>Block Anonymous[Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Unknown Domain [Act]</b>	Dial the number typed in this field to block all the incoming calls from unknown domain.
<b>Block Unknown Domain [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block IP Calls [Act]</b>	Dial the number typed in this filed to block all the incoming calls from IP address.
<b>Block IP Calls [Deact]</b>	Dial the number typed in this field to release this function.
<b>Block Last Calls [Act]</b>	Dial the number typed in this field to block the last incoming phone call.

After finishing all the settings here, please click **OK** to save the configuration.

#### 4.14.2 SIP Accounts

In this section, you set up your own SIP settings. When you apply for an account, your SIP service provider will give you an **Account Name** or user name, **SIP Registrar**, **Proxy**, and **Domain name**. (The last three might be the same in some case). Then you can tell your folks your SIP Address as in **Account Name@ Domain name**

As Vigor VoIP Router is turned on, it will first register with Registrar using AuthorizationUser@Domain/Realm. After that, your call will be bypassed by SIP Proxy to the destination using AccountName@Domain/Realm as identity.

**Note:** Selection items for **Ring Port** will differ according to the router you have.

## SIP Accounts List

## NAT Traversal Setting

STUN Server:	<input type="text"/>
External IP:	<input type="text"/>
SIP PING Interval:	<input type="text" value="150"/> sec

OK

Available settings are explained as follows:

Item	Description
<b>Index</b>	Click this link to access into next page for setting SIP account.
<b>Profile</b>	Display the profile name of the account.
<b>Domain/Realm</b>	Display the domain name or IP address of the SIP registrar server.
<b>Proxy</b>	Display the domain name or IP address of the SIP proxy server.
<b>Account Name</b>	Display the account name of SIP address before @.
<b>Codec</b>	Display the codec type for the account.
<b>Ring Port</b>	Specify which port will ring when receiving a phone call.
<b>Status</b>	Show the status for the corresponding SIP account. <b>R</b> means such account is registered on SIP server successfully. <b>-</b> means the account is failed to register on SIP server.
<b>STUN Server</b>	Type in the IP address or domain of the STUN server.
<b>External IP</b>	Type in the gateway IP address.

<b>SIP PING interval</b>	The default value is 150 (sec). It is useful for a Nortel server NAT Traversal Support.

Packet Size	<input type="button" value="20ms"/>	
Voice Active Detector	<input type="button" value="Off"/>	

Available settings are explained as follows:

Item	Description
<b>Profile Name</b>	Assign a name for this profile for identifying. You can type similar name with the domain. For example, if the domain name is <i>draytel.org</i> , then you might set <i>draytel-1</i> in this field.
<b>Register via</b>	If you want to make VoIP call without register personal information, please choose <b>None</b> and check the box to achieve the goal. Some SIP server allows user to use VoIP function without registering. For such server, please check the box of <b>Call without Registration</b> . Choosing <b>Auto</b> is recommended. The system will select a proper way for your VoIP call.
<b>SIP Port</b>	Set the port number for sending/receiving SIP message for building a session. The default value is <b>5060</b> . Your peer must set the same value in his/her Registrar.
<b>Domain/Realm</b>	Set the domain name or IP address of the SIP Registrar

	server.
<b>Proxy</b>	Set domain name or IP address of SIP proxy server. By the time you can type <b>:port number</b> after the domain name to specify that port as the destination of data transmission (e.g., <b>nat.draytel.org:5065</b> )
<b>Act as Outbound Proxy</b>	Check this box to make the proxy acting as outbound proxy.
<b>Display Name</b>	The caller-ID that you want to be displayed on your friend's screen.
<b>Account Number/Name</b>	Enter your account name of SIP Address, e.g. every text before @.
<b>Authentication ID</b>	Check the box to invoke this function and enter the name or number used for SIP Authorization with SIP Registrar. If this setting value is the same as Account Name, it is not necessary for you to check the box and set any value in this field.
<b>Password</b>	The password provided to you when you registered with a SIP service.
<b>Expiry Time</b>	The time duration that your SIP Registrar server keeps your registration record. Before the time expires, the router will send another register request to SIP Registrar again.
<b>NAT Traversal Support</b>	<p>If the router (e.g., broadband router) you use connects to internet by other device, you have to set this function for your necessity.</p> <p>NAT Traversal Support </p> <p><b>None</b> – Disable this function.  <b>Stun</b> – Choose this option if there is Stun server provided for your router.  <b>Manual</b> – Choose this option if you want to specify an external IP address as the NAT transversal support.  <b>Nortel</b> – If the soft-switch that you use supports Nortel solution, you can choose this option.</p>
<b>Call Forwarding</b>	<p>There are four options for you to choose. <b>Disable</b> is to close call forwarding function. <b>Always</b> means all the incoming calls will be forwarded into SIP URL without any reason. <b>Busy</b> means the incoming calls will be forwarded into SIP URL only when the local system is busy. <b>No Answer</b> means if the incoming calls do not receive any response, they will be forwarded to the SIP URL by the time out.</p>

	 <p><b>SIP URL</b> – Type in the SIP URL (e.g., aaa@draytel.org or abc@iptel.org) as the site for call forwarded.</p> <p><b>Time Out</b> – Set the time out for the call forwarding. The default setting is 30 sec.</p>
<b>Ring Port</b>	Set Phone 1 and/or Phone 2 as the default ring port(s) for this SIP account.
<b>Ring Pattern</b>	<p>Choose a ring tone type for the VoIP phone call.</p> <p>Ring Pattern </p>
<b>Prefer Codec</b>	<p>Select one of five codecs as the default for your VoIP calls. The codec used for each call will be negotiated with the peer party before each session, and so may not be your default choice. The default codec is G.729A/B; it occupies little bandwidth while maintaining good voice quality.</p> <p>If your upstream speed is only 64Kbps, do not use G.711 codec. It is better for you to have at least 256Kbps upstream if you would like to use G.711.</p>  <p><b>Single Codec</b> – If the box is checked, only the selected Codec will be applied.</p>
<b>Packet Size</b>	<p>The amount of data contained in a single packet. The default value is 20 ms, which means the data packet will contain 20 ms voice information.</p> <p>Packet Size </p>
<b>Voice Active Detector</b>	This function can detect if the voice on both sides is active or not. If not, the router will do something to save the

	bandwidth for other using. Click On to invoke this function; click off to close the function.  Voice Active Detector <span>Off ▼</span> <div>Off</div> <div>On</div>

After finishing all the settings here, please click **OK** to save the configuration.

## Detailed Settings for Phone Port

Click the number link for Phone port, you can access into the following page for configuring Phone settings.

VoIP >> Phone Settings

**Phone1**

<b>Call Feature</b> <input type="checkbox"/> Hotline <input type="checkbox"/> Session Timer 90 sec <input type="checkbox"/> T.38 Fax Function Error Correction Mode REDUNDANCY <input type="checkbox"/> DND(Do Not Disturb) Mode Index(1-15) in <b>Schedule</b> Setup: [ ] , [ ] , [ ] , [ ] <b>Note:</b> Action and Idle Timeout settings will be ignored. Index(1-60) in <b>Phone Book</b> as Exception List: [ ] , [ ] , [ ] , [ ] , [ ] <input type="checkbox"/> CLIR (hide caller ID) <input checked="" type="checkbox"/> Call Waiting <input checked="" type="checkbox"/> Call Transfer	<b>Default SIP Account</b> <input type="checkbox"/> Play dial tone only when account registered
--	--

OK Cancel Advanced

Available settings are explained as follows:

Item	Description
Hotline	Check the box to enable it. Type in the SIP URL in the field for dialing automatically when you pick up the phone set.
Session Timer	Check the box to enable the function. In the limited time that you set in this field, if there is no response, the connecting call will be closed automatically.
T.38 Fax Function	Check the box to enable T.38 fax function. <b>Error Correction Mode</b> – choose a mode for error correction.
DND (Do Not Disturb) mode	Set a period of peace time without disturbing by VoIP phone call. During the period, the one who dial in will listen busy tone, yet the local user will not listen any ring tone. <b>Index (1-15) in Schedule</b> - Enter the index of schedule profiles to control when the phone will ring and when will not according to the preconfigured schedules. Refer to section <b>Application &gt;&gt;Schedule</b> for detailed configuration. <b>Index (1-60) in Phone Book</b> - Enter the index of phone book profiles. Refer to section <b>DialPlan – Phone Book</b> for detailed configuration.
CLIR (hide caller ID)	Check this box to hide the caller ID on the display panel of the phone set.
Call Waiting	Check this box to invoke this function. A notice sound will appear to tell the user new phone call is waiting for your

	response. Click hook flash to pick up the waiting phone call.
<b>Call Transfer</b>	Check this box to invoke this function. Click hook flash to initiate another phone call. When the phone call connection succeeds, hang up the phone. The other two sides can communicate, then.
<b>Default SIP Account</b>	<p>You can set SIP accounts (up to six groups) on SIP Account page. Use the drop down list to choose one of the profile names for the accounts as the default one for this phone setting.</p> <p><b>Play dial tone only when account registered</b> - Check this box to invoke the function.</p>

In addition, you can press the **Advanced** button to configure tone settings, volume gain, MISC and DTMF mode. **Advanced** setting is provided for fitting the telecommunication custom for the local area of the router installed. Wrong tone settings might cause inconvenience for users. To set the sound pattern of the phone set, simply choose a proper region to let the system find out the preset tone settings and caller ID type automatically. Or you can adjust tone settings manually if you choose User Defined. TOn1, TOff1, TOn2 and TOff2 mean the cadence of the tone pattern. TOn1 and TOn2 represent sound-on; TOff1 and TOff2 represent the sound-off.

VoIP >> Phone Settings

#### Advance Settings >> Phone 1

Tone Settings		Caller ID Type				
Region	User Defined	FSK_ETSI				
	Low Freq(Hz)	High Freq(Hz)	T on 1 (msec)	T off 1 (msec)	T on 2 (msec)	T off 2 (msec)
Dial tone	350	440	0	0	0	0
Ringing tone	400	450	400	200	400	2000

Interdigit Timeout (1 - 10 sec)	4

OK

Cancel

Available settings are explained as follows:

Item	Description
<b>Region</b>	Select the proper region which you are located. The common settings of <b>Caller ID Type</b> , <b>Dial tone</b> , <b>Ringing tone</b> , <b>Busy tone</b> and <b>Congestion tone</b> will be shown automatically on the page. If you cannot find out a suitable one, please choose <b>User Defined</b> and fill out the corresponding values for dial tone, ringing tone, busy tone,

	<p>congestion tone by yourself for VoIP phone.</p>  <p>Also, you can specify each field for your necessity. It is recommended for you to use the default settings for VoIP communication.</p>
<b>Volume Gain</b>	<p><b>Mic Gain (1-10)/Speaker Gain (1-10)</b> - Adjust the volume of microphone and speaker by entering number from 1- 10. The larger of the number, the louder the volume is.</p>
<b>MISC</b>	<p><b>Dial Tone Power Level</b> - This setting is used to adjust the loudness of the dial tone. The smaller the number is, the louder the dial tone is. It is recommended for you to use the default setting.</p> <p><b>Call Waiting Tone Power Level</b> - This setting is used to adjust the loudness of the call waiting tone. The smaller the number is, the louder the tone is. It is recommended for you to use the default setting.</p> <p><b>Interdigit Timeout</b> – Type a value in this field to specify time limit for interdigit.</p>
<b>DTMF</b>	<p><b>DTMF Mode</b> – There are four DTMF modes for you to choose.</p> <p>DTMF mode</p>  <ul style="list-style-type: none"> <li>● <b>InBand</b> - Choose this one then the Vigor will send the DTMF tone as audio directly when you press the keypad on the phone.</li> <li>● <b>OutBand</b> - Choose this one then the Vigor will capture the keypad number you pressed and transform</li> </ul>

	<p>it to digital form then send to the other side; the receiver will generate the tone according to the digital form it receive. This function is very useful when the network traffic congestion occurs and it still can remain the accuracy of DTMF tone.</p> <ul style="list-style-type: none"> <li>● <b>SIP INFO</b>- Choose this one then the Vigor will capture the DTMF tone and transfer it into SIP form. Then it will be sent to the remote end with SIP message.</li> </ul> <p><b>Payload Type (rfc2833)</b> - Type a number from 96 to 127, the default value was 101. This setting is available for the OutBand (RFC2833) mode.</p>

xxxxxxxx : VoIP is encrypted.  
xxxxxxxx : VoIP isn't encrypted.

Available settings are explained as follows:

Item	Description
<b>Refresh Seconds</b>	<p>Specify the interval of refresh time to obtain the latest VoIP calling information. The information will update immediately when the Refresh button is clicked.</p> <p>Refresh Seconds : <input type="text" value="10"/> <input type="button" value="Refresh"/></p> <p><input type="text" value="5"/> <input type="text" value="10"/> <input type="text" value="30"/></p>
<b>Port</b>	It shows current connection status for Phone(s) ports.
<b>Status</b>	<p>It shows the VoIP connection status.</p> <p><b>IDLE</b> - Indicates that the VoIP function is idle.</p>

	<b>HANG_UP</b> - Indicates that the connection is not established (busy tone). <b>CONNECTING</b> - Indicates that the user is calling out. <b>WAIT_ANS</b> - Indicates that a connection is launched and waiting for remote user's answer. <b>ALERTING</b> - Indicates that a call is coming. <b>ACTIVE</b> -Indicates that the VoIP connection is launched.
<b>Codec</b>	Indicates the voice codec employed by present channel.
<b>PeerID</b>	The present in-call or out-call peer ID (the format may be IP or Domain).
<b>Elapse(hh:mm:ss)</b>	The format is represented as hours:minutes:seconds.
<b>Tx Pkts</b>	Total number of transmitted voice packets during this connection session.
<b>Rx Pkts</b>	Total number of received voice packets during this connection session.
<b>Rx Losts</b>	Total number of lost packets during this connection session.
<b>Rx Jitter</b>	The jitter of received voice packets.
<b>In Calls</b>	Accumulation for the times of in call.
<b>Out Calls</b>	Accumulation for the times of out call.
<b>Miss Calls</b>	Accumulation for the times of missing call.
<b>Speaker Gain</b>	The volume of present call.
<b>Log</b>	Display logs of VoIP calls.

## 4.15 Wireless LAN(2.4GHz/5GHz)

This function is used for “n” and “ac” models.

### 4.15.1 Basic Concepts

Over recent years, the market for wireless communications has enjoyed tremendous growth. Wireless technology now reaches or is capable of reaching virtually every location on the surface of the earth. Hundreds of millions of people exchange information every day via wireless communication products. The Vigor “n” model, a.k.a. Vigor wireless router, is designed for maximum flexibility and efficiency of a small office/home. Any authorized staff can bring a built-in WLAN client PDA or notebook into a meeting room for conference without laying a clot of LAN cable or drilling holes everywhere. Wireless LAN enables high mobility so WLAN users can simultaneously access all LAN facilities just like on a wired LAN as well as Internet access.

Vigor2132 wireless router is a highly integrated wireless local area network (WLAN) for 5 GHz 802.11ac or 2.4/5 GHz 802.11n WLAN applications. It supports channel operations of 20/40 MHz at 2.4 GHz and 20/40/80 MHz at 5 GHz. Vigor2132 “ac” series router can support data rates up to 1.3 Gbps in 802.11ac 80 MHz channels. Vigor2132 “n” series router supports 802.11n up to 300 Mbps for 40 MHz channel operations.

**Note:** \* The actual data throughput will vary according to the network conditions and environmental factors, including volume of network traffic, network overhead and building materials.

In an Infrastructure Mode of wireless network, Vigor wireless router plays a role as an Access Point (AP) connecting to lots of wireless clients or Stations (STA). All the STAs will share the same Internet connection via Vigor wireless router. The **General Settings** will set up the information of this wireless network, including its SSID as identification, located channel etc.

## Multiple SSIDs

Vigor router supports four SSID settings for wireless connections. Each SSID can be defined with different name and download/upload rate for selecting by stations connected to the router wirelessly.

## Security Overview

**Real-time Hardware Encryption:** Vigor Router is equipped with a hardware AES encryption engine so it can apply the highest protection to your data without influencing user experience.

**Complete Security Standard Selection:** To ensure the security and privacy of your wireless communication, we provide several prevailing standards on market.

WEP (Wired Equivalent Privacy) is a legacy method to encrypt each frame transmitted via radio using either a 64-bit or 128-bit key. Usually access point will preset a set of four keys and it will communicate with each station using only one out of the four keys.

WPA (Wi-Fi Protected Access), the most dominating security mechanism in industry, is separated into two categories: WPA-personal or called WPA Pre-Share Key (WPA/PSK), and WPA-Enterprise or called WPA/802.1x.

In WPA-Personal, a pre-defined key is used for encryption during data transmission. WPA applies Temporal Key Integrity Protocol (TKIP) for data encryption while WPA2 applies AES. The WPA-Enterprise combines not only encryption but also authentication.

Since WEP has been proved vulnerable, you may consider using WPA for the most secure connection. You should select the appropriate security mechanism according to your needs. No matter which security suite you select, they all will enhance the over-the-air data protection and /or privacy on your wireless network. The Vigor wireless router is very flexible and can support multiple secure connections with both WEP and WPA at the same time.

**Separate the Wireless and the Wired LAN- WLAN Isolation** enables you to isolate your wireless LAN from wired LAN for either quarantine or limit access reasons. To isolate means neither of the parties can access each other. To elaborate an example for business use, you

may set up a wireless LAN for visitors only so they can connect to Internet without hassle of the confidential information leakage. For a more flexible deployment, you may add filters of MAC addresses to isolate users' access from wired LAN.

**Manage Wireless Stations - Station List** will display all the station in your wireless network and the status of their connection.

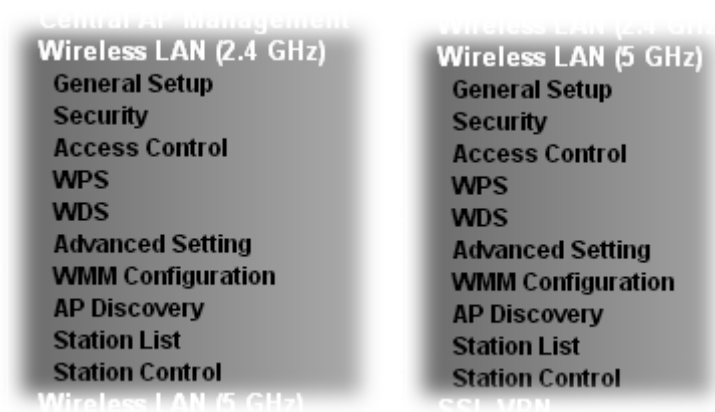

### **DFS Restrictions (for Vigor2132Vac only)**

Some of 5GHz channels are DFS channels which are governed radars. Without passing DFS certificate test, we can not open those DFS channels in Vigor router. We are working on DFS certification in Europe and open those channels by releasing new firmware once we receive DFS certification. According to DFS certificate in Europe, we will open channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, and 136.

At present, we will not open DFS channels in the USA because we do not have plan for DFS certification in the USA. Channels 52, 56, 60, 64, 100, 104, 108, 112, 116, 120, 124, 128, 132, and 136 will be restricted in the USA.

In some countries, there are restrictions on DFS channels as well. We will implement country code to restrict uncertified channels.

Below shows the menu items for Wireless LAN (2.4Ghz) and Wireless LAN(5GHz):

The following sections explain setting for wireless LAN. Here we take menu items under Wireless LAN (2.4 GHz) as the examples. The differences for the settings between 2.4 GHz and 5 GHz will be pointed out.

## 4.15.2 General Setup

By clicking the **General Settings**, a new web page will appear so that you could configure the SSID and the wireless channel. Please refer to the following figure for more information.

### Wireless LAN >> General Setup

#### General Setting ( IEEE 802.11 )

☐ Enable Wireless LAN

Mode : Mixed(11b+11g+11n)

Channel: Channel 6, 2437MHz

	Enable	Hide SSID	SSID	Isolate Member	Isolate VPN
1	<input type="checkbox"/>	<input type="checkbox"/>	DrayTek	<input type="checkbox"/>	<input type="checkbox"/>
2	<input type="checkbox"/>	<input type="checkbox"/>	DrayTek_Guest	<input type="checkbox"/>	<input type="checkbox"/>
3	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>
4	<input type="checkbox"/>	<input type="checkbox"/>		<input type="checkbox"/>	<input type="checkbox"/>

**Note:**  
Enabling the Isolate Member configuration will forbid the wireless clients associated to the same SSID from connecting to each other.

The isolate VPN configuration will isolate the wireless traffic from VPN connections and thus, wireless clients will not be able to access the VPN network under this setting.

Rate Control
 

	Enable	Upload	Download
SSID 1	<input type="checkbox"/>	<span>30000</span> kbps	<span>30000</span> kbps
SSID 2	<input type="checkbox"/>	<span>30000</span> kbps	<span>30000</span> kbps
SSID 3	<input type="checkbox"/>	<span>30000</span> kbps	<span>30000</span> kbps
SSID 4	<input type="checkbox"/>	<span>30000</span> kbps	<span>30000</span> kbps

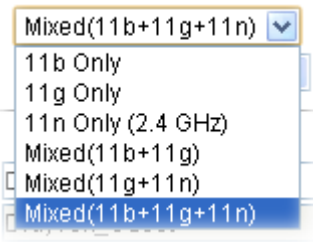

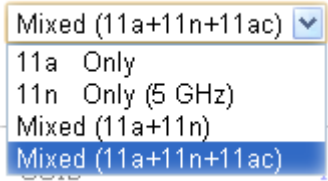

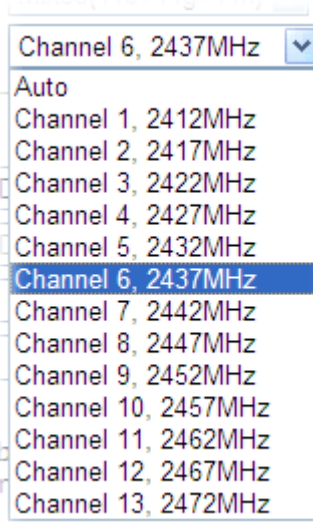

**Note:**  
Configurable upload and download rates are from 100 to 50,000(kbps).

Associated **Schedule** Profiles: , , ,

**Note:**  
Only schedule profiles that have the action "Force Down" are applied to the WLAN, all other actions are ignored. Valid settings are profile indexes 1 to 15.

Available settings are explained as follows:

Item	Description
<b>Enable Wireless LAN</b>	Check the box to enable wireless function.
<b>Mode</b>	Mode selections will vary according to the router you have. For 2.4GHz: At present, the router can connect to 11g Only, 11n Only (2.4 GHz), Mixed (11b+11g), Mixed (11g+11n), and Mixed (11b+11g+11n) stations simultaneously. Simply choose Mixed (11b+11g+11n) mode.

	 <p>For 5 GHz: At present, the router can connect to 11a Only, 11n Only(5 GHz), Mixed (11a+11n), and Mixed (11a+11n+11ac) stations simultaneously. Simply choose Mixed (11a+11n+11ac) mode.</p>  <p>In which, 802.11b/g operates on 2.4GHz band, 802.11a operates on 5GHz band, 802.11n operates on either 2.4GHz or 5GHz band, and 802.11ac operates on 5GHz band only.</p>
<b>Channel</b>	<p>Means the channel of frequency of the wireless LAN. The default channel for 802.11n and 802.11ac are different. You may switch channel if the selected channel is under serious interference. If you have no idea of choosing the frequency, please select <b>Auto</b> to let system determine for you.</p> <p>Below shows an example of channel selection for 802.11n (2.4GHz).</p> 
<b>Hide SSID</b>	<p>Check it to prevent from wireless sniffing and make it harder for unauthorized clients or STAs to join your wireless LAN. Depending on the wireless utility, the user may only see the information except SSID or just cannot see any thing about Vigor wireless router while site surveying. The system allows you to set four sets of SSID for different usage. In default, the first set of SSID will be</p>

	enabled. You can hide it for your necessity.
<b>SSID</b>	Means the identification of the wireless LAN. SSID can be any text numbers or various special characters.
<b>Isolate</b>	<p><b>VPN</b> – Check this box to make the wireless clients (stations) with different VPN not accessing for each other.</p> <p><b>Member</b> – Check this box to make the wireless clients (stations) with the same SSID not accessing for each other.</p>
<b>Rate Control</b>	<p>It controls the data transmission rate through wireless connection.</p> <p><b>Upload</b> – Check Enable and type the transmitting rate for data upload. Default value is 30,000 kbps.</p> <p><b>Download</b> – Type the transmitting rate for data download. Default value is 30,000 kbps.</p>
<b>Schedule</b>	Set the wireless LAN to work at certain time interval only. You may choose up to 4 schedules out of the 15 schedules pre-defined in <b>Applications &gt;&gt; Schedule</b> setup. The default setting of this field is blank and the function will always work.

After finishing all the settings here, please click **OK** to save the configuration.

### 4.15.3 Security

This page allows you to set security with different modes for SSID 1, 2, 3 and 4 respectively. After configuring the correct settings, please click **OK** to save and invoke it.

The password (PSK) of default security mode is provided and stated on the label pasted on the bottom of the router. For the wireless client who wants to access into Internet through such router, please input the default PSK value for connection.

By clicking the **Security Settings**, a new web page will appear so that you could configure the settings of WPA and WEP.

#### Wireless LAN >> Security Settings

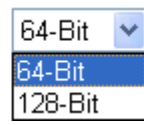

SSID 1	SSID 2	SSID 3	SSID 4
<div>Mode: <div>Mixed(WPA+WPA2)/PSK</div></div> <div><u>WPA</u><div>Encryption Mode:<div></div>Pre-Shared Key(PSK):<div>Type 8~63 ASCII character or 64 Hexadecimal digits leading by "0x". Examples are "AB312" or "0x655abcd....".</div></div></div> <div><u>WEP</u><div>Encryption Mode: <div>64-Bit</div></div><div><div><input checked="" type="radio"/> Key 1 : <div>*****</div></div><div><input type="radio"/> Key 2 : <div>*****</div></div><div><input type="radio"/> Key 3 : <div>*****</div></div><div><input type="radio"/> Key 4 : <div>*****</div></div></div><div><b>Note:</b><div>Please configure the <b>RADIUS Server</b> if 802.1x is used.</div><div>For 64 bit WEP key configurations, please insert 5 ASCII characters or 10 Hexadecimal digits leading by "0x". Examples are "AB312" or "0x4142333132".</div><div>For 128 bit WEP key configurations, please insert 13 ASCII characters or 26 Hexadecimal digits leading by "0x".</div></div></div>			

OK

Cancel

Available settings are explained as follows:

Item	Description
Mode	There are several modes provided for you to choose.

	<p><b>Note:</b> You should also set <b>RADIUS Server</b> simultaneously if 802.1x mode is selected.</p> <p><b>Disable</b> - Turn off the encryption mechanism.</p> <p><b>WEP</b>-Accepts only WEP clients and the encryption key should be entered in WEP Key.</p> <p><b>WEP/802.1x Only</b> - Accepts only WEP clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p><b>WPA/802.1x Only</b>- Accepts only WPA clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p><b>WPA2/802.1x Only</b>- Accepts only WPA2 clients and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p><b>Mixed (WPA+WPA2/802.1x only)</b> - Accepts WPA and WPA2 clients simultaneously and the encryption key is obtained dynamically from RADIUS server with 802.1X protocol.</p> <p><b>WPA/PSK</b>-Accepts only WPA clients and the encryption key should be entered in PSK.</p> <p><b>WPA2/PSK</b>-Accepts only WPA2 clients and the encryption key should be entered in PSK.</p> <p><b>Mixed (WPA+ WPA2)/PSK</b> - Accepts WPA and WPA2 clients simultaneously and the encryption key should be entered in PSK.</p>
<b>WPA</b>	<p>The WPA encrypts each frame transmitted from the radio using the key, which either PSK (Pre-Shared Key) entered manually in this field below or automatically negotiated via 802.1x authentication. Either <b>8~63</b> ASCII characters, such as 012345678(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p> <p><b>Type</b> - Select from Mixed (WPA+WPA2) or WPA2 only.</p> <p><b>Pre-Shared Key (PSK)</b> - Either <b>8~63</b> ASCII characters, such as 012345678..(or 64 Hexadecimal digits leading by 0x, such as "0x321253abcde...").</p>
<b>WEP</b>	<p><b>64-Bit</b> - For 64 bits WEP key, either <b>5</b> ASCII characters, such as 12345 (or 10 hexadecimal digitals leading by 0x, such as 0x4142434445.)</p> <p><b>128-Bit</b> - For 128 bits WEP key, either <b>13</b> ASCII characters, such as ABCDEFGHIJKLM (or 26 hexadecimal digits leading by 0x, such as 0x4142434445464748494A4B4C4D).</p> <p>Encryption Mode:</p> <div data-bbox="1117 1747 1260 1870">  </div> <p>All wireless devices must support the same WEP encryption bit size and have the same key. <b>Four</b> keys can be entered here, but only one key can be selected at a time. The keys can be entered in ASCII or Hexadecimal. Check the key</p>

you wish to use.

After finishing all the settings here, please click **OK** to save the configuration.

#### 4.15.4 Access Control

In the **Access Control**, the router may restrict wireless access to certain wireless clients only by locking their MAC address into a black or white list. The user may block wireless clients by inserting their MAC addresses into a black list, or only let them be able to connect by inserting their MAC addresses into a white list.

In the **Access Control** web page, users may configure the **white/black** list modes used by each SSID and the MAC addresses applied to their lists.

Wireless LAN >> Access Control

Access Control

Enable Mac Address Filter ☐ SSID 1 White List ☐ SSID 2 White List ☐ SSID 3 White List ☐ SSID 4 White List

MAC Address Filter

Index	Attribute	MAC Address	Apply SSID

Client's MAC Address :  :  :  :  :  :

Apply SSID : ☐ SSID 1 ☐ SSID 2 ☐ SSID 3 ☐ SSID 4

Attribute : ☐ s: Isolate the station from LAN

Add Delete Edit Cancel

OK Clear All

Available settings are explained as follows:

Item	Description
<b>Enable Mac Address Filter</b>	Select to enable the MAC Address filter for wireless LAN identified with SSID 1 to 4 respectively. All the clients (expressed by MAC addresses) listed in the box can be grouped under different wireless LAN. For example, they can be grouped under SSID 1 and SSID 2 at the same time if you check SSID 1 and SSID 2.
<b>MAC Address Filter</b>	Display all MAC addresses that are edited before.
<b>Client's MAC Address</b>	Manually enter the MAC address of wireless client.
<b>Apply SSID</b>	After entering the client's MAC address, check the box of the SSIDs desired to insert this MAC address into their access control list.
<b>Attribute</b>	<b>s: Isolate the station from LAN</b> - select to isolate the wireless connection of the wireless client of the MAC

	address from LAN.
<b>Add</b>	Add a new MAC address into the list.
<b>Delete</b>	Delete the selected MAC address in the list.
<b>Edit</b>	Edit the selected MAC address in the list.
<b>Cancel</b>	Give up the access control set up.
<b>OK</b>	Click it to save the access control list.
<b>Clear All</b>	Clean all entries in the MAC address list.

After finishing all the settings here, please click **OK** to save the configuration.

#### 4.15.5 WPS

**WPS (Wi-Fi Protected Setup)** provides easy procedure to make network connection between wireless station and wireless access point (vigor router) with the encryption of WPA and WPA2.

**Note:** Such function is available for the wireless station with WPS supported.

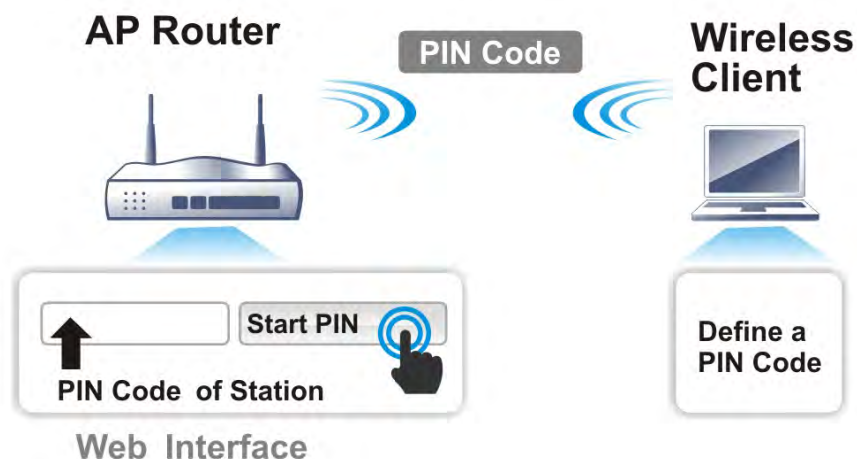

It is the simplest way to build connection between wireless network clients and vigor router. Users do not need to select any encryption mode and type any long encryption passphrase to setup a wireless client every time. He/she only needs to press a button on wireless client, and WPS will connect for client and router automatically.

There are two methods to do network connection through WPS between AP and Stations: pressing the **Start PBC** button or using **PIN Code**.

- On the side of Vigor2132 Series which served as an AP, press **WPS** button once on the front panel of the router or click **Start PBC** on web configuration interface. On the side of a station with network card installed, press **Start PBC** button of network card.

- If you want to use PIN code, you have to know the PIN code specified in wireless client. Then provide the PIN code of the wireless client you wish to connect to the vigor router.

For WPS is supported in WPA-PSK or WPA2-PSK mode, if you do not choose such mode in **Wireless LAN>>Security**, you will see the following message box.

Please click **OK** and go back **Wireless LAN>>Security** to choose WPA-PSK or WPA2-PSK mode and access WPS again.

Below shows **Wireless LAN>>WPS** web page:

**Wireless LAN >> WPS (Wi-Fi Protected Setup)**

☒ Enable WPS 

**Wi-Fi Protected Setup Information**

<b>WPS Status</b>	Configured
<b>SSID</b>	DrayTek
<b>Authentication Mode</b>	Mixed(WPA+WPA2)/PSK

**Device Configure**

<b>Configure via Push Button</b>	<input type="button" value="Start PBC"/>
<b>Configure via Client PinCode</b>	<input type="text"/> <input type="button" value="Start PIN"/>

Status: Wireless LAN is NOT enabled!!

**Note:** WPS can help your wireless client automatically connect to the Access point.

: WPS is Disabled.

: WPS is Enabled.

: Waiting for WPS requests from wireless clients.

Available settings are explained as follows:

Item	Description
<b>Enable WPS</b>	Check this box to enable WPS setting.
<b>WPS Status</b>	Display related system information for WPS. If the wireless security (encryption) function of the router is properly configured, you can see 'Configured' message here.
<b>SSID</b>	Display the SSID1 of the router. WPS is supported by SSID1 only.
<b>Authentication Mode</b>	Display current authentication mode of the router. Only WPA2/PSK and WPA/PSK support WPS.
<b>Configure via Push Button</b>	Click <b>Start PBC</b> to invoke Push-Button style WPS setup procedure. The router will wait for WPS requests from wireless clients about two minutes. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)
<b>Configure via Client PinCode</b>	Please input the PIN code specified in wireless client you wish to connect, and click <b>Start PIN</b> button. The WPS LED on the router will blink fast when WPS is in progress. It will return to normal condition after two minutes. (You need to setup WPS within two minutes)

## 4.15.6 WDS

WDS means Wireless Distribution System. It is a protocol for connecting two access points (AP) wirelessly. Usually, it can be used for the following application:

- Provide bridge traffic between two LANs through the air.
- Extend the coverage range of a WLAN.

To meet the above requirement, two WDS modes are implemented in Vigor router. One is **Bridge**, the other is **Repeater**. Below shows the function of WDS-bridge interface:

The application for the WDS-Repeater mode is depicted as below:

The major difference between these two modes is that: while in **Repeater** mode, the packets received from one peer AP can be repeated to another peer AP through WDS links. Yet in **Bridge** mode, packets received from a WDS link will only be forwarded to local wired or wireless hosts. In other words, only Repeater mode can do WDS-to-WDS packet forwarding.

In the following examples, hosts connected to Bridge 1 or 3 can communicate with hosts connected to Bridge 2 through WDS links. However, hosts connected to Bridge 1 CANNOT communicate with hosts connected to Bridge 3 through Bridge 2.

Click **WDS** from **Wireless LAN** menu. The following page will be shown.

Wireless LAN >> WDS Settings

WDS Settings
[Set to Factory Default](#)

**Mode:** Bridge

---

**Security:**

☒ Disable  
 ☐ WEP  
 ☐ Pre-shared Key

---

**WEP:**

Use the same WEP key set in [Security Settings](#).

---

**Pre-shared Key:**

Type:

☐ WPA  
 ☒ WPA2

Key : \*\*\*\*\*

Note: WPA and WPA2 are not compatible with DrayTek WPA.

Type 8~63 ASCII characters or 64 hexadecimal digits leading by "0x", for example "cfigs01a2..." or "0x655abcd....".

**Bridge**

Enable Peer MAC Address

<input type="checkbox"/>	<span style="border: 1px solid #ccc; padding: 2px 5px;"> </span> : <span style="border: 1px solid #ccc; padding: 2px 5px;"> </span> : <span style="border: 1px solid #ccc; padding: 2px 5px;"> </span> : <span style="border: 1px solid #ccc; padding: 2px 5px;"> </span> : <span style="border: 1px solid #ccc; padding: 2px 5px;"> </span> : <span style="border: 1px solid #ccc; padding: 2px 5px;"> </span>

---

**Access Point Function:**

☒ Enable  
 ☐ Disable

---

**Status:**

☐ Send "Hello" message to peers.

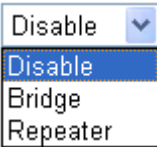

Link Status

Note: The status is valid only when the peer also supports this function.

OK
Cancel

Available settings are explained as follows:

Item	Description
<b>Mode</b>	Choose the mode for WDS setting. <b>Disable</b> mode will not invoke any WDS setting. <b>Bridge</b> mode is designed to fulfill the first type of application. <b>Repeater</b> mode is for the second one.

	
<b>Security</b>	There are three types for security, <b>Disable</b> , <b>WEP</b> and <b>Pre-shared key</b> . The setting you choose here will make the following WEP or Pre-shared key field valid or not. Choose one of the types for the router.
<b>WEP</b>	Check this box to use the same key set in <b>Security Settings</b> page. If you did not set any key in <b>Security Settings</b> page, this check box will be dimmed.
<b>Pre-shared Key</b>	<p><b>Type</b> – There are some types for you to choose. <b>WPA</b> and <b>WPA2</b> are used for WDS devices (e.g. 2920n wireless router, you can set the encryption mode as WPA or WPA2 to establish your WDS system between AP and the router.</p> <p><b>Key</b> - Type 8 ~ 63 ASCII characters or 64 hexadecimal digits leading by "0x".</p>
<b>Bridge</b>	If you choose Bridge as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Yet please disable the unused link to get better performance. If you want to invoke the peer MAC address, remember to check <b>Enable</b> box in the front of the MAC address after typing.
<b>Repeater</b>	If you choose Repeater as the connecting mode, please type in the peer MAC address in these fields. Four peer MAC addresses are allowed to be entered in this page at one time. Similarly, if you want to invoke the peer MAC address, remember to check <b>Enable</b> box in the front of the MAC address after typing.
<b>Access Point Function</b>	Click <b>Enable</b> to make this router serving as an access point; click <b>Disable</b> to cancel this function.
<b>Status</b>	It allows user to send "hello" message to peers. Yet, it is valid only when the peer also supports this function.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.15.7 Advanced Setting

This page allows users to set advanced settings such as operation mode, channel bandwidth, guard interval, and aggregation MSDU for wireless data transmission.

Wireless LAN >> Advanced Setting

### HT Physical Mode

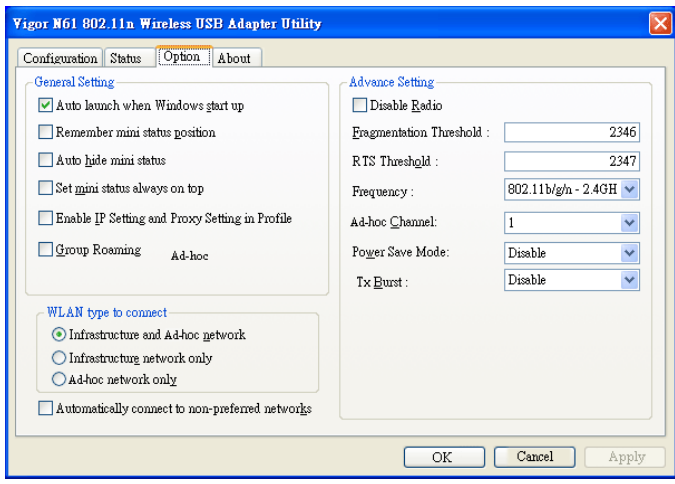

Operation Mode	<input checked="" type="radio"/> Mixed Mode <input type="radio"/> Green Field
Channel Bandwidth	<input type="radio"/> 20 <input checked="" type="radio"/> 20/40
Guard Interval	<input type="radio"/> long <input checked="" type="radio"/> auto
Aggregation MSDU(A-MSDU)	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Long Preamble	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Packet-OVERDRIVE™ TX Burst	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Antenna	<input checked="" type="radio"/> 2T2R <input type="radio"/> 1T1R
Tx Power	<input checked="" type="radio"/> 100% <input type="radio"/> 80% <input type="radio"/> 60% <input type="radio"/> 30% <input type="radio"/> 20% <input type="radio"/> 10%
Rate Adaptation Algorithm	<input checked="" type="radio"/> New <input type="radio"/> Old
Fragment Length (256 - 2346)	<input type="text" value="2346"/>
RTS Threshold (1 - 2347)	<input type="text" value="2347"/>

OK

Available settings are explained as follows:

Item	Description
<b>Operation Mode</b>	<b>Mixed Mode</b> – the router can transmit data with the ways supported in both 802.11a/b/g and 802.11n standards. However, the entire wireless transmission will be slowed down if 802.11g or 802.11b wireless client is connected. <b>Green Field</b> – to get the highest throughput, please choose such mode. Such mode can make the data transmission happening between 11n systems only. In addition, it does not have protection mechanism to avoid the conflict with neighboring devices of 802.11a/b/g.
<b>Channel Bandwidth</b>	<b>20-</b> the router will use 20Mhz for data transmission and receiving between the AP and the stations. <b>20/40</b> – the router will use 20Mhz or 40Mhz for data transmission and receiving according to the station capability. Such channel can increase the performance for data transit.
<b>Guard Interval</b>	It is to assure the safety of propagation delays and reflections for the sensitive digital data. If you choose <b>auto</b> as guard interval, the AP router will choose short guard interval (increasing the wireless performance) or long guard interval for data transmit based on the station capability.
<b>Aggregation MSDU</b>	Aggregation MSDU can combine frames with different sizes. It is used for improving MAC layer's performance for some brand's clients. The default setting is <b>Enable</b> .
<b>Number of Spatial Streams (NSS)</b>	Setup Number of Spatial Stream for Vigor2132ac and Vigor2132Vac. Default value is 2 and connection rate could reach 1.3GBps.
<b>Long Preamble</b>	This option is to define the length of the sync field in an 802.11 packet. Most modern wireless network uses short

	<p>preamble with 56 bit sync field instead of long preamble with 128 bit sync field. However, some original 11b wireless network devices only support long preamble. Click <b>Enable</b> to use <b>Long Preamble</b> if needed to communicate with this kind of devices.</p>
<b>Packet-OVERDRIVE</b>	<p>This feature can enhance the performance in data transmission about 40%* more (by checking <b>Tx Burst</b>). It is active only when both sides of Access Point and Station (in wireless client) invoke this function at the same time. That is, the wireless client must support this feature and invoke the function, too.</p> <p><b>Note:</b> Vigor N61 wireless adapter supports this function. Therefore, you can use and install it into your PC for matching with Packet-OVERDRIVE (refer to the following picture of Vigor N61 wireless utility window, choose <b>Enable</b> for <b>TxBURST</b> on the tab of <b>Option</b>).</p>  <p><b>Tx Burst :</b> <span>Disable</span>  <span>Disable</span>  <span>Enable</span></p> <p><b>Note:</b> * means the real transmission rate depends on the environment of the network.</p>
<b>Tx Power</b>	<p>Set the power percentage for transmission signal of access point. The greater the value is, the higher intensity of the signal will be.</p>
<b>Rate Adaptation Algorithm</b>	<p>Wireless transmission rate is adapted dynamically. Usually, performance of “new” algorithm is better than “old”.</p>
<b>Fragment Length (256 – 2346)</b>	<p>Set the Fragment threshold of wireless radio. Do not modify default value if you don’t know what it is, default value is 2346.</p>
<b>RTS Threshold (1 – 2347)</b>	<p>Minimize the collision (unit is bytes) between hidden stations to improve wireless performance.</p> <p>Set the RTS threshold of wireless radio. Do not modify default value if you don’t know what it is, default value is 2347.</p>

After finishing all the settings here, please click **OK** to save the configuration.

## 4.15.8 WMM Configuration

WMM is an abbreviation of Wi-Fi Multimedia. It defines the priority levels for four access categories derived from 802.1d (prioritization tabs). The categories are designed with specific types of traffic, voice, video, best effort and low priority data. There are four accessing categories - AC\_BE , AC\_BK, AC\_VI and AC\_VO for WMM.

APSD (automatic power-save delivery) is an enhancement over the power-save mechanisms supported by Wi-Fi networks. It allows devices to take more time in sleeping state and consume less power to improve the performance by minimizing transmission latency.

Wireless LAN >> WMM Configuration

APSD Capable ☐ Enable ☒ Disable

WMM Parameters of Access Point

	Aifsn	CWMin	CWMax	Txop	ACM	AckPolicy
AC_BE	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="6"/>	<input type="text" value="0"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_BK	<input type="text" value="7"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_VI	<input type="text" value="1"/>	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="94"/>	<input type="checkbox"/>	<input type="checkbox"/>
AC_VO	<input type="text" value="1"/>	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="47"/>	<input type="checkbox"/>	<input type="checkbox"/>

WMM Parameters of Station

	Aifsn	CWMin	CWMax	Txop	ACM
AC_BE	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>
AC_BK	<input type="text" value="7"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="0"/>	<input type="checkbox"/>
AC_VI	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="4"/>	<input type="text" value="94"/>	<input type="checkbox"/>
AC_VO	<input type="text" value="2"/>	<input type="text" value="2"/>	<input type="text" value="3"/>	<input type="text" value="47"/>	<input type="checkbox"/>

OK

Available settings are explained as follows:

Item	Description
WMM Capable	To apply WMM parameters for wireless data transmission, please click the <b>Enable</b> radio button.
APSD Capable	The default setting is <b>Disable</b> .
Aifsn	It controls how long the client waits for each data transmission. Please specify the value ranging from 1 to 15. Such parameter will influence the time delay for WMM accessing categories. For the service of voice or video image, please set small value for AC_VI and AC_VO categories For the service of e-mail or web browsing, please set large value for AC_BE and AC_BK categories.
CWMin/CWMax	<b>CWMin</b> means contention Window-Min and <b>CWMax</b> means contention Window-Max. Please specify the value ranging from 1 to 15. Be aware that CWMax value must be greater than CWMin or equals to CWMin value. Both values will influence the time delay for WMM accessing categories. The difference between AC_VI and AC_VO

	categories must be smaller; however, the difference between AC_BE and AC_BK categories must be greater.
<b>Txop</b>	It means transmission opportunity. For WMM categories of AC_VI and AC_VO that need higher priorities in data transmission, please set greater value for them to get highest transmission opportunity. Specify the value ranging from 0 to 65535.
<b>ACM</b>	It is an abbreviation of Admission control Mandatory. It can restrict stations from using specific category class if it is checked. <b>Note:</b> Vigor2132FVn provides standard WMM configuration in the web page. If you want to modify the parameters, please refer to the Wi-Fi WMM standard specification.
<b>AckPolicy</b>	“Uncheck” (default value) the box means the AP router will answer the response request while transmitting WMM packets through wireless connection. It can assure that the peer must receive the WMM packets. “Check” the box means the AP router will not answer any response request for the transmitting packets. It will have better performance with lower reliability.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.15.9 AP Discovery

Vigor router can scan all regulatory channels and find working APs in the neighborhood. Based on the scanning result, users will know which channel is clean for usage. Also, it can be used to facilitate finding an AP for a WDS link. Notice that during the scanning process (about 5 seconds), no client is allowed to connect to Vigor.

This page is used to scan the existence of the APs on the wireless LAN. Yet, only the AP which is in the same channel of this router can be found. Please click **Scan** to discover all the connected APs.

### Wireless LAN >> Access Point Discovery

#### Access Point List

Index	BSSID	Channel	RSSI	SSID	Authentication

See [Statistics](#).

---

**Add to WDS Settings :**

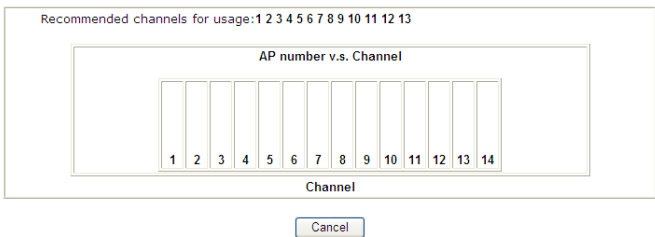

AP's MAC address  :  :  :  :  :

☒ Bridge
 ☐ Repeater

#### Note:

1. During the scanning process (~5 seconds), no station is allowed to connect with the router.
2. AP Discovery can only support up to 32 APs displayed on the screen.

Available settings are explained as follows:

Item	Description
Scan	It is used to discover all the connected AP. The results will be shown on the box above this button.
Statistics	<p>It displays the statistics for the channels used by APs.</p> <p>Wireless LAN &gt;&gt; Site Survey Statistics</p> 
Add to	<p>If you want the found AP applying the WDS settings, please type in the AP's MAC address on the bottom of the page and click Bridge or Repeater. Next, click <b>Add to</b>. Later, the MAC address of the AP will be added to Bridge or Repeater field of WDS settings page.</p>

## 4.15.10 Station List

**Station List** provides the knowledge of connecting wireless clients now along with its status code. There is a code summary below for explanation. For convenient **Access Control**, you can select a WLAN station and click **Add to Access Control** below.

Wireless LAN >> Station List

Station List

General

Advanced

Index	Status	IP Address	MAC Address	Associated with

Refresh

**Status Codes :**  
C: Connected, No encryption.  
E: Connected, WEP.  
P: Connected, WPA.  
A: Connected, WPA2.  
B: Blocked by Access Control.  
N: Connecting.  
F: Fail to pass WPA/PSK authentication.

**Add to Access Control :**

Client's MAC address  :  :  :  :  :

**Note:** After a station connects to the router successfully, it may be turned off without notice. In that case, it will still be on the list until the connection expires.

Add

Available settings are explained as follows:

Item	Description
Refresh	Click this button to refresh the status of station list.
Add	Click this button to add current typed MAC address into <b>Access Control</b> .

## 4.15.11 Station Control

Station Control is used to specify the duration for the wireless client to connect and reconnect Vigor router. If such function is not enabled, the wireless client can connect Vigor router until the router shuts down.

Such feature is especially useful for free Wi-Fi service. For example, a coffee shop offers free Wi-Fi service for its guests for one hour every day. Then, the connection time can be set as “1 hour” and reconnection time can be set as “1 day”. Thus, the guest can finish his job within one hour and will not occupy the wireless network for a long time.

**Note:** Up to 300 Wireless Station records are supported by Vigor router.

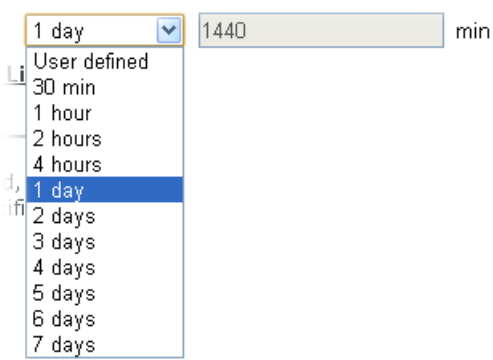

## Wireless LAN >> Station Control

SSID 1	SSID 2	SSID 3	SSID 4
SSID			
DrayTek			
Enable <input type="checkbox"/>			
Connection Time 1 hour ▼			
Reconnection Time 1 day ▼			
<a href="#">Display All Station Control List</a>			
<a href="#">WEB Portal Setup</a>			

**Note:** Once the feature is enabled, the connection time quota will apply to each wireless client (identified by MAC address).

OK Cancel

Available settings are explained as follows:

Item	Description
SSID	Display the SSID that the wireless station will use it to connect with Vigor router.
Enable	Check the box to enable the station control function.
Connection Time / Reconnection Time	Use the drop down list to choose the duration for the wireless client connecting /reconnecting to Vigor router. Or, type the duration manually when you choose <b>User defined</b> . 
Display All Station Control List	All the wireless stations connecting to Vigor router by using such SSID will be listed on Station Control List.
WEB Portal Setup	Click it to access in to <b>LAN&gt;&gt;Web Portal Setup</b> page for modifying the settings if required.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.16 USB Application

USB storage disk connected on Vigor router can be regarded as a server. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications. After setting the configuration in **USB Application**, you can type the IP address of the Vigor router and username/password created in **USB Application>>USB User Management** on the client software. Then, the client can use the FTP site (USB storage disk) or share the files through Vigor router.

**Note:** USB ports on Vigor router are allowed to connect to USB modem. Models of the modems supported by Vigor router can be seen from **USB Application>>Modem Support List**. For network connection via USB modem, refer to **WAN>>Internet Access** and **WAN>>General Setup** for detailed information.

System Maintenance

### 4.16.1 USB General Settings

This page will determine the number of concurrent FTP connection and default charset for FTP server. At present, the Vigor router can support USB storage disk with formats of FAT16 and FAT32 only. Therefore, before connecting the USB storage disk into the Vigor router, please make sure the memory format for the USB storage disk is FAT16 or FAT32. It is recommended for you to use FAT32 for viewing the filename completely (FAT16 cannot support long filename).

USB Application >> USB General Settings

#### USB General Settings

##### General Settings

Simultaneous FTP Connections  (Maximum 6)  
Default Charset

**Note:** 1. If Charset is set to "English", only English long file name is supported.  
2. Multi-session ftp download will be banned by Router FTP server. If your ftp client have multi-connection mechanism, such as FileZilla, you may limit client connections setting to 1 to get better performance.

OK

Available settings are explained as follows:

Item	Description
General Settings	<p><b>Simultaneous FTP Connections</b> - This field is used to specify the quantity of the FTP sessions. The router allows up to 6 FTP sessions connecting to USB storage disk at one time.</p> <p><b>Default Charset</b> - At present, Vigor router supports four types of character sets. Default Charset is for English based file name.</p>

After finishing all the settings here, please click **OK** to save the configuration.

## 4.16.2 USB User Management

This page allows you to set profiles for FTP users. Any user who wants to access into the USB storage disk must type the same username and password configured in this page. Before adding or modifying settings in this page, please insert a USB storage disk first. Otherwise, an error message will appear to warn you.

USB Application >> USB User Management

USB User Management			<a href="#">Set to Factory Default</a>

<a href="#">1.</a>			<a href="#">9.</a>		
<a href="#">2.</a>			<a href="#">10.</a>		
<a href="#">3.</a>			<a href="#">11.</a>		
<a href="#">4.</a>			<a href="#">12.</a>		
<a href="#">5.</a>			<a href="#">13.</a>		
<a href="#">6.</a>			<a href="#">14.</a>		
<a href="#">7.</a>			<a href="#">15.</a>		
<a href="#">8.</a>			<a href="#">16.</a>		

Click index number to access into configuration page.

USB Application >> USB User Management

**Profile Index: 8**

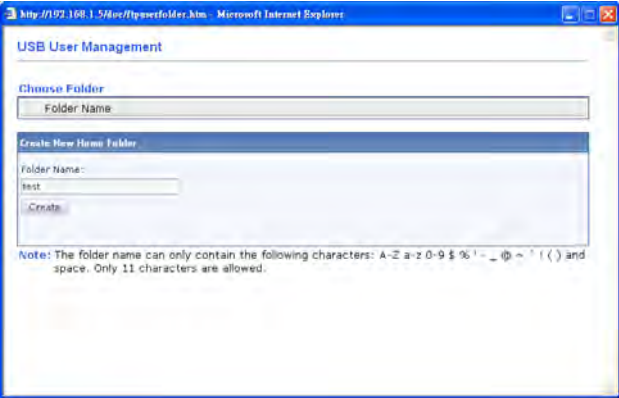

FTP	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Username	<input type="text"/>
Password	<input type="password"/> (Maximum 11 Characters)
Confirm Password	<input type="password"/>
Home Folder	<input type="text"/>
<b>Access Rule</b>	
File	<input type="checkbox"/> Read <input type="checkbox"/> Write <input type="checkbox"/> Delete
Directory	<input type="checkbox"/> List <input type="checkbox"/> Create <input type="checkbox"/> Remove

**Note:** The folder name can only contain the following characters: A-Z a-z 0-9 \$ % ' - \_ @ ~ ` ! ( ) / and space.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
<b>FTP</b>	<p><b>Enable</b> – Click this button to activate this profile (account) for FTP service. Later, the user can use the username specified in this page to login into FTP server.</p> <p><b>Disable</b> – Click this button to disable such profile.</p>

<b>Username</b>	<p>Type the username for FTP users for accessing into FTP server (USB storage disk). Note that users cannot access into USB storage disk in anonymity. Later, you can open FTP client software and type the username specified here for accessing into USB storage disk. The length of the name is limited to 11 characters.</p> <p><b>Note:</b> “Admin” could not be typed here as username, for the word is specified for accessing into web pages of Vigor router only. Also, it is reserved for FTP firmware upgrade usage.</p> <p><b>Note:</b> FTP Passive mode is not supported by Vigor Router. Please disable the mode on the FTP client.</p>
<b>Password</b>	<p>Type the password for FTP users for accessing FTP server. Later, you can open FTP client software and type the password specified here for accessing into USB storage disk. The length of the password is limited to 11 characters.</p>
<b>Confirm Password</b>	<p>Type the password again to make confirmation.</p>
<b>Home Folder</b>	<p>It determines the folder for the client to access into.</p> <p>The user can enter a directory name in this field. Then, after clicking <b>OK</b>, the router will create the specific/new folder in the USB storage disk. In addition, if the user types “/” here, he/she can access into all of the disk folders and files in USB storage disk.</p> <p><b>Note:</b> When write protect status for the USB storage disk is <b>ON</b>, you cannot type any new folder name in this field. Only “/” can be used in such case.</p> <p>You can click  to open the following dialog to add any new folder which can be specified as the Home Folder.</p> 
<b>Access Rule</b>	<p>It determines the authority for such profile. Any user, who uses such profile for accessing into USB storage disk, must follow the rule specified here.</p> <p><b>File</b> – Check the items (Read, Write and Delete) for such profile.</p> <p><b>Directory</b> –Check the items (List, Create and Remove) for such profile.</p>

Before you click **OK**, you have to insert a USB storage disk into the USB interface of the Vigor router. Otherwise, you cannot save the configuration.

### 4.16.3 File Explorer

File Explorer offers an easy way for users to view and manage the content of USB storage disk connected on Vigor router.

USB Application >> File Explorer

File Explorer

   Current Path: /

Name	Size	Delete	Rename
------	------	--------	--------

 Upload File

Select a file:

Note: The folder can not be deleted when it is not empty.

Available settings are explained as follows:

Item	Description
 <b>Refresh</b>	Click this icon to refresh files list.
 <b>Back</b>	Click this icon to return to the upper directory.
 <b>Create</b>	Click this icon to add a new folder.
<b>Current Path</b>	Display current folder.
<b>Upload</b>	Click this button to upload the selected file to the USB storage disk. The uploaded file in the USB diskette can be shared for other user through FTP.

## 4.16.4 USB Device Status

This page is to monitor the status for the users who accessing into FTP (USB storage disk) via the Vigor router. In addition, the status of the USB modem or USB printer connecting to Vigor router can be checked from such page. If you want to remove the storage disk from USB port in router, please click **Disconnect USB Disk** first. And then, remove the USB storage disk later.

USB Application >> USB Device Status

<b>Disk</b>	<b>Printer</b>	<b>Sensor</b>	<b>Refresh</b>
<b>USB Mass Storage Device Status</b>			
Connection Status: <b>No Disk Connected</b>			<input type="button" value="Disconnect USB Disk"/>
Disk Capacity: 0 MB			
Free Capacity: 0 MB			<b>Refresh</b>
<b>USB Disk Users Connected</b>			
<b>Index</b>	<b>Service</b>	<b>IP Address(Port)</b>	<b>Username</b>

**Note:** If the write protect switch of USB disk is turned on, the USB disk is in **READ-ONLY** mode. No data can be written to it.

Available settings are explained as follows:

Item	Description
<b>Connection Status</b>	If there is no USB storage disk connected to Vigor router, “ <b>No Disk Connected</b> ” will be shown here.
<b>Disk Capacity</b>	It displays the total capacity of the USB storage disk.
<b>Free Capacity</b>	It displays the free space of the USB storage disk. Click <b>Refresh</b> at any time to get new status for free capacity.
<b>Index</b>	It displays the number of the client which connecting to FTP server.
<b>IP Address</b>	It displays the IP address of the user’s host which connecting to the FTP server.
<b>Username</b>	It displays the username that user uses to login to the FTP server.

When you insert USB storage disk into the Vigor router, the system will start to find out such device within several seconds.

## 4.16.5 Temperature Sensor

A USB Thermometer is now available that complements your installed DrayTek router installations that will help you monitor the server or data communications room environment and notify you if the server room or data communications room is overheating.

During summer in particular, it is important to ensure that your server or data communications equipment are not overheating due to cooling system failures.

The inclusion of a USB thermometer in compatible Vigor routers will continuously monitor the temperature of its environment. When a pre-determined threshold is reached you will be alerted by either an email or SMS so you can undertake appropriate action.

### Temperature Sensor Settings

USB Application >> Temperature Sensor Setting

Temperature Chart	Temperature Sensor Settings
<b>Display Settings</b>	
Temperature Calibration	<input type="text" value="0.00"/>
Temperature Unit	<input checked="" type="radio"/> Celsius <input type="radio"/> Fahrenheit
<b>Alarm Settings</b>	
<input type="checkbox"/> Enable Syslog Alarm	
Upper temperature limit	<input type="text" value="30.00"/>
Lower temperature limit	<input type="text" value="18.00"/>
<input type="button" value="OK"/>	

Available settings are explained as follows:

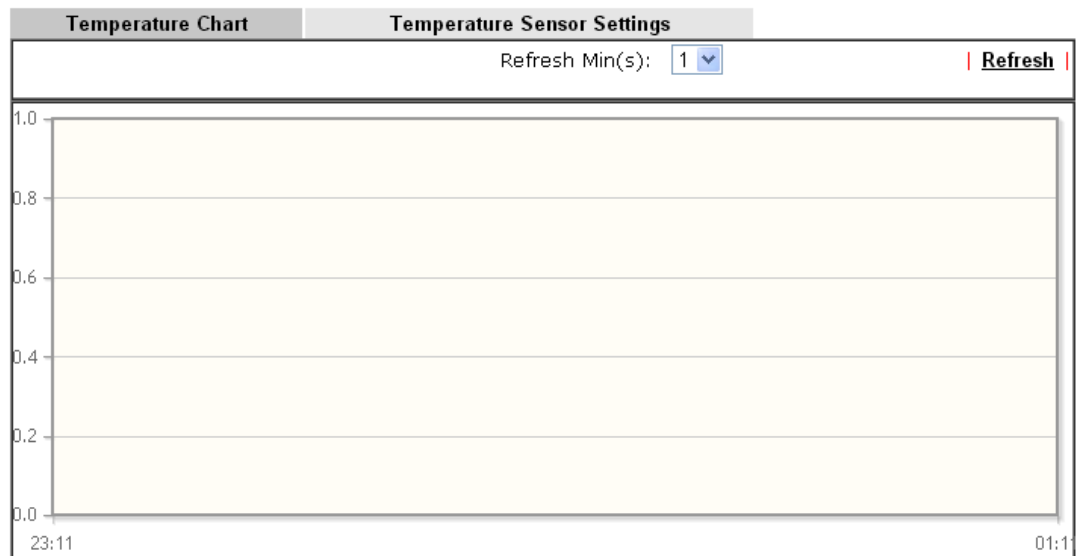

Item	Description
Display Settings	<b>Temperature Calibration</b> - Type a value used for correcting the temperature error. <b>Temperature Unit</b> - Choose the display unit of the temperature. There are two types for you to choose.
Alarm Settings	<b>Enable Syslog Alarm</b> – Check this box to enable the function. <b>Upper temperature limit/Lower temperature limit</b> - Type the upper limit and lower limit for the system to send out temperature alert.

After finishing all the settings here, please click **OK** to save the configuration.

## 4.17 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade and Activation.

Below shows the menu items for System Maintenance.

### 4.17.1 System Status

The **System Status** provides basic network settings of Vigor router. It includes LAN and WAN interface information. Also, you could get the current running firmware version or firmware related information from this presentation.

#### System Status

**Model Name** : Vigor2132Fn  
**Firmware Version** : 3.7.8.2  
**Build Date/Time** : Dec 24 2015 15:07:29

LAN					
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	00-1D-AA-C5-59-40	192.168.1.1	255.255.255.0	ON	8.8.8.8
LAN2	00-1D-AA-C5-59-40	192.168.2.1	255.255.255.0	ON	8.8.8.8
LAN3	00-1D-AA-C5-59-40	192.168.3.1	255.255.255.0	ON	8.8.8.8
LAN4	00-1D-AA-C5-59-40	192.168.4.1	255.255.255.0	ON	8.8.8.8

**User Mode** is OFF now.

Available settings are explained as follows:

<b>Item</b>	<b>Description</b>
<b>Model Name</b>	Display the model name of the router.
<b>Firmware Version</b>	Display the firmware version of the router.
<b>Build Date/Time</b>	Display the date and time of the current firmware build.
<b>LAN</b>	<p><b>MAC Address</b></p> <ul style="list-style-type: none"> <li>- Display the MAC address of the LAN Interface.</li> </ul> <p><b>IP Address</b></p> <ul style="list-style-type: none"> <li>- Display the IP address of the LAN interface.</li> </ul> <p><b>Subnet Mask</b></p> <ul style="list-style-type: none"> <li>- Display the subnet mask address of the LAN interface.</li> </ul> <p><b>DHCP Server</b></p> <ul style="list-style-type: none"> <li>- Display the current status of DHCP server of the LAN interface</li> </ul> <p><b>DNS</b></p> <ul style="list-style-type: none"> <li>- Display the assigned IP address of the primary DNS.</li> </ul>
<b>WAN</b>	<p><b>Link Status</b></p> <ul style="list-style-type: none"> <li>- Display current connection status.</li> </ul> <p><b>MAC Address</b></p> <ul style="list-style-type: none"> <li>- Display the MAC address of the WAN Interface.</li> </ul> <p><b>Connection</b></p> <ul style="list-style-type: none"> <li>- Display the connection type.</li> </ul> <p><b>IP Address</b></p> <ul style="list-style-type: none"> <li>- Display the IP address of the WAN interface.</li> </ul> <p><b>Default Gateway</b></p> <ul style="list-style-type: none"> <li>- Display the assigned IP address of the default gateway.</li> </ul>
<b>IPv6</b>	<p><b>Address</b> - Display the IPv6 address for LAN.</p> <p><b>Scope</b> - Display the scope of IPv6 address. For example, IPv6 <b>Link Local</b> could only be used for direct IPv6 link. It can't be used for IPv6 internet.</p> <p><b>Internet Access Mode</b> – Display the connection mode chosen for accessing into Internet.</p>

## 4.17.2 TR-069

This device supports TR-069 standard. It is very convenient for an administrator to manage a TR-069 device through an Auto Configuration Server, e.g., VigorACS.

### System Maintenance >> TR-069 Setting

#### ACS and CPE Settings

<b>ACS Server On</b>	Internet ▼
<b>ACS Server</b>	
URL	http://vigoracs.draytek.com/ACSServer/services/ACSServlet
Username	alpha
Password	*****
	Test With Inform    Event Code
	PERIODIC ▼
Last Inform Response Time : Thu Aug 7 10:27:16 2014 	
<b>CPE Client</b>	
<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
URL	http://111.251.216.33:8069/cwm/CRN.html
Port	8069
Username	vigor
Password	*****

#### Periodic Inform Settings

<input type="radio"/> Disable	
<input checked="" type="radio"/> Enable	
Interval Time	900 second(s)

#### STUN Settings

<input checked="" type="radio"/> Disable	
<input type="radio"/> Enable	
Server Address	
Server Port	3478
Minimum Keep Alive Period	60 second(s)
Maximum Keep Alive Period	-1 second(s)

OK

Available settings are explained as follows:

Item	Description
<b>ACS Server On</b>	Choose the interface for the router connecting to ACS server.
<b>ACS Server</b>	<p><b>URL/Username/Password</b> – Such data must be typed according to the ACS (Auto Configuration Server) you want to link. Please refer to Auto Configuration Server user's manual for detailed information.</p> <p><b>Test With Inform</b> – Click it to send a message based on the event code selection to test if such CPE is able to communicate with VigorACS SI server.</p> <p><b>Event Code</b> – Use the drop down menu to specify an event to perform the test.</p> <p><b>Last Inform Response Time</b> – Display the time that VigorACS server made a response while receiving Inform message from CPE last time.</p>
<b>CPE Client</b>	Such information is useful for Auto Configuration Server.

	<p><b>Enable/Disable</b> – Allow/Deny the CPE Client to connect with Auto Configuration Server.</p> <p><b>Port</b> – Sometimes, port conflict might be occurred. To solve such problem, you might change port number for CPE.</p> <p><b>Username and Password</b> – Type the username and password that VigorACS can use to access into such CPE.</p>
<b>Periodic Inform Settings</b>	<p>The default setting is <b>Enable</b>. Please set interval time or schedule time for the router to send notification to CPE. Or click <b>Disable</b> to close the mechanism of notification.</p>
<b>STUN Settings</b>	<p>The default is <b>Disable</b>. If you click <b>Enable</b>, please type the relational settings listed below:</p> <p><b>Server IP</b> – Type the IP address of the STUN server.</p> <p><b>Server Port</b> – Type the port number of the STUN server.</p> <p><b>Minimum Keep Alive Period</b> – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the minimum period. The default setting is “60 seconds”.</p> <p><b>Maximum Keep Alive Period</b> – If STUN is enabled, the CPE must send binding request to the server for the purpose of maintaining the binding in the Gateway. Please type a number as the maximum period. A value of “-1” indicates that no maximum period is specified.</p>

After finishing all the settings here, please click **OK** to save the configuration.

### 4.17.3 Administrator Password

This page allows you to set new password.

System Maintenance >> Administrator Password Setup

#### Administrator Password

Old Password	<input type="password"/>	
New Password	<input type="password"/>	(Max. 23 characters allowed)
Confirm Password	<input type="password"/>	(Max. 23 characters allowed)

**Note:** Password can contain only a-z A-Z 0-9 , ; : . " < > \* + = \ | ? @ # ^ ! ( ) \$ % &

#### Administrator Local User

☐ Local User

**Local User List**

Index	User Name

**Specific User**

User Name:

Password:

Confirm Password:

☒ Enable 'Admin' Login From Wan

OK

Available settings are explained as follows:

Item	Description
Administrator Password	<p><b>Old Password</b> - Type in the old password. The factory default setting for password is “admin”.</p> <p><b>New Password</b> -Type in new password in this field. The length of the password is limited to 23 characters.</p> <p><b>Confirm Password</b> -Type in the new password again.</p>
Administrator Local User	<p>The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements. This feature allows other user in LAN who can access into the web user interface with the same privilege of the administrator.</p> <p><b>Local User</b> – Check the box to enable the local user configuration.</p> <p><b>Local User List</b> – It displays the username of the local user.</p> <p><b>User Name</b> – Give a user name for the local user.</p> <p><b>Password</b> – Type the password for the local user.</p> <p><b>Confirm Password</b> – Type the password again for confirmation.</p> <p><b>Add</b> – After typing the user name and password above, simply click it to create a new local user. The new one will</p>

	<p>be shown on the Local User List immediately.</p> <p><b>Edit</b> – If the username listed on the box above is not satisfied, simply click the username and modify it on the field of User Name. Later, click <b>Edit</b> to update the information.</p> <p><b>Delete</b> – If the local user listed on the box above is not satisfied, simply click the username and click <b>Delete</b> to remove it.</p> <p><b>Enable Admin Login From Wan</b> – The default setting is enabled. It can ensure any user accessing into web user interface of Vigor router through <b>Internet</b> by username/password of “admin/admin”.</p>
--	--

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again.

## 4.17.4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

☐ Enable User Mode for simple web configuration

User Password

[Set to Factory Default](#)

Password	<input type="text"/>	(Max. 23 characters allowed)
Confirm Password	<input type="text"/>	(Max. 23 characters allowed)

**Note:** 1.Password can contain only a-z A-Z 0-9 , ; : " < > \* + = \ | ? @ # ^ ! ( )  
2.Password can't be only \*.Example: '\*' or '\*\*' or '\*\*\*' is illegal, but '123\*' or '\*45' is OK.

OK

Available settings are explained as follows:

Item	Description
<b>Enable User Mode for simple web configuration</b>	After checking this box, you can access into the web user interface with the password typed here for simple web configuration. The settings on simple web user interface will be different with full web use interface accessed by using the administrator password.
<b>Password</b>	Type in new password in this field. The length of the password is limited to 31 characters.
<b>Confirm Password</b>	Type in the new password again.
<b>Set to Factory Default</b>	Click to return to the factory default setting.

When you click **OK**, the login window will appear. Please use the new password to access into the web user interface again.

Below shows an example for accessing into User Operation with User Password.

1. Open **System Maintenance>>User Password**.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Type a new password in the field of New Password and click **OK**.

System Maintenance >> User Password

☒ Enable User Mode for simple web configuration

User Password

Password	<input type="password"/>
Confirm Password	<input type="password"/>

3. The following screen will appear. Simply click **OK**.

System Maintenance >> User Password

Active Configuration

Password	: *****
----------	---------

4. Log out Vigor router web user interface by clicking the Logout button.

5. The following window will be open to ask for username and password. Type the new user password in the field of **Password** and click **Login**.

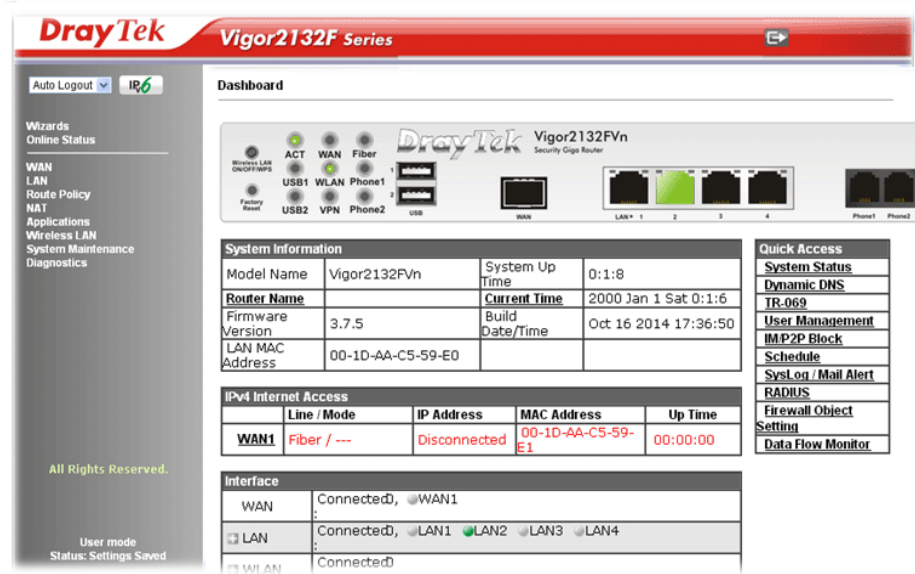

**DrayTek** **Vigor2132F Series**

**Login**

Username	<input type="text"/>
Password	<input type="password"/>

Login

6. The main screen with User Mode will be shown as follows.

Settings to be configured in User Mode will be less than settings in Admin Mode. Only basic configuration settings will be available in User Mode.

**Note:** Setting in User Mode can be configured as same as in Admin Mode.

## 4.17.5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

System Maintenance >> Login Page Greeting

### Login Page Greeting

☐ Enable

Login Page Title  (31 char max.)

Welcome Message and Bulletin (Max 511 characters) [Preview](#) | [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:  
<h1><b><font color=red>Welcome Message</font></b></h1>  
<p>Message</p>

Available settings are explained as follows:

Item	Description
<b>Enable</b>	Check this box to enable the login customization function.
<b>Login Page Title</b>	Type a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
<b>Welcome Message and Bulletin</b>	Type words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not type URL redirect link here.
<b>Preview</b>	Click it to display the preview of the login window based on the settings on this web page.
<b>Set to Factory Default</b>	Click to return to the factory default setting.

Below shows an example of login customization with the information typed in Login Description and Bulletin.

The screenshot displays the login interface for the DrayTek Vigor2132F Series. At the top, the DrayTek logo and 'Vigor2132F Series' are shown. Below this is a 'Login' tab. The main content area is titled 'Just for Carrie' and contains a login form with fields for 'Username' and 'Password', and a 'Login' button. Below the form, a 'Welcome Message' section is shown, indicating that the message is customizable and can be written in HTML.

**DrayTek** **Vigor2132F Series**

**Login**

Just for Carrie

Username

Password

Login

**Welcome Message**

This welcome message is displayed in the Login page of the router. Replace this text with your own message.

1. The welcome message can be written in HTML, so lists such as this one can be created
2. Other markup tags such as p, font or img can be used

## 4.17.6 Configuration Backup

### Backup the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

**System Maintenance >> Configuration Backup**

#### Configuration Backup / Restoration

##### Restore

Restore settings from a configuration file.

未選擇任何檔案

Click Restore to upload the file.

##### Backup

Back up the current settings into a configuration file.

Available settings are explained as follows:

Item	Description
<b>Restoration</b>	<b>Select</b> – Click it to specify a file to be restored. Click <b>Restore</b> to restore the configuration. If the file is encrypted, the system will ask you to type the password to decrypt the configuration file.
<b>Backup</b>	Click it to perform the configuration backup of this router.

2. Click **Backup** button to get into the following dialog. Click **Save** button to open another dialog for saving configuration as a file.

3. In **Save As** dialog, the default filename is **config.cfg**. You could give it another name by yourself.

4. Click **Save** button, the configuration will download automatically to your computer as a file named **config.cfg**.

The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

**Note:** Backup for Certification must be done independently. The Configuration Backup does not include information of Certificate.

## Restore Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be popped-up, as shown below.

**System Maintenance >> Configuration Backup**

### Configuration Backup / Restoration

<p><b>Restore</b></p> <p>Restore settings from a configuration file.</p> <p>選擇檔案 未選擇任何檔案</p> <p>Click Restore to upload the file.</p> <p style="text-align: center;"><input type="button" value="Restore"/></p>
<p><b>Backup</b></p> <p>Back up the current settings into a configuration file.</p> <p style="text-align: center;"><input type="button" value="Backup"/></p>

2. Click **Select** button to choose the correct configuration file for uploading to the router.
3. Click **Restore** button and wait for few seconds, the following picture will tell you that the restoration procedure is successful.

### 4.17.7 Syslog/Mail Alert

SysLog function is provided for users to monitor router. There is no bother to directly get into the Web user interface of the router or borrow debug equipments.

System Maintenance >> SysLog / Mail Alert Setup

**SysLog / Mail Alert Setup**  
**SysLog Access Setup**  
☒ Enable  
Syslog Save to:  
☒ Syslog Server  
☐ USB Disk  
**Router Name**   
Server IP Address   
Destination Port   
Mail Syslog ☐ Enable  
Enable syslog message:  
☒ Firewall Log  
☒ VPN Log  
☒ User Access Log  
☒ Call Log  
☒ WAN Log  
☒ Router/DSL information  
**AlertLog Setup**  
☐ Enable  
AlertLog Port

**Mail Alert Setup**  
☐ Enable   
SMTP Server   
SMTP Port   
Mail To   
Return-Path   
☐ Use SSL  
☐ Authentication  
Username   
Password   
Enable E-Mail Alert:  
☒ DoS Attack  
☒ IM-P2P  
☒ VPN LOG

**Note:** 1. Mail Syslog cannot be activated unless USB Disk is ticked for "Syslog Save to".  
2. Mail Syslog feature sends a Syslog file when its size reaches 1M Bytes.  
3. We only support secured SMTP connection on port 465.

Available settings are explained as follows:

Item	Description
<b>SysLog Access Setup</b>	<p><b>Enable</b> - Check <b>Enable</b> to activate function of syslog.</p> <p><b>Syslog Save to</b> – Check <b>Syslog Server</b> to save the log to Syslog server.</p> <p><b>USB Disk</b> - Check <b>USB Disk</b> to save the log to the attached USB storage disk.</p> <p><b>Router Name</b> - Display the name for such router configured in <b>System Maintenance&gt;&gt;Management</b>. If there is no name here, simply lick the link to access into <b>System Maintenance&gt;&gt;Management</b> to set the router name.</p> <p><b>Server IP Address</b> -The IP address of the Syslog server.</p> <p><b>Destination Port</b> - Assign a port for the Syslog protocol.</p> <p><b>Mail Syslog</b> – Check the box to recode the mail event on Syslog.</p> <p><b>Enable syslog message</b> - Check the box listed on this web page to send the corresponding message of firewall, VPN, User Access, Call, WAN, Router/DSL information to Syslog.</p>

<b>AlertLog Setup</b>	<p>Check <b>Enable</b> to activate function of alert log.</p> <p><b>AlertLog Port</b> - Type the port number for alert log. The default setting is 514.</p>
<b>Mail Alert Setup</b>	<p>Check <b>Enable</b> to activate function of mail alert.</p> <p><b>Send a test e-mail</b> - Make a simple test for the e-mail address specified in this page. Please assign the mail address first and click this button to execute a test for verify the mail address is available or not.</p> <p><b>SMTP Server/SMTP Port</b> - The IP address/Port number of the SMTP server.</p> <p><b>Mail To</b> - Assign a mail address for sending mails out.</p> <p><b>Return-Path</b> - Assign a path for receiving the mail from outside.</p> <p><b>Use SSL</b> - Check this box to use port 465 for SMTP server for some e-mail server uses https as the transmission method.</p> <p><b>Authentication</b> - Check this box to activate this function while using e-mail application.</p> <ul style="list-style-type: none"> <li>● <b>User Name</b> - Type the user name for authentication.</li> <li>● <b>Password</b> - Type the password for authentication.</li> </ul> <p><b>Enable E-mail Alert</b> - Check the box to send alert message to the e-mail box while the router detecting the item(s) you specify here.</p>

Click **OK** to save these settings.

For viewing the Syslog, please do the following:

1. Just set your monitor PC's IP address in the field of Server IP Address
2. Install the Router Tools in the **Utility** within provided CD. After installation, click on the **Router Tools>>Syslog** from program menu.

3. From the Syslog screen, select the router you want to monitor. Be reminded that in **Network Information**, select the network adapter used to connect to the router. Otherwise, you won't succeed in retrieving information from the router.

## 4.17.8 Time and Date

It allows you to specify where the time of the router should be inquired from.

System Maintenance >> Time and Date

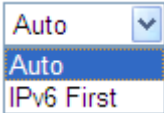

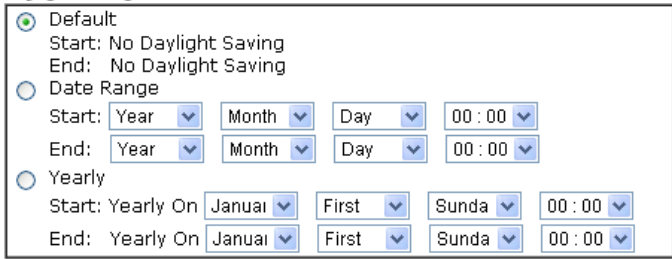

### Time Information

Current System Time	2014 Aug 7 Thu 11 : 32 : 12	<a href="#">Inquire Time</a>
---------------------	-----------------------------	------------------------------

### Time Setup

<input type="radio"/> Use Browser Time	
<input checked="" type="radio"/> Use Internet Time	
Time Server	<input type="text" value="pool.ntp.org"/>
Priority	<input type="button" value="Auto"/>
Time Zone	<input type="button" value="(GMT+08:00) Taipei"/>
Enable Daylight Saving	<input type="checkbox"/> <a href="#">Advanced</a>
Automatically Update Interval	<input type="button" value="1 day"/>

Available settings are explained as follows:

Item	Description
<b>Current System Time</b>	Click <b>Inquire Time</b> to get the current time.
<b>Use Browser Time</b>	Select this option to use the browser time from the remote administrator PC host as router's system time.
<b>Use Internet Time</b>	Select to inquire time information from Time Server on the Internet using assigned protocol.
<b>Time Server</b>	Type the web site of the time server.
<b>Priority</b>	Choose Auto or IPv6 First as the priority. 
<b>Time Zone</b>	Select the time zone where the router is located.
<b>Enable Daylight Saving</b>	<p>Check the box to enable the daylight saving. Such feature is available for certain area.</p> <p><b>Advanced</b> – Click it to open a pop up dialog.</p> <div> <p><b>Daylight Saving Advanced</b></p>  <p><input type="button" value="OK"/> <input type="button" value="Close"/></p> </div> <p>Use the default time setting or set user defined time for your requirement.</p>

<b>Automatically Update Interval</b>	Select a time interval for updating from the NTP server.
--------------------------------------	--

Click **OK** to save these settings.

### 4.17.9 SNMP

This page allows you to configure settings for SNMP and SNMPV3 services.

The SNMPv3 is **more secure than** SNMP through the encryption method (support AES and DES) and authentication method (support MD5 and SHA) for the management needs.

System Maintenance >> SNMP

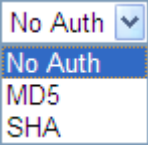

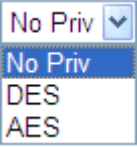

#### SNMP Setup

<input checked="" type="checkbox"/> Enable SNMP Agent			
Get Community	<input type="text" value="public"/>		
Set Community	<input type="text" value="private"/>

Privacy Password	<input type="text"/>		

OK Cancel

Available settings are explained as follows:

Item	Description
<b>Enable SNMP Agent</b>	Check it to enable this function.
<b>Get Community</b>	Set the name for getting community by typing a proper

	character. The default setting is <b>public</b> . The maximum length of the text is limited to 23 characters.
<b>Set Community</b>	Set community by typing a proper name. The default setting is <b>private</b> . The maximum length of the text is limited to 23 characters.
<b>Manager Host IP (IPv4)</b>	Set one host as the manager to execute SNMP function. Please type in IPv4 address to specify certain host.
<b>Manager Host IP (IPv6)</b>	Set one host as the manager to execute SNMP function. Please type in IPv6 address to specify certain host.
<b>Trap Community</b>	Set trap community by typing a proper name. The default setting is <b>public</b> . The maximum length of the text is limited to 23 characters.
<b>Notification Host IP (IPv4)</b>	Set the IPv4 address of the host that will receive the trap community.
<b>Notification Host IP (IPv6)</b>	Set the IPv6 address of the host that will receive the trap community.
<b>Trap Timeout</b>	The default setting is 10 seconds.
<b>Enable SNMPV3 Agent</b>	Check it to enable this function.
<b>USM User</b>	USM means user-based security mode. Type a username which will be used for authentication. The maximum length of the text is limited to 23 characters.
<b>Auth Algorithm</b>	Choose one of the encryption methods listed below as the authentication algorithm. 
<b>Auth Password</b>	Type a password for authentication. The maximum length of the text is limited to 23 characters.
<b>Privacy Algorithm</b>	Choose one of the methods listed below as the privacy algorithm. 
<b>Privacy Password</b>	Type a password for privacy. The maximum length of the text is limited to 23 characters.

Click **OK** to save these settings.

## 4.17.10 Management

This page allows you to manage the settings for Internet/LAN Access Control, Access List from Internet, Management Port Setup, and CVM Access Control.

The management pages for IPv4 and IPv6 protocols are different.

### For IPv4

System Maintenance >> Management

IPv4 Management Setup	IPv6 Management Setup												
Router Name <input type="text"/>													
<input type="checkbox"/> Default: Disable Auto-Logout  <b>Internet Access Control</b> <input type="checkbox"/> Allow management from the Internet Domain name allowed <input type="text"/> <input type="checkbox"/> FTP Server <input checked="" type="checkbox"/> HTTP Server <input checked="" type="checkbox"/> HTTPS Server <input checked="" type="checkbox"/> Telnet Server <input checked="" type="checkbox"/> TR069 Server <input type="checkbox"/> SSH Server <input checked="" type="checkbox"/> Disable PING from the Internet  <b>LAN Access Control</b> <input checked="" type="checkbox"/> Allow management from LAN <input checked="" type="checkbox"/> FTP Server <input checked="" type="checkbox"/> HTTP Server <input checked="" type="checkbox"/> HTTPS Server <input checked="" type="checkbox"/> Telnet Server <input checked="" type="checkbox"/> SSH Server <b>Apply To Subnet</b> <input checked="" type="checkbox"/> LAN2 <input checked="" type="checkbox"/> LAN3 <input checked="" type="checkbox"/> LAN4 <input checked="" type="checkbox"/> IP Routed Subnet  <b>Access List from the Internet</b> <table border="1"> <thead> <tr> <th>List</th> <th>IP</th> <th>Subnet Mask</th> </tr> </thead> <tbody> <tr> <td>1</td> <td><input type="text"/></td> <td><input type="text"/></td> </tr> <tr> <td>2</td> <td><input type="text"/></td> <td><input type="text"/></td> </tr> <tr> <td>3</td> <td><input type="text"/></td> <td><input type="text"/></td> </tr> </tbody> </table>	List	IP	Subnet Mask	1	<input type="text"/>	<input type="text"/>	2	<input type="text"/>	<input type="text"/>	3	<input type="text"/>	<input type="text"/>	<b>Management Port Setup</b> <input checked="" type="radio"/> User Define Ports <input type="radio"/> Default Ports Telnet Port <input type="text" value="23"/> (Default: 23) HTTP Port <input type="text" value="80"/> (Default: 80) HTTPS Port <input type="text" value="443"/> (Default: 443) FTP Port <input type="text" value="21"/> (Default: 21) TR069 Port <input type="text" value="8069"/> (Default: 8069) SSH Port <input type="text" value="22"/> (Default: 22)  <b>TLS/SSL Encryption Setup</b> <input type="checkbox"/> Enable SSL 3.0
List	IP	Subnet Mask											
1	<input type="text"/>	<input type="text"/>											
2	<input type="text"/>	<input type="text"/>											
3	<input type="text"/>	<input type="text"/>											

**Note:** Subnet LAN1 is always allowed to access all the router services regardless of "LAN Access Control" settings.

OK

Available settings are explained as follows:

Item	Description
<b>Router Name</b>	Type in the router name provided by ISP.
<b>Default: Disable Auto-Logout</b>	If it is enabled, the function of auto-logout for web user interface will be disabled.  

	<p>The web user interface will be open until you click the Logout icon manually.</p> 
<b>Internet Access Control</b>	<p><b>Allow management from the Internet</b> - Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify.</p> <p><b>Disable PING from the Internet</b> - Check the checkbox to reject all PING packets from the Internet. For security issue, this function is enabled by default.</p>
<b>LAN Access Control</b>	<p><b>Allow management from LAN</b>- Enable the checkbox to allow system administrators to login from LAN interface. There are several servers provided by the system which allow you to manage the router from LAN interface. Check the box(es) to specify.</p> <p><b>Apply To Subnet</b> – Check the interface for the administrator to use for accessing into web user interface of Vigor router.</p>
<b>Access List from the Internet</b>	<p>You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed.</p> <p><b>List IP</b> - Indicate an IP address allowed to login to the router.</p> <p><b>Subnet Mask</b> - Represent a subnet mask allowed to login to the router.</p>
<b>Management Port Setup</b>	<p><b>User Define Ports</b> - Check to specify user-defined port numbers for the Telnet, HTTP, HTTPS, FTP, TR-069 and SSH servers.</p> <p><b>Default Ports</b> - Check to use standard port numbers for the Telnet and HTTP servers.</p>
<b>TLS/SSL Encryption Setup</b>	<p><b>Enable SSL 3.0</b> – Check the box to enable the function of SSL 3.0 if required.</p> <p>Due to security consideration, the built-in HTTPS and SSL VPN server of the router had upgraded to TLS1.x protocol. If you are using old browser(e.g. IE6.0) or old SmartVPN Client, you may still need to enable SSL 3.0 to make sure you can connect, however, it's not recommended.</p>

After finished the above settings, click **OK** to save the configuration.

## For IPv6

System Maintenance >> Management

IPv4 Management Setup	IPv6 Management Setup
<b>Management Access Control</b> Allow management from the Internet <input type="checkbox"/> Telnet Server ( Port : 23) <input type="checkbox"/> HTTP Server ( Port : 2860) <input type="checkbox"/> HTTPS Server ( Port : 443) <input type="checkbox"/> SSH Server ( Port : 22) <input type="checkbox"/> Enable PING from the Internet	
<b>Access List</b> List IPv6 Address / Prefix Length 1. <input type="text"/> / <input type="text"/> 2. <input type="text"/> / <input type="text"/> 3. <input type="text"/> / <input type="text"/> <b>Note :</b> Telnet / Http server port is the same as IPv4.	
<input type="button" value="OK"/>	

Available settings are explained as follows:

Item	Description
Management Access Control	<b>Allow management from the Internet</b> - Enable the checkbox to allow system administrators to login from the Internet. There are several servers provided by the system to allow you managing the router from Internet. Check the box(es) to specify. <b>Enable PING from the Internet</b> - Check the checkbox to enable all PING packets from the Internet. For security issue, this function is disabled by default.
Access List	You could specify that the system administrator can only login from a specific host or network defined in the list. A maximum of three IPs/subnet masks is allowed. <b>IPv6 Address /Prefix Length</b> - Indicate the IP address(es) allowed to login to the router.

After finished the above settings, click **OK** to save the configuration.

### 4.17.11 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to open the following page.

System Maintenance >> Reboot System

#### Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration
- ☐ Using factory default configuration

Reboot Now

#### Auto Reboot Time Schedule

Index(1-15) in Schedule Setup: , , ,

Note: Action and Idle Timeout settings will be ignored.

OK

Cancel

**Index (1-15) in Schedule Setup** - You can type in four sets of time schedule for performing system reboot. All the schedules can be set previously in **Applications >> Schedule** web page and you can use the number that you have set in that web page.

If you want to reboot the router using the current configuration, check **Using current configuration** and click **Reboot Now**. To reset the router settings to default values, check **Using factory default configuration** and click **Reboot Now**. The router will take 5 seconds to reboot the system.

Note: When the system pops up Reboot System web page after you configure web settings, please click **Reboot Now** to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

## 4.17.12 Firmware Upgrade

Before upgrading your router firmware, you need to install the Router Tools. The **Firmware Upgrade Utility** is included in the tools. The following web page will guide you to upgrade firmware by using an example. Note that this example is running over Windows OS (Operating System).

Download the newest firmware from DrayTek's web site or FTP site. The DrayTek web site is [www.DrayTek.com](http://www.DrayTek.com) (or local DrayTek's web site) and FTP site is [ftp.DrayTek.com](ftp://DrayTek.com).

Click **System Maintenance>> Firmware Upgrade** to launch the Firmware Upgrade Utility.

System Maintenance >> Firmware Upgrade

### Web Firmware Upgrade

Select a firmware file.

未選擇任何檔案

Click Upgrade to upload the file.

### TFTP Firmware Upgrade from LAN

Current Firmware Version: 3.7.8.2

#### Firmware Upgrade Procedures:

1. Click "OK" to start the TFTP server.
2. Open the Firmware Upgrade Utility or other 3-party TFTP client software.
3. Check that the firmware filename is correct.
4. Click "Upgrade" on the Firmware Upgrade Utility to start the upgrade.
5. After the upgrade is complete, the TFTP server will automatically stop running.

Do you want to upgrade firmware ?

**Note:** Upgrade using the ALL file will retain existing router configuration, whereas using the RST file will reset the configuration to factory defaults.

Choose the right firmware by clicking **Browse**. Then, click **Upgrade**. The system will upgrade the firmware of the router automatically.

Or, click **OK**. The following screen will appear. Then, execute the firmware upgrade utility.

System Maintenance >> Firmware Upgrade

TFTP server is running. Please execute a Firmware Upgrade Utility software to upgrade router's firmware. This server will be closed by itself when the firmware upgrading finished.

### 4.17.13 Activation

There are three ways to activate WCF on vigor router, using **Service Activation Wizard**, by means of **CSM>>Web Content Filter Profile** or via **System Maintenance>>Activation**.

After you have finished the setting profiles for WCF (refer to **Web Content Filter Profile**), it is the time to activate the mechanism for your computer.

Click **System Maintenance>>Activation** to open the following page for accessing <http://myvigor.draytek.com>.

System Maintenance >> Activation

Web-Filter License

[Activate](#)

[Status:Not Activated]

Authentication Message

**Note:** If you want to use email alert or syslog, please configure the [SysLog/Mail Alert Setup](#) page.  
If you change the service provider, the configuration of the function will be reset.

OK

Cancel

Available settings are explained as follows:

Item	Description
Activate	The <b>Activate</b> link brings you accessing into <a href="http://www.vigorpro.com">www.vigorpro.com</a> to finish the activation of the account and the router.
Authentication Message	As for authentication information of <b>web filter</b> , the process of authenticating will be displayed on this field for your reference.

Below shows the successful activation of Web Content Filter:

Web-Filter License [Activate](#)  
[Status:Commtouch] [Start Date:2013-02-25 Expire Date:2013-03-27]

Authentication Message

**Note:** If you want to use email alert or syslog, please configure the [SysLog/Mail Alert Setup](#) page.  
If you change the service provider, the configuration of the function will be reset.

## 4.18 Diagnostics

Diagnostic Tools provide a useful way to **view** or **diagnose** the status of your Vigor router.

Below shows the menu items for Diagnostics.

**Diagnostics**  
Dial-out Triggering  
Routing Table  
ARP Cache Table  
IPv6 Neighbour Table  
DHCP Table  
NAT Sessions Table  
DNS Cache Table  
Ping Diagnosis  
Data Flow Monitor  
Traffic Graph  
Trace Route  
Syslog Explorer  
IPv6 TSPC Status

### 4.18.1 Dial-out Triggering

Click **Diagnostics** and click **Dial-out Triggering** to open the web page. The internet connection (e.g., PPPoE) is triggered by a package sending from the source IP address.

Diagnostics >> Dial-out Triggering

Dial-out Triggered Packet Header | Refresh

HEX Format:

00 00 00 00 00 00-00 00 00 00 00 00-00 00

00 00 00 00 00 00 00 00-00 00 00 00 00 00 00 00

00 00 00 00 00 00 00 00-00 00 00 00 00 00 00 00

00 00 00 00 00 00 00 00-00 00 00 00 00 00 00 00

00 00 00 00 00 00 00 00-00 00 00 00 00 00 00 00

Decoded Format:

0.0.0.0 -> 0.0.0.0

Pr 0 len 0 (0)

Available settings are explained as follows:

Item	Description
Decoded Format	It shows the source IP address (local), destination IP (remote) address, the protocol and length of the package.
Refresh	Click it to reload the page.

## 4.18.2 Routing Table

Click **Diagnostics** and click **Routing Table** to open the web page.

Diagnostics >> View Routing Table

Current Running Routing Table	IPv6 Routing Table	Refresh
Key: C - connected, S - static, R - RIP, * - default, ~ - private		
C~ 192.168.1.0/ 255.255.255.0 directly connected LAN1		

Diagnostics >> View Routing Table

Current Running Routing Table		IPv6 Routing Table		<a href="#">Refresh</a>
Destination	Interface	Flags	Metric	Next Hop
FE80::/64	LAN	U	256	
FF00::/8	LAN	U	256	

Available settings are explained as follows:

Item	Description
Refresh	Click it to reload the page.

### 4.18.3 ARP Cache Table

Click **Diagnostics** and click **ARP Cache Table** to view the content of the ARP (Address Resolution Protocol) cache held in the router. The table shows a mapping between an Ethernet hardware address (MAC Address) and an IP address.

**Diagnostics >> View ARP Cache Table**

Ethernet ARP Cache Table			
			Clear Refresh
IP Address	MAC Address	Netbios Name	Interface
192.168.1.100	00-05-5D-E4-D8-EE	A1000351	LAN1
<div>Show Comments</div>			

Available settings are explained as follows:

Item	Description
Refresh	Click it to reload the page.

#### 4.18.4 IPv6 Neighbour Table

The table shows a mapping between an Ethernet hardware address (MAC Address) and an IPv6 address. This information is helpful in diagnosing network problems, such as IP address conflicts, etc.

Click **Diagnostics** and click **IPv6 Neighbour Table** to open the web page.

[Diagnostics >> View IPv6 Neighbour Table](#)

IPv6 Neighbour Table			<a href="#">Refresh</a>
IPv6 Address	Mac Address	Interface	
FF02::2	33-33-00-00-00-02	LAN	
FF02::1:3	33-33-00-01-00-03	LAN	
FE80::3D5E:E74:8751:A44B	e8-9d-87-87-69-2f	LAN	
FF02::1:FF51:A44B	33-33-ff-51-a4-4b	LAN	
FE80::250:7FFF:FEC9:1E79	00-50-7f-c9-1e-79	LAN	
FE80::250:7FFF:FEC8:4305	00-50-7f-c8-43-05	LAN	
FF02::1	33-33-00-00-00-01	LAN	
FF02::1	00-00-00-00-00-00	USB2	
FF02::1:2	00-00-00-00-00-00	USB2	
FE80::9D5C:CA86:5428:3CA7	00-26-2d-fe-63-4f	LAN	
FF02::1:FF0A:673C	33-33-ff-0a-67-3c	LAN	

Available settings are explained as follows:

<b>MAC Address</b>	It displays the MAC address for the specified PC that DHCP assigned IP address for it.
<b>Leased Time</b>	It displays the leased time of the specified PC.
<b>HOST ID</b>	It displays the host ID name of the specified PC.
<b>Refresh</b>	Click it to reload the page.

#### 4.18.6 NAT Sessions Table

Click **Diagnostics** and click **NAT Sessions Table** to open the list page.

[Diagnostics >> NAT Sessions Table](#)

NAT Active Sessions Table [Refresh](#)

Private IP :Port	#Pseudo Port	Peer IP :Port	Interface
192.168.1.11 2491	52078	24.9.93.189 443	WAN1
192.168.1.11 2493	52080	207.46.25.2 80	WAN1
192.168.1.10 3079	52665	207.46.5.10 80	WAN1

Available settings are explained as follows:

Item	Description
<b>Private IP:Port</b>	It indicates the source IP address and port of local PC.
<b>#Pseudo Port</b>	It indicates the temporary port of the router used for NAT.
<b>Peer IP:Port</b>	It indicates the destination IP address and port of remote host.
<b>Interface</b>	It displays the representing number for different interface.
<b>Refresh</b>	Click it to reload the page.

## 4.18.7 DNS Cache Table

Click **Diagnostics** and click **DNS Cache Table** to pen the web page.

The record of domain Name and the mapping IP address for answering the DNS query from LAN will be stored on Vigor router's Cache temporarily and displayed on **Diagnostics >> DNS Cache Table**.

Diagnostics >> DNS Cache Table

IPv4 DNS Cache Table		IPv6 DNS Cache Table	<a href="#">Clear</a>   <a href="#">Refresh</a>
Domain Name	IP Address	TTL (s)	

**Note:** The LAN DNS entry's TTL is static.

☐ When an entry's TTL is larger than  s, this entry will be deleted from the table.

OK

Available settings are explained as follows:

Item	Description
<b>Clear</b>	Click this link to remove the result on the window.
<b>Refresh</b>	Click it to reload the page.
<b>When an entry's TTL is larger than....</b>	Check the box the type the value of TTL (time to live) for each entry. Click <b>OK</b> to enable such function. It means when the TTL value of each DNS query reaches the threshold of the value specified here, the corresponding record will be deleted from router's Cache automatically.

## 4.18.8 Ping Diagnosis

Click **Diagnostics** and click **Ping Diagnosis** to pen the web page.

Diagnostics >> Ping Diagnosis

### Ping Diagnosis

IPv4 IPv6

Ping to: Host / IP Host / IP DNS Gateway

IP Address:

Run

Result | Clear |

or

Diagnostics >> Ping Diagnosis

### Ping Diagnosis

IPv4 IPv6

Ping IPv6 Address:

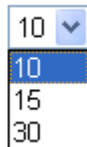

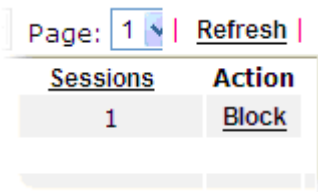

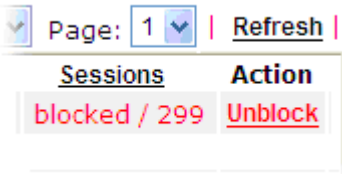

Run

Result | Clear |

Available settings are explained as follows:

Item	Description
<b>IPv4 /IPv6</b>	Choose the interface for such function.
<b>Ping through</b>	Use the drop down list to choose the WAN interface that you want to ping through or choose <b>Unspecified</b> to be determined by the router automatically.
<b>Ping to</b>	Use the drop down list to choose the destination that you want to ping.
<b>IP Address</b>	Type the IP address of the Host/IP that you want to ping.
<b>Ping IPv6 Address</b>	Type the IPv6 address that you want to ping.
<b>Run</b>	Click this button to start the ping work. The result will be

<b>Refresh Seconds</b>	<p>Use the drop down list to choose the time interval of refreshing data flow that will be done by the system automatically.</p> <p>Refresh Seconds: </p>
<b>Refresh</b>	Click this link to refresh this page manually.
<b>Index</b>	Display the number of the data flow.
<b>IP Address</b>	Display the IP address of the monitored device.
<b>TX rate (kbps)</b>	Display the transmission speed of the monitored device.
<b>RX rate (kbps)</b>	Display the receiving speed of the monitored device.
<b>Sessions</b>	Display the session number that you specified in Limit Session web page.
<b>Action</b>	<p><b>Block</b> - can prevent specified PC accessing into Internet within 5 minutes.</p>  <p><b>Unblock</b> – the device with the IP address will be blocked in five minutes. The remaining time will be shown on the session column.</p> 
<b>Current /Peak/Speed</b>	<p><b>Current</b> means current transmission rate and receiving rate for WAN interface.</p> <p><b>Peak</b> means the highest peak value detected by the router in data transmission.</p> <p><b>Speed</b> means line speed specified in <b>WAN&gt;&gt;General Setup</b>. If you do not specify any rate at that page, here will display <b>Auto</b> for instead.</p>

#### 4.18.10 Traffic Graph

Click **Diagnostics** and click **Traffic Graph** to pen the web page. Choose WAN1 Bandwidth, Sessions, daily or weekly for viewing different traffic graph. Click **Reset** to zero the accumulated RX/TX (received and transmitted) data of WAN. Click **Refresh** to renew the graph at any time.

Diagnostics >> Traffic Graph

The horizontal axis represents time. Yet the vertical axis has different meanings. For WAN1 Bandwidth chart, the numbers displayed on vertical axis represent the numbers of the transmitted and received packets in the past.

For Sessions chart, the numbers displayed on vertical axis represent the numbers of the NAT sessions during the past.

### 4.18.11 Trace Route

Click **Diagnostics** and click **Trace Route** to open the web page. This page allows you to trace the routes from router to the host. Simply type the IP address of the host in the box and click **Run**. The result of route trace will be shown on the screen.

Diagnostics >> Trace Route

**Trace Route**

☒ IPV4 ☐ IPV6  
Protocol: ICMP ▾  
Host / IP Address:

**Result** | [Clear](#) |

or

Diagnostics >> Trace Route

**Trace Route**

☐ IPV4 ☒ IPV6  
Trace Host / IP Address:

**Result** | [Clear](#) |

Available settings are explained as follows:

Item	Description
<b>IPv4 / IPv6</b>	Click one of them to display corresponding information for it.
<b>Trace through</b>	Use the drop down list to choose the interface that you want to ping through.
<b>Protocol</b>	Use the drop down list to choose the protocol that you want to ping through.

<b>Host/IP Address</b>	It indicates the IP address of the host.
<b>Trace Host/IP Address</b>	It indicates the IPv6 address of the host.
<b>Run</b>	Click this button to start route tracing work.
<b>Clear</b>	Click this link to remove the result on the window.

### 4.18.12 Syslog Explorer

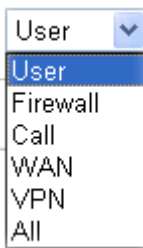

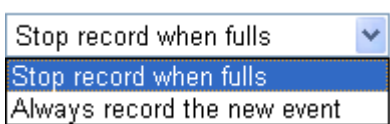

Such page provides real-time syslog and displays the information on the screen.

#### For Web Syslog

This page displays the time and message for User/Firewall/call/WAN/VPN settings. You can check **Enable Web Syslog**, specify the type of Syslog and choose the display mode you want. Later, the event of Syslog with specified type will be shown for your reference.

USB Application >> Syslog Explorer

Available settings are explained as follows:

Item	Description
<b>Enable Web Syslog</b>	Check this box to enable the function of Web Syslog.
<b>Syslog Type</b>	Use the drop down list to specify a type of Syslog to be displayed. 
<b>Export</b>	Click this link to save the data as a file.
<b>Refresh</b>	Click this link to refresh this page manually.
<b>Clear</b>	Click this link to clear information on this page.
<b>Display Mode</b>	There are two modes for you to choose.  <b>Stop record when fulls</b> – when the capacity of syslog is

	full, the system will stop recording. <b>Always record the new event</b> – only the newest events will be recorded by the system.
<b>Time</b>	Display the time of the event occurred.
<b>Message</b>	Display the information for each event.

### For USB Syslog

This page displays the syslog recorded on the USB storage disk.

[USB Application >> Syslog Explorer](#)

Web Syslog	USB Syslog
------------	------------

Note: The syslog will show while the saved syslog file size is over 1MB.

Folder: n/a File: n/a Page: n/a Log Type: n/a

Time	Log Type	Message
------	----------	---------

Available settings are explained as follows:

Item	Description
<b>Time</b>	Display the time of the event occurred.
<b>Log Type</b>	Display the type of the record.
<b>Message</b>	Display the information for each event.

### 4.18.13 IPv6 TSPC Status

IPv6 TSPC status web page could help you to diagnose the connection status of TSPC.

If TSPC has configured properly, the router will display the following page when the user connects to tunnel broker successfully.

[Diagnostics >> IPv6 TSPC Status](#)

WAN1	WAN2	WAN3	WAN4	<a href="#">Refresh</a>
TSPC Enabled TSPC Connection Status Local Endpoint v4 Address : 114.44.54.220 Local Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b9 Router DNS name : 88886666.broker.freenet6.net Remote Endpoint v4 Address : 81.171.72.11 Remote Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b8 Tspc Prefix : 2001:05c0:1502:0d00:0000:0000:0000:0000 Tspc Prefixlen : 56 Tunnel Broker : amsterdam.freenet6.net Tunnel Status : <span style="color: green;">Connected</span>				

Available settings are explained as follows:

Item	Description
<b>Refresh</b>	Click this link to refresh this page manually.

## 4.19 External Devices

Vigor router can be used to connect with many types of external devices. In order to control or manage the external devices conveniently, open **External Devices** to make detailed configuration.

### External Devices

☒ External Device Auto Discovery

#### External Devices Connected

| [Refresh](#) |

Below shows available devices that connected externally:

**On Line** Vigor2960, Connection Uptime: 18:03:36

IP Address: 172.16.3.134

[Account](#)

[Clear](#)

**Off Line** VigorSwitch G2240, Connection Uptime: 19:30:16

The device may have been powered off, Please clear the status.

[Account](#)

[Clear](#)

#### For security reason:

If you have changed the administrator password on External Device, please click the **Account** button to retype new username and password. Otherwise, the router will be unable to monitor the External Device properly. Click the **Clear** button to Clear the off-line information and account information.

[OK](#)

Available settings are explained as follows:

Item	Description
<b>External Device Auto Discovery</b>	Check this box to detect the external device automatically and display on this page.

From this web page, check the box of **External Device Auto Discovery**. Later, all the available devices will be displayed in this page with icons and corresponding information. You can change the device name if required or remove the information for off-line device whenever you want.

When you finished the configuration, click **OK** to save it.

**Note:** Only DrayTek products can be detected by this function.

# 5

## Trouble Shooting

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer for advanced help.

### 5.1 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections.  
Refer to “**1.3 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**1.3 Hardware Installation**” to execute the hardware installation again. And then, try again.

## 5.2 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

### For Windows

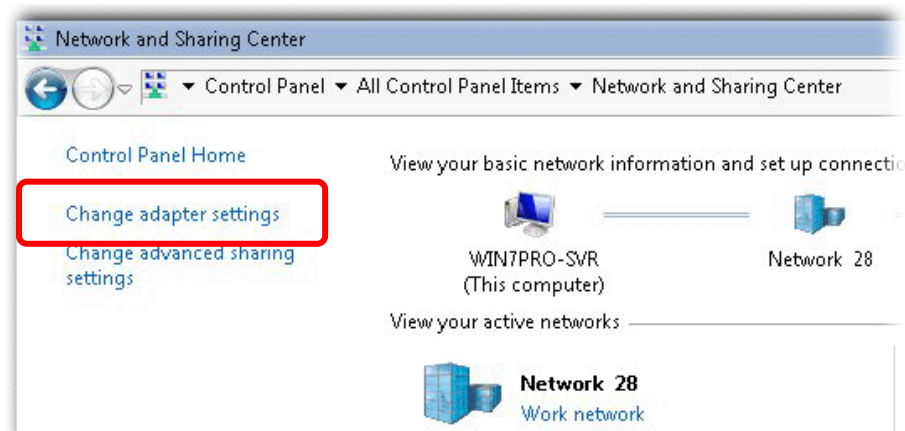

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in [www.DrayTek.com](http://www.DrayTek.com).

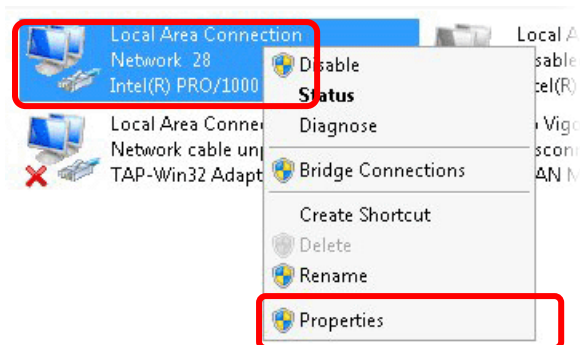

1. Open **All Programs>>Getting Started>>Control Panel**. Click **Network and Sharing Center**.

2. In the following window, click **Change adapter settings**.

3. Icons of network connection will be shown on the window. Right-click on **Local Area Connection** and click on **Properties**.

4. Select **Internet Protocol Version 4 (TCP/IP)** and then click **Properties**.

5. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**. Finally, click **OK**.

## For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

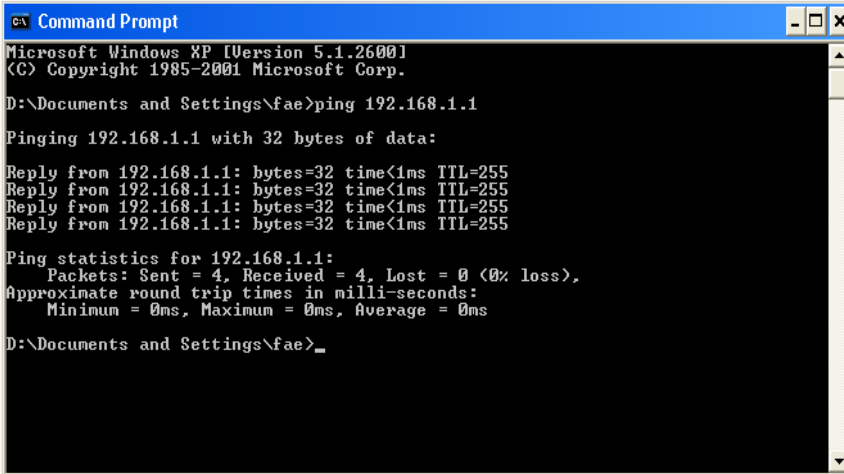

## 5.3 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the section 5.2)

Please follow the steps below to ping the router correctly.

### For Windows

1. Open the **Command Prompt** window (from **Start menu> Run**).
2. Type **command** (for Windows 95/98/ME) or **cmd** (for Windows NT/ 2000/XP/Vista/7). The DOS command dialog will appear.

```

C:\ Command Prompt
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_

```

3. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“Reply from 192.168.1.1:bytes=32 time<1ms TTL=255”** will appear.
4. If the line does not appear, please check the IP address setting of your computer.

### For Mac OS (Terminal)

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Type **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“64 bytes from 192.168.1.1: icmp\_seq=0 ttl=255 time=xxxx ms”** will appear.

```

Advanced You can configure DHCP client boot

## 5.5 Problems for 3G Network Connection

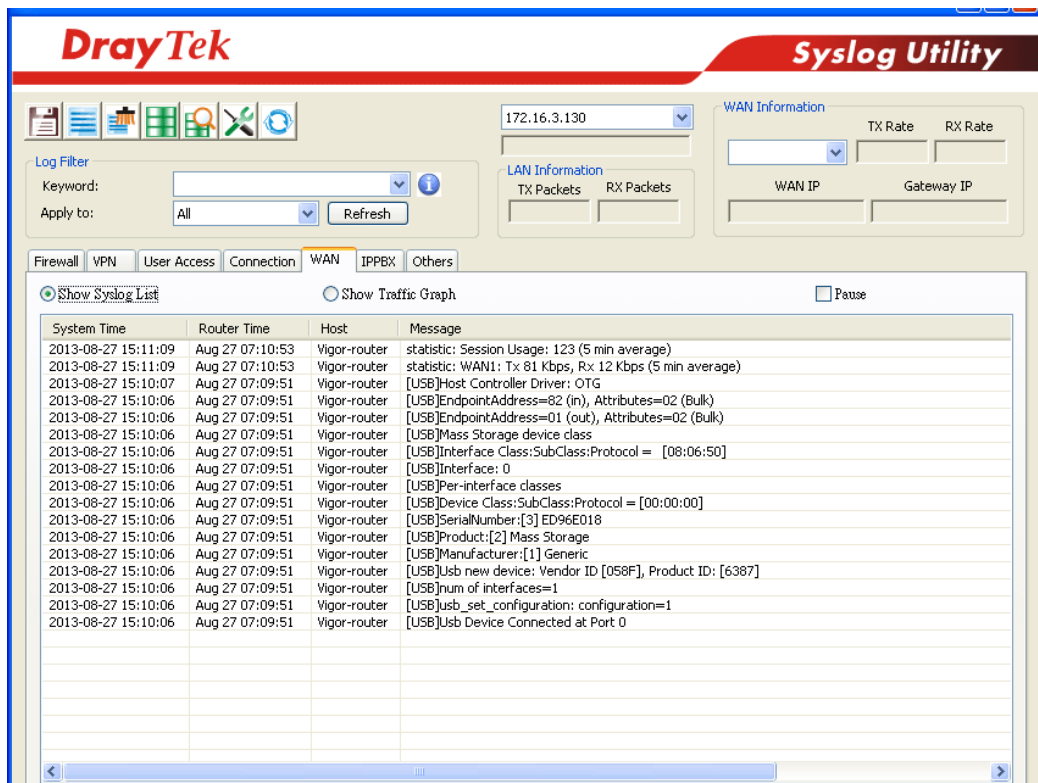

When you have trouble in using 3G network transmission, please check the following:

### Check if USB LED lights on or off

You have to wait about 15 seconds after inserting 3G USB Modem into your Vigor2132FVn. Later, the USB LED will light on which means the installation of USB Modem is successful. If the USB LED does not light on, please remove and reinsert the modem again. If it still fails, restart Vigor2132FVn.

### USB LED lights on but the network connection does not work

Check the PIN Code of SIM card is disabled or not. Please use the utility of 3G USB Modem to disable PIN code and try again. If it still fails, it might be the compliance problem of system. Please open DrayTek Syslog Tool to capture the connection information (WAN Log) and send the page (similar to the following graphic) to the service center of DrayTek.

## Transmission Rate is not fast enough

Please connect your Notebook with 3G USB Modem to test the connection speed to verify if the problem is caused by Vigor2132FVn. In addition, please refer to the manual of 3G USB Modem for LED Status to make sure if the modem connects to Internet via HSDPA mode. If you want to use the modem indoors, please put it on the place near the window to obtain better signal receiving.

## 5.6 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

**Warning:** After pressing **factory default setting**, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing.

### Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

## Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration  
☐ Using factory default configuration

## Auto Reboot Time Schedule

Index(1-15) in Schedule Setup: , , , 

Note: Action and Idle Timeout settings will be ignored.

## Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

## 5.7 Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to [support@draytek.com](mailto:support@draytek.com).
